ANCIENT ACHIEVEMENTS.

CONTENTS.

GOVERNMENTS AND LAWS.

GREEK AND ROMAN JURISPRUDENCE.

	PAGE
Governments and laws	23
Oriental laws	24
Priestly jurisprudence	25
The laws of Lycurgus	27
The laws of Solon	28
Cleisthenes	32
The Ecclesia at Athens	32
Struggle between patricians and plebeians at Rome . . .	33
Tribunes of the people	34
Roman citizens	35
The Roman senate	35
The Roman constitution	38
Imperial power	39
The Twelve Tables	40
Roman lawyers	41
Jurisprudence under emperors	42
Labeo	44
Capito	44
Gaius	44
Paulus	45
Ulpian	45
Justinian	48
Tribonian	48

	PAGE
Code, Pandects, and Institutes	49
Roman citizenship	53
Laws pertaining to marriage	55
Extent of paternal power	57
Transfer of property	59
Contracts	61
The courts	64
Crimes	68
Fines	69
Penal statutes	72
Personal rights	74
Slavery	75
Security of property	77

CICERO.

ROMAN LITERATURE.

	PAGE
Condition of Roman society when Cicero was born . . .	275
His education and precocity	276
He adopts the profession of the law	277
His popularity as an orator	278
Elected Quæstor; his Ædileship	279
Prosecution of Verres	280
His letters to Atticus; his vanity	281
His Prætorship; declines a province	282
His Consulship; conspiracy of Catiline	283-285
Banishment of Cicero: his weakness; his recall . . .	286-289
His law practice; his eloquence	290
His provincial government	291
His return to Rome	291
His fears in view of the rivalry between Cæsar and Pompey	292
Sides with Pompey	292
Death of Tullia and divorce of Terentia	293
Second marriage of Cicero	293
Literary labors: his philosophical writings	294
His detestation of Imperialism	295
His philippics against Antony	296
His proscription, flight, and death	297, 298
His great services	299
Character of his eloquence	300
His artistic excellence of style	300
His learning and attainments; his character	301-305
His immortal legacy	306

CLEOPATRA.

THE WOMAN OF PAGANISM.

	PAGE
Why Cleopatra represents the woman of Paganism . . .	311
Glory of Ancient Rome	312
Paganism recognizes the body rather than the soul . .	312
Ancestors of Cleopatra	313
The wonders of Alexandria	313
Cleopatra of Greek origin	314
The mysteries of Ancient Egypt	314
Early beauty and accomplishments of Cleopatra	315
Her attractions to Cæsar	315
Her residence in Rome	316
Her first acquaintance with Antony	316
The style of her beauty	317
Her character	318
Character of Antony	319
Antony and Cleopatra in Cilicia	320
Magnificence of Cleopatra	321
Infatuation of Antony	322
Motives of Cleopatra	323
Antony's gifts to Cleopatra	324
Indignation of the Romans	325
Antony gives up his Parthian expedition	325
Returns to Alexandria	325
Contest with Octavius	326
Battle of Actium	326
Wisdom of Octavius	327
Death of Antony	328
Subsequent conduct of Cleopatra	330
Nature of her love for Antony	331
Immense sacrifices of Antony	332

	PAGE
Tragic fate of Cleopatra	333
Frequency of suicide at Rome	334
Immorality no bar to social position in Greece and Rome .	335
Dulness of home in Pagan antiquity	336
Drudgeries of women	336
Influence of women on men	337
Paganism never recognized the equality of women with men	338
It denied to them education	339
Consequent degradation of women	339
Paganism without religious consolation	340
Did not recognize the value of the soul	341
And thus took no cognizance of the higher aspirations of man	342
The revenge of woman under degradation	344
Women, under Paganism, took no interest in what elevates society	344
Men, therefore, fled to public amusements	345
No true society under Paganism	346
Society only created by Christianity	347

PAGAN SOCIETY.

GLORY AND SHAME.

Glories of the ancient civilization	351
A splendid external deception	351
Moral evils	352
Imperial despotism	352
Prostration of liberties	353
Some good emperors	355
Disproportionate fortunes	356
Luxurious living	359

GOVERNMENTS AND LAWS.

GREEK AND ROMAN JURISPRUDENCE.

624 P. C.-550 A. D.

OF

AND

BEACON LIGHTS OF HISTORY.

GOVERNMENTS AND LAWS.

GREEK AND ROMAN JURISPRUDENCE.

THERE is not much in ancient governments and laws to interest us, except such as were in harmony with natural justice, and were designed for the welfare of all classes in the State. A jurisprudence founded on the edicts of absolute kings, or on the regulations of a priestly caste, is necessarily partial, and may be unenlightened. But those laws which are gradually enacted for the interests of the whole body of the people,—for the rich and poor, the powerful and feeble alike,—have generally been the result of great and diverse experiences, running through centuries, the work of wise men under constitutional forms of government. The jurisprudence of nations based on equity is a growth or development according to public wants and necessities, especially in countries having popular liberty and rights, as in England and the United States.

We do not find in the history of ancient nations such a jurisprudence, except in the free States of Greece and among the Romans, who had a natural genius or aptitude for government, and where the people had a powerful influence in legislation, until even the name of liberty was not invoked.

Among the Egyptians, Assyrians, and Babylonians the only laws were the edicts of kings or the regulations of priests, mostly made with a view of cementing their own power, except those that were dictated by benevolence or the pressing needs of the people, who were ground down and oppressed, and protected only as slaves were once protected in the Southern States of America. Wise and good monarchs doubtless issued decrees for the benefit of all classes, such as conscience or knowledge dictated, whenever they felt their great responsibilities, as in some of the absolute monarchies of Europe; but they never issued their decrees at the suggestions or demands of those classes for whom the laws were made. The voice of the people was ignored, except so far as it moved the pity or appealed to the hearts and consciences of their rulers; the people had, and claimed, no *rights*. The only men to whom rulers listened, or by whom they were controlled, were those whom they chose as counsellors and ministers, who were supposed to advise with a view to the sovereign's benefit, and that of the empire generally.

The same may be said in general of other Oriental monarchies, especially when embarked in aggressive wars, where the will of the monarch was supreme and unresisted, as in Persia. In India and China the government was not so absolute, since it was checked by feudatory princes, almost independent, like the feudal barons and dukes of mediæval Europe.

Nor was there probably among Oriental nations any elaborate codification of the decrees and laws as in Greece and Rome, except by the priests for their ritual service, like that which marked the jurisprudence of the Israelites. There were laws against murder, theft, adultery, and other offences, since society cannot exist anywhere without such laws; but there was no complicated jurisprudence produced by the friction of competing classes striving for justice and right, or even for the interests of contending parties. We do not look to Egypt or to China for wise punishment of ordinary crimes; but we do look to Greece and Rome, and to Rome especially, for a legislation which shall balance the complicated relations of society on principles of enlightened reason. Moreover, those great popular rights which we now most zealously defend have generally been extorted in the strife of classes and parties, sometimes from kings, and sometimes from princes and nobles. Where there has been no opposition to absolutism these rights have not been secured; but

whenever and wherever the people have been a power they have imperiously made their wants known, and so far as they have been reasonable they have been finally secured,—perhaps after angry expostulations and disputations.

Now, it is this kind of legislation which is remarkable in the history of Greece and Rome, secured by a combination of the people against the ruling classes in the interests of justice and the common welfare, and finally endorsed and upheld even by monarchs themselves. It is from this legislation that modern nations have learned wisdom ; for a permanent law in a free country may be the result of a hundred years of discussion or contention,—a compromise of parties, a lesson in human experience. As the laws of Greece and Rome alone among the ancients are rich in moral wisdom and adapted more or less to all nations and ages in the struggle for equal rights and wise social regulations, I shall confine myself to them. Besides, I aim not to give useless and curious details, but to show how far in general the enlightened nations of antiquity made attainments in those things which we call civilization, and particularly in that great department which concerns so nearly all human interests,—that of the regulation of mutual social relations ; and this by modes and with results which have had their direct influence upon our modern times.

When we consider the native genius of the Greeks, and their marvellous achievements in philosophy, literature, and art, we are surprised that they were so inferior to the Romans in jurisprudence,—although in the early days of the Roman republic a deputation of citizens was sent to Athens to study the laws of Solon. But neither nations nor individuals are great in everything. Before Solon lived, Lycurgus had given laws to the Spartans. This lawgiver, one of the descendants of Hercules, was born, according to Grote, about eight hundred and eighty years before Christ, and was the uncle of the reigning king. There is, however, no certainty as to the time when he lived; it was probably about the period when Carthage was founded by the Phœnicians. He instituted the Spartan senate, and gave an aristocratic form to the constitution. But the senate, composed of about thirty old men who acted in conjunction with the two kings, did not differ materially from the council of chiefs, or old men, found in other ancient Grecian States; the Spartan chiefs simply modified or curtailed the power of the kings. In the course of time the senate, with the kings included in it, became the governing body of the State, and this oligarchical form of government lasted several hundred years. We know but little of the especial laws given by Lycurgus. We know the distinctions of society,—citizens and helots.

and their mutual relations, — the distribution of lands to check luxury, the public men, the public training of youth, the severe discipline to which all were subjected, the cruelty exercised towards slaves, the attention given to gymnastic exercises and athletic sports, — in short, the habits and customs of the people rather than any regular system of jurisprudence. Lycurgus was the trainer of a military brotherhood rather than a law-giver. Under his régime the citizen belonged to the State rather than to his family, and all the ends of the State were warlike rather than peaceful, — not looking to the settlement of quarrels on principles of equity, or a development of industrial interests, which are the great aims of modern legislation.

The influence of the Athenian Solon on the laws which affected individuals is more apparent than that of the Spartan Lycurgus, the earliest of the Grecian legislators. But Solon had a predecessor in Athens itself, — Draco, who in 624 was appointed to reduce to writing the arbitrary decisions of the archons, thus giving a form of permanent law and a basis for a court of appeal. Draco's laws were extraordinarily severe, punishing small thefts and even laziness with death. The formulation of any system of justice would have, as Draco's did, a beneficial influence on the growth of the State; but the severity of these bloody laws caused them to be hated and in practice neglected, until Solon

arose. Solon was born in Athens about 638 B. C., and belonged to the noblest family of the State. He was contemporary with Pisistratus and Thales. His father having lost his property, Solon applied himself to merchandise, — always a respectable calling in a mercantile city. He first became known as a writer of love poems; then came into prominence as a successful military commander of volunteer forces in a disastrous war; and at last he gained the confidence of his countrymen so completely that in a period of anarchy, distress, and mutiny, — the poor being so grievously oppressed by the rich that a sixth part of the produce of land went to the landlord, — he was chosen archon, with authority to revise the laws, and might have made himself king. He abolished the custom of selling the body of a debtor for debt, and even annulled debts in a state of general distress, — which did not please the rich, nor even the poor, since they desired a redivision of lands such as Lycurgus had made in Sparta. He repealed the severe laws of Draco, which inflicted capital punishment for so many small offences, retaining the extreme penalty only for murder and treason. In order further to promote the interests of the people, he empowered any man whatever to enter an action for one that was injured. He left the great offices of state, however, in the hands of the rich, giving the people a

share in those which were not so important. He re-established the council of the Areopagus, composed of those who had been archons, and nine were appointed annually for the general guardianship of the laws; but he instituted another court or senate of four hundred citizens, for the cognizance of all matters before they were submitted to the higher court. Although the poorest and most numerous class were not eligible for office, they had the right of suffrage, and could vote for the principal officers. It would at first seem that the legislation of Solon gave especial privileges to the rich, but it is generally understood that he was the founder of the democracy of Athens. He gave the Athenians, not the best possible code, but the best they were capable of receiving. He intended to give to the people as much power as was strictly needed, and no more; but in a free State the people continually encroach on the privileges of the rich, and thus gradually the chief power falls into their hands.

Whatever the power which Solon gave to the people, and however great their subsequent encroachments, it cannot be doubted that he was the first to lay the foundations of constitutional government,—that is, one in which the people took part in legislation and in the election of rulers. The greatest benefit which he conferred on the State was in the laws which gave relief

to poor debtors, those which enabled people to protect themselves by constitutional means, and those which prohibited fathers from selling their daughters and sisters for slaves, — an abomination which had long disgraced the Athenian republic.

Some of Solon's laws were of questionable utility. He prohibited the exportation of the fruits of the soil in Attica, with the exception of olive-oil alone, — a regulation difficult to be enforced in a mercantile State. Neither would he grant citizenship to immigrants; and he released sons from supporting their parents in old age if the parents had neglected to give them a trade. He encouraged all developments of national industries, knowing that the wealth of the State depended on them. Solon was the first Athenian legislator who granted the power of testamentary bequests when a man had no legitimate children. Sons succeeded to the property of their parents, with the obligation of giving a marriage dowry to their sisters. If there were no sons, the daughters inherited the property of their parents; but a person who had no children could bequeath his property to whom he pleased. Solon prohibited costly sacrifices at funerals; he forbade evil-speaking of the dead, and indeed of all persons before judges and archons; he pronounced a man infamous who took part in a sedition.

When this enlightened and disinterested man had finished his work of legislation, 494 B. C., he visited Egypt and Cyprus, and devoted his leisure to the composition of poems. He also, it is said, when a prisoner in the hands of the Persians, visited Croesus, the rich king of Lydia, and gave to him an admonitory lesson on the vicissitudes of life. After a prolonged absence, Solon returned to Athens about the time of the usurpation of his kinsman Peisistratus (560 B. C.), who, however, suffered the aged legislator and patriot to go unharmed, and even allowed most of his laws to remain in force.

The constitution and laws of Athens continued substantially for about a hundred years after the archonship of Solon, when the democratic party under Cleisthenes gained complete ascendancy. Some modification of the laws was then made. The political franchise was extended to all free native Athenians. The command of the military forces was given to ten generals, one from each tribe, instead of being intrusted to one of the archons. The Ecclesia, a formal assembly of the citizens, met more frequently. The people were called into direct action as *dikasts*, or jurors; all citizens were eligible to the magistracy, even to the archonship; ostracism, — which virtually was exile without disgrace, — became a political necessity to check the ascendancy of demagogues.

Such were the main features of the constitution and jurisprudence of Athens when the struggle between the patricians and plebeians of Rome began, to which we now give our attention. It was the real beginning of constitutional liberty in Rome. Before this time the government was in the hands either of kings or aristocrats. The patricians were descendants of the original Latin, Sabine, and Etruscan families; the plebeians were the throng of common folk brought in by conquest or later immigration, — mostly of Latin origin. The senate was the ruling power after the expulsion of the kings, and senators were selected from the great patrician families, who controlled by their wealth and influence the popular elections, the army and navy, and all foreign relations. Consuls the highest magistrates, who commanded the armies, were annually elected by the people; but for several centuries the consuls belonged to great families. The constitution was essentially aristocratic, and the aristocracy was based on wealth. Power was in the hands of nobles, whether their ancestors were patricians or plebeians, although in the early ages of the Republic they were mostly patricians by birth. But with the growth of Rome new families that were not descended from the ancient tribes became prominent, — like the Claudii, the Julii, and the Servilii, — and were incorporated with the nobility. There are very few

names in Roman history before the time of Marius which did not belong to this noble class. The *plebs*, or common people, had at first no political privileges whatever, not even the right of suffrage, and were not allowed to marry into patrician rank. Indeed, they were politically and socially oppressed.

The first great event which gave the plebs protection and political importance was the appointment of representatives called "tribunes of the people," — a privilege extorted from the patricians. The tribunes had the right to be present at the deliberations of the senate; their persons were inviolable, and they had the power of veto over obnoxious laws. Their power continually increased, until they were finally elected from the senatorial body. In 421 B. C. the plebs had gained sufficient influence to establish the *connubium*, by which they were allowed to intermarry with patricians. In the same year they were admitted to the quæstorship, which office entitled the possessor to a seat in the senate. The quæstors had charge of the public money. In 336 B. C. the plebeians obtained the prætorship, a judicial office.

In the year 286 B. C. the distinctions vanished between plebeians and patricians, and the term *populus* instead of *plebs*, was applied to all Roman people alike. Originally the *populus* comprised strictly Roman citizens, those who belonged to the original tribes, and

who had the right of suffrage. When the plebeians obtained access to the great offices of the state, the senate represented the whole people as it formerly represented the *populus*, and the term *populus* was enlarged to embrace the entire community.

The senate was an august body, and was very powerful. It was both judicial and legislative, and for several centuries was composed of patricians alone. Its members always belonged to the aristocracy, whether of patrician or plebeian descent, and were supposed to be rich. Under Augustus it required one million two hundred thousand sesterces annually to support the senatorial dignity. The senate, the members of which were chosen for life, had the superintendence of matters of religion and foreign relations; it commanded the levies of troops; it regulated duties and taxes; it gave audience to ambassadors; it determined upon the way that war should be conducted; it decreed to what provinces governors should be sent; it declared martial law in the appointment of dictators; and it decreed triumphs to fortunate generals. The senators, as a badge of distinction, wore upon their tunics a broad purple stripe, and they had the privilege of the best seats in the theatres. Their decisions were laws (*leges*). A large part of them had held curule offices, which entitled them to a seat in the senate for life. The curule officers were the

consuls, the prætors, the ædiles, the quæstors, the tribunes ; so that an able senator was sure of a great office in the course of his life. A man could scarcely be a senator unless he had held a great office, nor could he often have held a great office unless he were a senator. Thus it would seem that the Roman constitution for three hundred years after the expulsion of the kings was essentially aristocratic. The *plebs* had but small consideration till the time of the Gracchi.

But after the institution of tribunes a change in the constitution gradually took place, so that it was neither aristocratic nor popular exclusively, but was composed of both elements, and was a system of balance of power between the various classes. The more complete the balance of power, the closer is the resemblance to a constitutional government. When one class acted as a check against another class, as gradually came to pass, until the subversion of liberties by successful generals, the senate, the magistrates, and the people in their assemblies shared between them the political power, but the senate had a preponderating influence. The judicial, the legislative, and the executive authority was as well defined in Roman legislation as it is in English or American. No person was above the authority of the laws ; no one class could subvert the liberties and prerogatives

of another class,—even the senate could not override the constitution. The consuls, elected by the centuries, presided over the senate and over the assemblies of the people. There was no absolute power exercised at Rome until the subversion of the constitution, except by dictators chosen by the senate in times of imminent danger. Nor could senators elect members of their own body; the censors alone had the right of electing from the ex-magistrates, and of excluding such as were unworthy. The consuls could remain in office but a year, and could be called to account when their terms of office had expired. The tribunes of the people ultimately could prevent a consul from convening the senate, could seize a consul and imprison him, and could veto an ordinance of the senate itself. The nobles had no exclusive privilege like the feudal aristocracy of mediæval Europe, although it was their aim to secure the high magistracies to the members of their own body. The term *nobilitas* implied that some one of a man's ancestors had filled a curule magistracy. A patrician, long before the reforms of the Gracchi, had become a man of secondary importance, but the nobles were aristocrats to the close of the republic, and continued to secure the highest offices; they prevented their own extinction by admitting into their ranks those who distinguished themselves,—that is, exercis-

ing their influence in the popular elections to secure the magistracies from among themselves.

The Roman constitution then, as gradually developed by the necessities and crises that arose, which I have not space to mention, was a wonderful monument of human wisdom. The nobility were very powerful from their wealth and influence, but the people were not ground down. There were no oppressive laws to reduce them to practical slavery; what rights they gained they retained. They constantly extorted new privileges, until they were sufficiently powerful to be courted by demagogues. It was the demagogues, generally aristocratic ones, like Catiline and Cæsar, who subverted the liberties of the people by buying votes. But for nearly five hundred years not a man arose whom the Roman people feared, and the proud symbol "SPQR," on the standards of the armies of the republic, bore the name of the Roman Senate and People to the ends of the earth.

When, however, the senate came to be made up of men whom the great generals selected; when the tribunes played into the hands of the very men they were created to oppose; when the high-priest of a people, originally religious, was chosen politically and without regard to moral or religious consideration; when aristocratic nobles left their own ranks to steal the few offices which the people controlled, — then the

constitution, under which the Romans had advanced to the conquest of the world, became subverted, and the empire was a consolidated despotism.

Under the emperors there was no constitution, since they combined in their own persons all the great offices of state, and controlled the senate, the army, the tribunals of the law, the distant provinces, the city itself, and regulated taxes and imposed burdens as they pleased. The senate lost its independence, the courts their justice, the army its spirit, and the people their hopes. And yet the old forms remained; the senate met as in the days of the Gracchi, and there were consuls and prætors as before.

However much we may deplore the subversion of the Roman constitution and the absolute reign of the emperors, in which most historians see a political necessity, there was yet under these emperors, whether good or bad, the reign of law, the bequest of five hundred years' experience. The emperors reigned despotically, but under the forms of legislation. Nor did they attempt to subvert laws which did not interfere with their own political power. What is called jurisprudence they even improved, as that later imperial despot Napoleon gave a code to the nation he ruled. It is this science of jurisprudence, for which the Romans had a genius, that gives them their highest claim to be ranked among the benefactors of

mankind. They created legal science. Its aim was justice, — equity in the relations between man and man. This was the pride of the Roman world, even under the rule of tyrants and madmen, and this has survived all the calamities of fifteen hundred years. The Roman laws — founded by the Republic, but symmetrically completed by the Empire — have more powerfully affected the interests of civilization than have the philosophy and arts of Greece. Roman jurisprudence was not perfectly developed until five hundred years after the Christian era, when Justinian consolidated it into the Code, the Pandects, and the Institutes. The classical jurists, like Gaius, Ulpian, and Paulus, may have laid the foundation, but the superstructure was raised under the auspices of the imperial despots.

The earliest code of Roman laws was called the Twelve Tables, framed from the report of the commissioners sent to Athens and other Greek States, to collect what was most useful in their legal systems. The laws of the Twelve Tables were the basis of all the Roman laws, civil and religious. But the edicts of the prætors, who were the great equity judges as well as the common-law magistrates, proclaimed certain changes which custom and the practice of the courts had introduced; and these, added to the *leges populi*, or laws proposed by the consul and passed by the

centuries, the *plebiscita*, or laws proposed by the tribunes and passed by the tribes, and the *senatus consulta*, or decrees of the senate, gradually swelled the laws to a great number. Three thousand engraved plates of brass containing these various laws were deposited in the capitol.

Subtleties and fictions were in the course of litigations introduced by the lawyers to defeat the written statutes, and jurisprudence became complicated as early as the time of Cicero. Even the opinions of eminent lawyers were adopted by the legal profession as authoritative, and were recognized by the courts. The evils of a complicated jurisprudence were so evident in the seventh century of the city, that Q. Mucius Scævola, a great lawyer, when consul, published a scientific elaboration of the civil law. Cicero studied law under him, and his contemporaries, Varus and Ælius Gallus, wrote learned treatises, from which extracts appear in the Digest made under the Emperor Justinian, 528 A.D. Julius Cæsar contemplated a complete revision of the laws, but did not live long enough to carry out his intentions. His legislation, so far as he directed his mind to it, was very just. Among other laws established by him was one which ordained that creditors should accept lands as payment for their outstanding debts, according to the value determined by commissioners. In his time the relative value of money had

changed, and was greatly diminished. The most important law of Augustus, deserving of all praise, was that which related to the manumission of slaves; but he did not interfere with the social relations of the people after he had deprived them of political liberty. He once attempted, by his *Lex Julia*, to counteract the custom which then prevailed, of abstaining from legal marriage and substituting concubinage instead, by which the free population declined; but this attempt to improve the morals of the people met with such opposition from the tribes and centuries that the next emperor abolished popular assemblies altogether, which Augustus had feared to do. The senate in the time of the emperors, composed chiefly of lawyers and magistrates, and entirely dependent upon them, became the great fountain of law. By the original constitution the people were the source of power, and the senate merely gave or refused its approbation to the laws proposed; but under the emperors the *comitia*, or popular assemblies, disappeared, and the senate passed decrees which had the force of laws, subject to the veto of the Emperor. It was not until the time of Septimus Severus and Caracalla (second century A. D.) that the legislative action of the senate ceased, and the edicts and rescripts of emperors took the place of all legislation.

The golden age of Roman jurisprudence was from

the birth of Cicero to the reign of the Emperor Alexander Severus, 222 A. D.; before this period it was an occult science, confined to prætors, pontiffs, and patrician lawyers. But in the latter days of the republic law became the fashionable study of Roman youth, and eminent masters arose. The first great lawyer who left behind him important works was Q. Mucius Scævola, who wrote a treatise in eighteen books on the civil law. "He was," says Cicero, "the most eloquent of jurists and the most learned of orators." This work, George Long thinks, had a great influence on contemporaries and on subsequent jurists, who followed it as a model. It is the oldest work from which there are any excerpts in the Digest.

Servius Sulpicius, the friend of Cicero and his fellow-student in oratory, surpassed his teachers Balbus and Gallus, and was the equal in reputation of the great Mucius Scævola, the Pontifex Maximus, who said it was disgraceful for a patrician and a noble to be ignorant of the law with which he had to do. Cicero ascribes the great superiority of Servius as a lawyer to the study of philosophy, which disciplined and developed his mind, and enabled him to deduce his conclusions from his premises with logical precision. He left behind him one hundred and eighty treatises, and had numerous pupils, among whom A. Ofilius and Alfenus Varus, Cato, Julius Cæsar, Antony, and Cicero were

great lawyers. Labeo, in the time of Augustus, wrote four hundred books on jurisprudence, spending six months in the year in giving instruction to his pupils and in answering legal questions, and the other six months in the country in writing books. Like all the great Roman jurists, he was versed in literature and philosophy, and so devoted to his profession that he refused political office. His rival Capito was equally learned in all departments of the law, and left behind him as many treatises as Labeo. These two jurists were the founders of celebrated schools, like the ancient philosophers, and each had distinguished followers. Gaius, who flourished in the time of the Antonines, was a great legal authority; and the recent discovery of his Institutes has revealed the least mutilated fragment of Roman jurisprudence which exists, and one of the most valuable, which sheds great light on ancient Roman law; it was found in the library of Verona. No Roman jurist had a higher reputation than Papinian, who was præfectus prætorio under Septimius Severus (193 A. D.), — an office which made him second only to the Emperor, a sort of grand vizier, whose power extended over all departments of the State; he was beheaded by Caracalla. The great commentator Cujacius declares that he was the first of all lawyers who have been, or who are to be; that no one ever surpassed him in legal knowledge, and no one will ever

equal him. Paulus was his contemporary, and held the same office as Papinian. He was the most fertile of Roman law-writers, and there is more taken from him in Justinian's Digest than from any other jurist, except Ulpian. There are two thousand and eighty-three excerpts from this writer,—one sixth of the whole Digest. No legal writer, ancient or modern, has handled so many subjects. In perspicuity he is said to be inferior to Ulpian, one of the most famous of jurists, who was his contemporary. Ulpian has also exercised a great influence on modern jurisprudence from the copious extracts of his writings in the Digest. He was the chief adviser of Alexander Severus, and like Paulus was *præfectus prætorio*. The number of excerpts in the Digest from him is said to be two thousand four hundred and sixty-two, and they form a third part of it. Some fragments of his writings remain. The last of the great civilians associated with Gaius, Papinian, Paulus, and Ulpian, as oracles of jurisprudence, was Modestinus, who was a pupil of Ulpian. He wrote both in Greek and Latin. There are three hundred and forty-five excerpts in the Digest from his writings, the titles of which show the extent and variety of his labors.

These eminent lawyers shed great glory on the Roman civilization. In the earliest times men sought distinction on the fields of battle, but in the latter days of the

republic honor was conferred for forensic ability. The first pleaders of Rome were not jurisconsults, but aristocratic "patrons," who looked after their "clients," — men of lower social grade, who in return for protection and assistance rendered service, sometimes political by voting, sometimes pecuniary, sometimes military. But when law became complicated, a class of men arose to interpret it. These men were held in great honor, and reached by their services the highest offices, — like Cicero and Hortensius. No remuneration was given originally for forensic pleading beyond the services which the client gave to a patron, but gradually the practice of the law became lucrative. Hortensius, as well as Cicero, gained an immense fortune; he had several villas, a gallery of paintings, a large stock of wines, parks, fish-ponds, and aviaries. Cicero had villas in all parts of Italy, a house on the Palatine with columns of Numidian marble, and a fortune of twenty millions of sesterces, equal to eight hundred thousand dollars. Most of the great statesmen of Rome in the time of Cicero were either lawyers or generals. Crassus, Pompey, P. Sextus, M. Marcellus, P. Clodius, Asinius Pollio, C. Cicero, M. Antonius, Julius Cæsar, Cælius, Brutus, Catullus, were all celebrated for their forensic efforts. Candidates for the bar studied four years under a distinguished jurist, and were required to pass a rigorous examination. The

judges were chosen from members of the bar, as well as in later times the senators. The great lawyers were not only learned in the law, but possessed great accomplishments. Varro was a lawyer, and was the most learned man that Rome ever produced. But under the emperors the lawyers were chiefly distinguished for their legal attainments, like Paulus and Ulpian.

During this golden age of Roman jurisprudence many commentaries were written on the Twelve Tables, the Perpetual Edict, the Laws of the People, and the Decrees of the senate, as well as a vast mass of treatises on every department of the law, most of which have perished. The Institutes of Gaius, already mentioned, are the most valuable that remain, and have thrown great light on some important branches previously involved in obscurity. Their use in explaining the Institutes of Justinian is spoken of very highly by Mackenzie, since the latter are mainly founded on the long-lost work of Gaius. The great lawyers who flourished from Trajan to Alexander Severus, like Gaius, Ulpian, Paulus, Papinian, and Modestinus, had no successors who can be compared with them, and their works became standard authorities in the courts of law.

After the death of Alexander Severus, 235 A. D., no great accession was made to Roman law until Theodosius II., 438 A. D., caused the constitutions, from Constantine to his own time, to be collected and arranged

in sixteen books. This was called the Theodosian Code, which in the West was held in high esteem. It was very influential among the Germanic nations, serving as the chief basis of their early legislation; it also paved the way for the more complete codification that followed in the Justinian Code, which superseded it.

To Justinian belongs the immortal glory of reforming the jurisprudence of the Romans. "In the space of ten centuries," says Gibbon, "the infinite variety of laws and legal opinions had filled many thousand volumes, which no fortune could purchase, and no capacity could digest. Books could not easily be found, and the judges, poor in the midst of riches, were reduced to the exercise of their illiterate discretion." The emperors had very early begun to issue ordinances, under the authority of the various offices gathered into their hands; and these, together with the answers to appeals from the lower courts made to the emperors directly, or to the sort of supreme court which they established, were called *imperial constitutions* and *rescripts*. Justinian determined to unite in one body all the rules of law, whatever may have been their origin; and in the year 528 appointed ten jurisconsults, among whom was the celebrated Tribonian, to select and arrange the imperial constitutions and rescripts, leaving out what was obsolete or useless or contradictory, and to make such alterations as the circumstances required.

This was called the *Code*, divided into twelve books, and comprising the constitutions from Hadrian to Justinian. It was published in fourteen months after it was undertaken.

Justinian thereupon authorized Tribonian, then quæstor, *vir magnificus magisteria dignitate inter agentes decoratus*,—"for great titles were now given to the officers of the crown,"—to prepare, with the assistance of sixteen associates, a collection of extracts from the writings of the most eminent jurists, so as to form a body of law for the government of the empire, with power to select and omit and alter; and this immense work was done in three years, and published under the title of Digest, or Pandects. Says Lord Mackenzie :

"All the judicial learning of former times was laid under contribution by Tribonian and his colleagues. Selections from the works of thirty-nine of the ablest lawyers, scattered over two thousand separate treatises, were collected in one volume; and care was taken to inform posterity that three millions of lines were abridged and reduced in these extracts to the modest number of one hundred and fifty thousand. Among the selected jurists only three names belonged to the age of the republic,—the civilians who flourished under the first emperors are seldom appealed to; so that most of the writers whose works have contributed to the Pandects lived within a period of one hundred years. More than a third of the whole Pandects is from Ulpian, and next to

him the principal writers are Paulus, Papinian, Salvius Julianus, Pomponius, Q. Cervidius Scævola, and Gaius. Though the variety of subjects is immense, the Digest has no claims to scientific arrangement. It is a vast cyclopedia of heterogeneous law badly arranged ; everything is there, but everything is not in its proper place."

Neither the Digest nor the Code was adapted to elementary instruction ; it was therefore necessary to prepare a treatise on the principles of Roman law. This was intrusted to Tribonian and two professors, Theophilus and Dorotheus. It is probable that Tribonian merely superintended the work, which was founded chiefly on the Institutes of Gaius, divided into four books. It has been universally admired for its method and elegant precision. It was intended merely as an introduction to the Pandects and the Code, and was entitled the Institutes.

The *Novels*, or *New Constitutions*, of Justinian were subsequently published, being the new ordinances of the Emperor and the changes he thought proper to make, and were therefore of high authority. The Code, Pandects, Institutes, and Novels of Justinian comprise the Roman law as received in Europe, in the form given by the school of Bologna, and is called the "*Corpus Juris Civilis*." Savigny says : —

"It was in that form that the Roman law became the common law of Europe ; and when, four centuries later,

other sources came to be added to it, the *Corpus Juris* of the school of Bologna had been so universally received, and so long established as a basis of practice, that the new discoveries remained in the domain of science, and served only for the theory of the law. For the same reason, the Ante-Justinian law is excluded from practice."

After Justinian the old texts were left to moulder as useless though venerable, and they have nearly all disappeared. The Code, the Pandects, and the Institutes were declared to be the only legitimate authority, and alone were admitted to the tribunals or taught in the schools. The rescripts of the early emperors recognized too many popular rights to suit the despotic character of Justinian; and the older jurists, like the Scævolas, Sulpicius, and Labeo, were distasteful from their sympathy with free institutions. Different opinions have been expressed by the juriconsults as to the merits of the Justinian collection. By some it is regarded as a vast mass of legal lumber; by others, as a beautiful monument of human labor. After the lapse of so many centuries it is certain that a large portion of it is of no practical utility, since it is not applicable to modern wants. But again, no one doubts that it has exercised a great and good influence on moral and political science, and introduced many enlightened views concerning the administration of justice as well as the nature of civil government, and thus has modi-

fied the codes of the Teutonic nations that sprang up on the ruins of the old Roman world. It was used in the Greek empire until the fall of Constantinople. It never entirely lost authority in Italy, although it remained buried for centuries, till the discovery of the Florentine copy of the Pandects at the siege of Amalfi in 1135. Peter Valence, in the eleventh century, made use of it in a law-book which he published.

With the rise of the Italian cities, the study of Roman law revived, and Bologna became the seat from which it spread over Europe. In the sixteenth century the science of theoretical law passed from Italy to France, under the auspices of Francis I., when Cujas, or Cujacius, became the great ornament of the school of Bourges and the greatest commentator on Roman law until Dumoulin appeared. Grotius, in Holland, excited the same interest in civil law that Dumoulin did in France, followed by eminent professors in Leyden and the German universities. It was reserved for Pothier, in the middle of the eighteenth century, to reduce the Roman law to systematic order,—one of the most gigantic tasks that ever taxed the industry of man. The recent discoveries, especially that made by Niebuhr of the long-lost work of Gaius, have given a great impulse to the study of Roman law in Germany; and to this impulse no one has contributed so greatly as Savigny of Berlin.

The great importance of the subject demands a more minute notice of the principles of the Roman law than the limits of this work properly allow. I shall therefore endeavor to abridge what has been written by eminent authorities, taking as a basis the late work of Lord Mackenzie and the learned and interesting essay of Professor Maine.

The Institutes of Justinian began with the law of persons, recognizing the distinction of ranks. All persons are capable of enjoying civil rights, but not all in the same degree. Greater privileges are allowed to men than to women, to freemen than to slaves, to fathers than to children.

In the eye of the law all Roman citizens were equal wherever they lived, whether in the capital or the provinces. Citizenship embraced both political and civil rights. Political rights had reference to the right of voting in the comitia; but this was not considered the essence of citizenship, which was the enjoyment of the *connubium* and *commercium*. By the former the citizen could contract a valid marriage and acquire the rights resulting from it, particularly the paternal power; by the latter he could acquire and dispose of property. Citizenship was acquired by birth and by manumission; it was lost when a Roman became a prisoner of war, or had been exiled for crime, or became a citizen of another State. An unsullied reputa-

tion was required by law for a citizen to exercise his rights to their full extent.

The Roman jurists acknowledged all persons originally free by natural law; and while they recognized slavery, they ascribed the power of masters entirely to the law and custom of nations. Persons taken in war were considered at the absolute control of their captors, and were therefore, *de facto*, slaves; the children of a female slave followed the condition of their mother, and belonged to her master. But masters could manumit their slaves, who thus became Roman citizens with some restrictions. After the emancipation of a slave, he was bound to render certain services to his former master as patron, and if the freedman died intestate his property reverted to his patron.

Marriage was contracted by the simple consent of the parties, though in early times equality of condition was required. The *lex Canuleia*, A. U. C. 309, authorized connubium between patricians and plebeians, and the *lex Julia*, A. U. C. 757, allowed it between freedmen and freeborn. By the *conventio in manum*, a wife passed out of her family into that of her husband, who acquired all her property; without it, the woman remained in the power of her father, and retained the free disposition of her property. Polygamy was not permitted; and relationship within certain degrees

rendered the parties incapable of contracting marriage. (These rules as to forbidden degrees have been substantially adopted in England.) Celibacy was discouraged. Concubinage was allowed, if a man had not a wife, and provided the concubine was not the wife of another man; this heathenish custom was abrogated by Justinian. The wife was entitled to protection and support from her husband, and she retained her property independent of him. On her marriage the father gave his daughter a dowry in proportion to his means, the management of which, with its usufruct during marriage, belonged to the husband; but he could not alienate real estate without the wife's consent, and on the dissolution of marriage the *dos* reverted to the wife. Divorce existed in all ages at Rome, and was very common at the beginning of the empire; to check its prevalence, laws were passed inflicting severe penalties on those whose bad conduct led to it. Every man, whether married or not, could adopt children under certain restrictions, and they passed entirely under paternal power. But the marriage relation among the Romans did not accord after all with those principles of justice which we see in other parts of their legislative code. The Roman husband, like the father, was a tyrant. The facility of divorce destroyed mutual confidence, and inflamed every trifling dispute; for a word or a

message or a letter or the mandate of a freedman was quite sufficient to secure a separation. It was not until Christianity became the religion of the empire that divorce could not be easily effected without a just cause. This facility of divorce was a great stigma on the Roman laws, and the degradation of woman was the principal consequence. But woman never was honored in any Pagan land, although her condition at Rome was better than it was at Athens. She always was regarded as a possession rather than as a person; her virtue was mistrusted, and her aspirations were scorned; she was hampered and guarded more like a slave than the equal companion of man. But the progress of legislation, as a whole, was in her favor, and she continued to gain new privileges until the fall of the empire. The Roman Catholic Church regards marriage as one of the sacraments, and through all the Middle Ages and down to our own day the great authority of the Church has been one of the strongest supports of that institution, as necessary to Christianity as to civilization. We Americans have improved on the morality of Jesus, of the early and later Church, and of the great nations of modern Europe; and in many of our States persons are allowed to slip out of the marriage tie about as easily as they get into it.

Nothing is more remarkable in the Roman laws than the extent of paternal power. It was unjust, and bears the image of a barbarous age. Moreover, it seems to have been coeval with the foundation of the city. A father could chastise his children by stripes, by imprisonment, by exile, by sending them to the country with chains on their feet. He was even armed with the power of life and death. "Neither age nor rank," says Gibbon, "nor the consular office, could exempt the most illustrious citizen from the bonds of filial subjection. Without fear, though not without danger of abuse, the Roman legislators had reposed unbounded confidence in the sentiments of paternal love, and the oppression was tempered by the assurance that each generation must succeed in its turn to the awful dignity of parent and master." By an express law of the Twelve Tables a father could sell his children as slaves. But the abuse of paternal power was checked in the republic by the censors, and afterward by emperors. Alexander Severus limited the right of the father to simple correction, and Constantine declared the father who should kill his son to be guilty of murder. The rigor of parents in reference to the disposition of the property of children was also gradually relaxed. Under Augustus, the son could keep absolute possession of what he had acquired in war; under Constantine, he could retain any property acquired in the civil service,

and all property inherited from the mother could also be retained. In later times, a father could not give his son or daughter to another by adoption without their consent. Thus this *patria potestas* was gradually relaxed as civilization advanced, though it remained a peculiarity of Roman law to the latest times, and was severer than is ever seen in the modern world. Fathers were bound to maintain their children when they had no separate means to supply their wants, and children were also bound to maintain their parents if in want. These reciprocal duties, creditable to the Roman law-givers, are recognized in the French Code, but not in the English, which also recognizes the right of a father to bequeath his whole estate to strangers,—a thing which Roman fathers had not power to do. The age when children attained majority among the Romans was twenty-five years. Women were condemned to the perpetual tutelage of parents, husbands, or guardians, as it was supposed they never could attain to the age of reason and experience. The relation of guardian and ward was strictly observed by the Romans. They made a distinction between the right to govern a person and the right to manage his estate, although the tutor or guardian could do both. If the pupil was an infant, the tutor could act without the intervention of the pupil; if the pupil was above seven years of age, he was considered to have an imperfect

will. The youth ceased to be a pupil, if a boy, at fourteen; if a girl, at twelve. The tutor managed the estate of the pupil, but was liable for loss occasioned by bad management. He could sell movable property when expedient, but not real estate, without judicial authority. The tutor named by the father was preferred to all others.

The Institutes of Justinian pass from persons to things, or the law relating to real rights; in other words, that which pertains to property. Some things common to all, like air, light, the ocean, and things sacred, like temples and churches, are not classed as property.

Two things were required for the transfer of property, for it is the essence of property that the owner of a thing should have the right to transfer it, — first, the consent of the owner to transfer the thing upon some just ground; and secondly, the actual delivery of the thing to the person who is to acquire it. Movables were presumed to be the property of the possessors, until positive evidence was produced to the contrary. A prescriptive title to movables was acquired by possession for one year, and to immovables by possession for two years. Undisturbed possession for thirty years constituted in general a valid title.

When a Roman died, his heirs succeeded to all his property by hereditary right. If he left no will, his estate devolved upon his relatives in a certain order

prescribed by law. The power of making a testament only belonged to citizens above puberty. Children under the paternal power could not make a will. Males above fourteen and females above twelve, when not under power, could make wills without the authority of their guardian ; but pupils, lunatics, prisoners of war, criminals, and various other persons were incapable of making a testament. The testator could divide his property among his heirs in such proportions as he saw fit ; but if there was no distribution, all the heirs participated equally. A man could disinherit either of his children by declaring his intentions in his will, but only for grave reasons, — such as grievously injuring his person or character or feelings, or attempting his life. No will was effectual unless one or more persons were appointed heirs to represent the deceased. Wills were required to be signed by the testator, or some person for him, in the presence of seven witnesses who were Roman citizens. If a will was made by a parent for distributing his property solely among his children, no witnesses were required ; and the ordinary formalities were dispensed with among soldiers in actual service, and during the prevalence of pestilence. The testament was opened in the presence of the witnesses, or a majority of them ; and after they had acknowledged their seals a copy was made, and the original was deposited in the public archives.

According to the Twelve Tables, the powers of a testator in disposing of his property were unlimited; but in process of time, laws were enacted to restrain immoderate or unnatural bequests. By the Falcidian law, in the time of Augustus, no one could leave in legacies more than three fourths of his estate, so that the heirs could inherit at least one fourth. Again, a law was passed by which the descendants were entitled to one third of the succession, and to one half if there were more than four. In France, if a man die leaving one lawful child, he can dispose of only half his estate by will; if he leaves two children, he can dispose only of one third; if he leaves three or more children, then he can dispose by will of only one fourth of his estate. In England, a man can disinherit both his wife and children. These, and many other matters,—bequests in trust, succession of men dying intestate, heirs at law, etc.,—were regulated by the Romans in ways on which our modern legislators have improved little or none.

In the matter of contracts the Roman law was especially comprehensive, and the laws of France and Scotland are substantially based upon the Roman system. The Institutes of Gaius and Justinian distinguish four sorts of obligations,—*aut re, aut verbis, aut literis, aut consensu*. Gibbon, in his learned chapter, prefers to consider the specific obligations of men to

each other under promises, benefits, and injuries. Lord Mackenzie treats the subject in the order of the Institutes:—

“Obligations contracted *re* — by the intervention of *things* — are called by the moderns real contracts, because they are not perfected till something has passed from one party to another. Of this description are the contracts of loan, deposit, and pledge, — security for indebtedness. Till the subject is actually lent, deposited, or pledged, it does not form the special contract of loan, deposit, or pledge.”

Next to the perfection of contracts by *re*, — the intervention of things, — were obligations contracted by *verbis*, spoken words, and by *litteris*, or writings. The *verborum obligatio* was contracted by uttering certain words of formal style, — an interrogation being put by one party, and an answer given by the other. These stipulations were binding. In England all guarantees must be in writing.

The *obligatio litteris* was a written acknowledgment of debt, chiefly employed when money was borrowed; but the creditor could not sue upon a note within two years from its date, without being called upon also to prove that the money was in fact paid to the debtor.

Contracts perfected by consent, *consensu*, had reference to sale, hiring, partnership, and mandate, or orders to be carried out by agents. All contracts of sale were good without writing.

Acts which caused damage to another opened a new class of cases. The law obliged the wrong-doer to make reparation, and this responsibility extended to damages arising not only from positive acts, but from negligence or imprudence. In cases of libel or slander, the truth of the allegation might be pleaded in justification. In all cases it was necessary to show that an injury had been committed maliciously; but if damage arose in the exercise of a right, as killing a slave in self-defence, no claim for reparation could be maintained. If any one exercised a profession or trade for which he was not qualified, he was liable to all the damage his want of skill or knowledge might occasion, — a provision that some of our modern laws might advantageously revive. When any damage was done by a slave or an animal, the owner of the same was liable for the loss, though the mischief was done without his knowledge and against his will. If anything was thrown from a window giving on the public thoroughfare so as to injure any one by the fall, the occupier was bound to repair the damage, though done by a stranger. Legal claims might be transferred to a third person by sale, exchange, or donation; but to prevent speculators from purchasing debts at low prices, it was ordered that the assignee should not be entitled to exact from the debtor more than he himself had paid to acquire the debt, with interest. — a wise and just regulation.

By the ancient constitution, the king had the prerogative of determining civil causes. The right then devolved on the consuls, afterward on the prætor, and in certain cases on the curule and plebeian ediles, who were charged with the internal police of the city.

The prætor, a magistrate next in dignity to the consuls, acted as supreme judge of the civil courts, assisted by a council of jurisconsults to determine questions in law. At first one prætor was sufficient, but as the limits of the city and empire extended, he was joined by a colleague. After the conquest of Sicily, Sardinia, and the two Spains, new prætors were appointed to administer justice in the provinces. The prætor held his court in the comitium, wore a robe bordered with purple, sat in a curule chair, and was attended by lictors.

The prætor delegated his power to three classes of judges, called respectively *judex*, *arbiter*, and *recuperator*. When parties were at issue about facts, it was the custom for the prætor to fix the question of law upon which the action turned, and then to remit to a delegate, or judge, to inquire into the facts and pronounce judgment according to them. In the time of Augustus there were four thousand judices, who were merely private citizens, generally senators or men of consideration. The *judex* was invested by the magistrate with a judicial commission for a single case only. After being sworn to duty, he received from the prætor

a formula containing a summary of all the points under litigation, from which he was not allowed to depart. He was required not merely to investigate facts, but to give sentence ; and as law questions were more or less mixed up with the case, he was allowed to consult one or more jurisconsults. If the case was beyond his power to decide, he could decline to give judgment. The arbiter, like the *judex*, received a formula from the *prætor*, and seemed to have more extensive power. The *recuperators* heard and determined cases, but the number appointed for each case was usually three or five.

The *centumvirs* constituted a permanent tribunal composed of members annually elected, in equal numbers, from each tribe ; and this tribunal was presided over by the *prætor*, and divided into four chambers, which under the republic was placed under the ancient *quæstors*. The *centumvirs* decided questions of property, embracing a wide range of subjects. The Romans had no class of men like the judges of modern times ; the superior magistrates were changed annually, and political duties were mixed with judicial. The evil was partially remedied by the institution of legal assessors, selected from the most learned jurisconsults. Under the empire the *prætors* were greatly increased ; under Tiberius there were sixteen who administered justice, besides the consuls, six *ediles*, and ten *tribunes of the people*. The Emperor himself became the

supreme judge, and he was assisted in the discharge of his judicial duties by a council composed of the consuls, a magistrate of each grade, and fifteen senators. At first, the duties of the prætorian prefects were purely military, but finally they discharged important judicial functions. The prefect of the city, in the time of the emperors, was a great judicial personage, who heard appeals from the prætors themselves.

In all cases brought before the courts, the burden of proof was with the party asserting an affirmative fact. Proof by writing was generally considered most certain, but proof by witnesses was also admitted. Pupils, lunatics, infamous persons, interested parties, near relatives, and slaves could not bear evidence, nor any person who had a strong enmity against either party. The witnesses were required to give their testimony on oath. In most cases two witnesses were enough to prove a fact. When witnesses gave conflicting testimony, the judge regarded those who were most worthy of credit rather than those who were most numerous. In the English courts the custom used to be as with the Romans, of refusing testimony from those who were interested; but this has been removed. On the failure of regular proof, the Roman law allowed a party to refer the facts in a civil action to the oath of his adversary.

Under the Roman republic there was no appeal in

civil suits, but under the emperors a regular system was established. Under Augustus there was an appeal from all the magistrates to the prefect of the city, and from him to the prætorian prefect or even to the Emperor. In the provinces there was an appeal from the municipal magistrates to the governors, and from them to the Emperor, as Paul appealed from Festus to Cæsar. Under Justinian no appeal was allowed from a suit which did not involve at least twenty pounds in gold.

In regard to criminal courts among the Romans during the republic, the only body which had absolute power of life and death was the *comitia centuriata*. The senate had no jurisdiction in criminal cases, so far as Roman citizens were concerned. It was only in extraordinary emergencies that the senate, with the consuls, assumed the responsibility of inflicting summary punishment. Under the emperors, the senate was armed with the power of criminal jurisdiction; and as the senate was the tool of the imperator, he could crush whomsoever he pleased.

As it was inconvenient, when Rome had become a very great city, to convene the *comitia* for the trial of offenders, the expedient was adopted of delegating the jurisdiction of the people to persons invested with temporary authority, called *quæstors*. These were finally established into regular and permanent courts, called

quæstores perpetui. Every case submitted to these courts was tried by a judge and jury. It was the duty of the judge to preside and regulate proceedings according to law; and it was the duty of the jury, after hearing the evidence and pleadings, to decide on the guilt or innocence of the accused. As many as fifty persons frequently composed the jury, whose names were drawn out of an urn. Each party had a right to challenge a certain number, and the verdict was decided by a majority of votes. At first the judges were chosen from the senate, and afterward from the equestrians, and then again from both orders. But in process of time the *quæstores perpetui* gave place to imperial magistrates. The accused defended himself in person or by counsel.

The Romans divided *crimes* into public and private. Private crimes could be prosecuted only by the party injured, and were generally punished by pecuniary fines, as among the old Germanic nations.

Of public crimes the *crimen læsæ majestatis*, or treason, was regarded as the greatest; and this was punished with death and with confiscation of goods, while the memory of the offender was declared infamous. Greater severity could scarcely be visited on a culprit. Treason comprehended conspiracy against the government, assisting the enemies of Rome, and misconduct in the command of armies. Thus Manlius, in spite of

his magnificent services, was hurled from the Tarpeian Rock, because he was convicted of an intention to seize upon the government. Under the empire not only any attempt on the life of the Emperor was treason, but disrespectful words or acts. The criminal was even tried after death, that his memory might become infamous; and this barbarous practice was perpetuated in France and Scotland as late as the beginning of the seventeenth century. In England men have been executed for treasonable words. Besides treason there were other crimes against the State, such as a breach of the peace extortion on the part of provincial governors, embezzlement of public property, stealing sacred things, bribery, — most of which offences were punished by pecuniary penalties.

But there were also crimes against individuals, which were punished with the death penalty. Wilful murder, poisoning, and parricide were capitally punished. Adultery was punished by banishment, besides a forfeiture of considerable property; Constantine made it a capital offence. Rape was punished with death and confiscation of goods, as in England till a late period, when transportation for life became the penalty. The punishments inflicted for forgery, coining base money, and perjury were arbitrary. Robbery, theft, patrimonial damage, and injury to person and property were private trespasses, and not punished by the State.

After a lapse of twenty years without accusation, crimes were supposed to be extinguished. The Cornelian, Pompeian, and Julian laws formed the foundation of criminal jurisprudence. This however never attained the perfection that was seen in the Civil Code, in which the full maturity of Roman wisdom was reached. The emperors greatly increased the severity of punishments, as was probably necessary in a corrupt state of society. After the decemviral laws fell into disuse, the Romans in the days of the republic passed from extreme rigor to great lenity, as is observable in the transition from the Puritan régime to our own times in the United States. Capital punishment for several centuries was exceedingly rare, and was frequently prevented by voluntary exile. Under the empire, again, public executions were frequent and revolting.

Fines were a common mode of punishment with the Romans, as with the early Germans. Imprisonment in a public jail was rare, the custom of bail being in general use. Although retaliation was authorized by the Twelve Tables for bodily injuries, it was seldom exacted, since pecuniary compensation was taken in lieu. Corporal punishments were inflicted upon slaves, but rarely upon citizens, except for military crimes; but Roman citizens could be sold into slavery for various offences, chiefly military, and criminals were often con-

demned to labor in the mines or upon public works. Banishment was common, — *aquæ et ignis interdictio*; and this was equivalent to the deprivation of the necessities of life and incapacitating a person from exercising the rights of citizenship. Under the emperors persons were confined often on the rocky islands off the coast, or in a compulsory residence in a particular place assigned. Thus Chrysostom was sent to a dreary place on the banks of the Euxine, and Ovid was banished to Tomi. Death, when inflicted, was by hanging, scourging, and beheading; also by strangling in prison. Slaves were often crucified, and were compelled to carry their cross to the place of execution. This was the most ignominious and lingering of all deaths; it was abolished by Constantine, from reverence to the sacred symbol. Under the emperors, execution took place also by burning alive and exposure to wild beasts; it was thus the early Christians were tormented, since their offence was associated with treason. Persons of distinction were treated with more favor than the lower classes, and their punishments were less cruel and ignominious; thus Seneca, condemned for privity to treason, was allowed to choose his mode of death. The criminal laws of modern European States followed too often the barbarous custom of the Roman emperors until a recent date. Since the French Revolution the severity of the penal codes has been much modified

The penal statutes of Rome however, as Gibbon emphatically remarks, "formed a very small portion of the Code and the Pandects; and in all judicial proceedings the life or death of the citizen was determined with less caution and delay than the most ordinary question of covenant or inheritance." This was owing to the complicated relations of society, by which obligations are created or annulled, while duties to the State are explicit and well known, being inscribed not only on tables of brass, but on the conscience itself. It was natural, with the growth and development of commerce and dominion, that questions should arise which could not be ordinarily settled by ancient customs, and the practice of lawyers and the decisions of judges continually raised new difficulties, to be met only by new edicts. It is a pleasing fact to record, that jurisprudence became more just and enlightened as it became more intricate. The principles of equity were more regarded under the emperors than in the time of Cato. It is in the application of these principles that the laws of the Romans have obtained so high consideration; their abuse consisted in the expense of litigation, and the advantages which the rich thus obtained over the poor.

But if delays and forms led to an expensive and vexatious administration of justice, these were more than compensated by the checks which a complicated

jurisprudence gave to hasty or partial decisions. It was in the minuteness and precision of the forms of law, and in the foresight with which questions were anticipated in the various transactions of business, that the Romans in their civil and social relations were very much on a level with modern times. It would be difficult to find in the most enlightened of modern codes greater wisdom and foresight than appear in the legacy of Justinian as to all questions pertaining to the nature, the acquisition, the possession, the use, and the transfer of property. Civil obligations are most admirably defined, and all contracts are determined by the wisest application of the natural principles of justice. Nothing can be more enlightened than the laws which relate to leases, to sales, to partnerships, to damages, to pledges, to hiring of work, and to quasi-contracts. The laws pertaining to the succession to property, to the duties of guardians, to the rights of wards, to legacies, to bequests in trust, and to the general limitation of testamentary powers were singularly clear. The regulations in reference to intestate succession, and to the division of property among males and females, were wise and just; we find no laws of entail, no unequal rights, no absurd distinction between brothers, no peculiar privileges given to males over females, or to older sons. Particularly was everything pertaining to property and contracts and wills

guarded with the most jealous care. A man was sure of possessing his own, and of transmitting it to his children. In the Institutes of Justinian we see on every page a regard to the principles of natural justice: but moreover we find that malicious witnesses should be punished; that corrupt judges should be visited with severe penalties; that libels and satires should subject their authors to severe chastisement; that every culprit should be considered innocent until his guilt was proved.

No infringement on personal rights could be tolerated. A citizen was free to go where he pleased, to do whatsoever he would, if he did not trespass on the rights of another; to seek his pleasure unobstructed, and pursue his business without vexatious incumbrances. If he was injured or cheated, he was sure of redress; nor could he be easily defrauded with the sanction of the laws. A rigorous police guarded his person, his house, and his property; he was supreme and uncontrolled within his family. This security to property and life and personal rights was guaranteed by the greatest tyrants. Although political liberty was dead, the fullest personal liberty was enjoyed under the emperors, and it was under their sanction that jurisprudence in some of the most important departments of life reached perfection. If injustice was suffered it was not on account of the

laws, but owing to the depravity of men, the venality of the rich, and the tricks of lawyers; the laws were wise and equal. The civil jurisprudence of the Romans could be copied with safety by the most enlightened of European States; indeed, it is already the foundation of their civil codes, especially in France and Germany.

That there were some features in the Roman laws which we in these Christian times cannot indorse, and which we reprehend, cannot be denied. Under the republic there was not sufficient limit to paternal power, and the *pater familias* was necessarily a tyrant. It was unjust that the father should control the property of his son, and cruel that he was allowed an absolute control not only over his children, but also his wife. Yet the limits of paternal power were more and more curtailed, so that under the later emperors fathers were not allowed to have more authority than was perhaps expedient.

The recognition of slavery as a domestic institution was another blot, and slaves could be treated with the grossest cruelty and injustice without possibility of redress. But here the Romans were not sinners beyond all other nations, and our modern times have witnessed a parallel. It was not the existence of slavery, however, which was the greatest evil, but the facility by which slaves could be made. The laws pertaining

to debt were severe, and were most disgraceful in dooming a debtor to the absolute power of a creditor. To subject men of the same race to slavery for trifling debts which they could not discharge, was the great defect of the Roman laws. But even these cruel regulations were modified, so that in the corrupt times of the empire there was no greater practical severity than was common in England as late as one hundred years ago. The temptations to fraud were enormous in a wicked state of society, and demanded a severe remedy. It is possible that our modern laws may show too great leniency to debtors who are not merely unfortunate, but dishonest. The problem is not yet solved, whether men should be severely handled who are guilty of reckless and unprincipled speculations and unscrupulous dealings, or whether they should be allowed immunity to prosecute their dangerous and disgraceful courses.

Moreover, the penal code of the Romans in reference to breaches of trust or carelessness or ignorance, by which property was lost or squandered, may have been too severe, as is still the case in England in reference to hunting game on another's grounds. It was hard to doom a man to death who drove away his neighbor's cattle, or even entered in the night his neighbor's house; but severe penalties alone will keep men from crimes where there is a low state of virtue and religion.

and general prosperity and contentment become impossible where there is no efficient protection to property. Society was never more secure and happy in England than when vagabonds could be arrested, and when petty larcenies were visited with certain retribution. Every traveller in France and England feels that in regard to the punishment of crime, those older countries, restricted as are their political privileges, are in most questions of secure and comfortable living vastly superior to our own. The Romans lost under the emperors their political rights, but gained protection and safety in their relations with society. Where quiet and industrious citizens feel safe in their homes, are protected from scoundrels in their dealings, have ample scope for industrial enterprise, and are free to choose their private pleasures, they resign themselves to the loss of electing their rulers without great unhappiness. There are greater evils in the world than the deprivation of the elective franchise, lofty and glorious as is this privilege. The arbitrary rule of the emperors was fatal to political aspirations and rights and the growth of a genuine manhood; yet it is but fair to note that the evils of political slavery were qualified and set off by the excellence of the civil code and the privileges of social freedom.

The great practical evil connected with Roman jurisprudence was the intricacy and perplexity and uncer-

tainty of the laws, together with the expense involved in litigation. The class of lawyers was large, and their gains were extortionate. Justice was not always to be found on the side of right. The law was uncertain as well as costly. The most learned counsel could be employed only by the rich, and even judges were venal, so that the poor did not easily find adequate redress. But all this is the necessary attendant on a factitious state of society, and by many is regarded as being quite as characteristic of modern, civilized Christian England and America as it was of Pagan Rome. Material civilization leads to an undue estimate of money; and when money purchases all that artificial people desire, then all classes will prostitute themselves for its possession, and justice, dignity, and elevation of sentiment will be forced to retreat, — as hermits sought a solitude when society had reached its lowest degradation, out of pure despair of its renovation.

AUTHORITIES.

THE authorities for this chapter are very numerous. Since the Institutes of Gaius have been recovered, many eminent writers on Roman law have appeared, especially in Germany and France. Many might be cited, but for all ordinary purposes of historical

study the work of Lord Mackenzie on Roman Law, together with the articles of George Long in Smith's Dictionary, will be found most useful. Maine's Treatise on Ancient Law is exceedingly interesting and valuable. Gibbon's famous chapter should also be read by every student. There is a fine translation of the Institutes of Justinian, which is quite accessible, by Dr. Harris of Oxford. The Code, Pandects, Institutes, and Novels are of course the original authority, with the long-lost Institutes of Gaius.

In connection with the study of the Roman law, it would be well to read Sir George Bowyer's Commentaries on the Modern Civil Law. Also Irving, Introduction to the Study of the Civil Law; Lindley, Introduction to the Study of Jurisprudence; Wheaton's Elements of International Law; and Vattel, *Le Droit des Gens*.

THE FINE ARTS.

ARCHITECTURE, SCULPTURE, PAINTING.

500-430 B. C.

THE FINE ARTS.

ARCHITECTURE, SCULPTURE, PAINTING.

MY object in the present lecture is not a criticism of the principles of art so much as an enumeration of its various forms among the ancients, to show that in this department of civilization they reached remarkable perfection, and were not inferior to modern Christian nations.

The first development of art among all the nations of antiquity was in architecture. The earliest buildings erected were houses to protect people from heat, cold, and the fury of the elements of Nature. At that remote period much more attention was given to convenience and practical utility than to beauty or architectural effect. The earliest houses were built of wood, and stone was not employed until temples and palaces arose. Ordinary houses were probably not much better than log-huts and hovels, until wealth was accumulated by private persons.

The earliest monuments of enduring magnificence were the temples of powerful priests and the palaces of kings; and in Egypt and Assyria these appear earliest, as well as most other works showing civilization. Perhaps the first great monument which arose after the deluge of Noah was the Tower of Babel, built probably of brick. It was intended to be very lofty, but of its actual height we know nothing, nor of its style of architecture. Indeed, we do not know that it was ever advanced beyond its foundations; yet there are some grounds for supposing that it was ultimately finished, and became the principal temple of the Chaldaean metropolis.

From the ruins of ancient monuments we conclude that architecture received its earliest development in Egypt, and that its effects were imposing, massive, and grand. It was chiefly directed to the erection of palaces and temples, the ruins of which attest grandeur and vastness. They were built of stone, in blocks so huge and heavy that even modern engineers are at loss to comprehend how they could have been transported and erected. All the monuments of the Pharaohs are wonders, especially such as appear in the ruins of Karnak, — a temple formerly designated as that of Jupiter Ammon. It was in the time of Sesostris, or Rameses the Great, the first of the Pharaohs of the nineteenth dynasty, that

architecture in Egypt reached its greatest development. Then we find the rectangular-cut blocks of stone in parallel courses, the heavy pier, the cylindrical column with its bell-shaped capital, and the bold and massive rectangular architraves extending from pier to pier and column to column, surmounted by a deep covered coping or cornice.

The imposing architecture of Egypt was chiefly owing to the impressive vastness of the public buildings. It was not produced by beauty of proportion or graceful embellishments; it was designed to awe the people, and kindle sentiments of wonder and astonishment. So far as this end was contemplated it was nobly reached; even to this day the traveller stands in admiring amazement before those monuments that were old three thousand years ago. No structures have been so enduring as the Pyramids; no ruins are more extensive and majestic than those of Thebes. The temple of Karnak and the palace of Rameses the Great were probably the most imposing ever built by man. This temple was built of blocks of stone seventy feet in length, on a platform one thousand feet long and three hundred wide, with pillars sixty feet in height. But this and other structures did not possess that unity of design which marked the Grecian temples. Alleys of colossal sphinxes formed the approach. At Karnak the alley

was six thousand feet long, and before the main body of the edifice stood two obelisks commemorative of the dedication. The principal structures of Egyptian temples do not follow the straight line, but begin with pyramidal towers which flank the gateways; then follow, usually, a court surrounded with colonnades, subordinate temples, and houses for the priests. A second pylon, or pyramidal tower, leads to the interior and most considerable part of the temple,—a portico inclosed with walls, which receives light only through the entablature or openings in the roof. Adjoining this is the cella of the temple, without columns, enclosed by several walls, often divided into various small chambers with monolithic receptacles for idols or mummies or animals. The columns stand within the walls. The colonnade is not, as among the Greeks, an expansion of the temple; it is merely the wall with apertures. The walls, composed of square blocks, are perpendicular only on the inside, and bevelled externally, so that the thickness at the bottom sometimes amounts to twenty-four feet; thus the whole building assumes a pyramidal form, the fundamental principle of Egyptian architecture. The columns are more slender than the early Doric, are placed close together, and have bases of circular plinths; the shaft diminishes upward, and is ornamented with perpendicular or oblique furrows, but not fluted like Grecian columns. The

capitals are of the bell form, ornamented with all kinds of foliage, and have a narrow but high abacus. They abound with sculptured decorations, the designs of which were borrowed from the vegetation of the country. The highest of the columns of the temple of Luxor is five and a quarter times the greatest diameter.

But no monuments have ever excited so much curiosity and wonder as the Pyramids, not in consequence of any particular beauty or ingenuity in their construction, but because of their immense size and unknown age. None but sacerdotal monarchs would ever have erected them; none but a fanatical people would ever have toiled upon them. We do not know for what purpose they were raised, unless as sepulchres for kings. They are supposed to have been built at a remote antiquity, between two thousand and three thousand years before Christ. Lepsius thought that the oldest of these Pyramids were built more than three thousand years before Christ. The Pyramid of Cheops, at Memphis, covers a square whose side is seven hundred and sixty-eight feet, and rises into the air nearly five hundred feet. It is a solid mass of stone, which has suffered less from time than the mountains near it. Possibly it stands over an immense substructure, in which may yet be found the lore of ancient Egypt; it may even prove to be

the famous labyrinth of which Herodotus speaks, built by the twelve kings of Egypt. According to this author, one hundred thousand men worked on this monument for forty years.

The palaces of the kings are mere imitations of the temples, their only difference of architecture being that their rooms are larger and in greater numbers. Some think that the famous labyrinth was a collective palace of many rulers.

Of Babylonian architecture we know little beyond what the Hebrew Scriptures and ancient authors tell us. But though nothing survives of ancient magnificence, we know that a city whose walls, according to Herodotus, were eighty-seven feet in thickness, three hundred and thirty-seven in height, and sixty miles in circumference, and in which were one hundred gates of brass, must have had considerable architectural splendor. This account of Babylon, however, is probably exaggerated, especially as to the height of the walls. The tower of Belus, the Palace of Nebuchadnezzar, and the Obelisk of Semiramis were probably wonderful structures, certainly in size, which is one of the conditions of architectural effect.

The Tyrians must have carried architecture to considerable perfection, since the Temple of Solomon, one of the most magnificent in the ancient world, was probably built by artists from Tyre. It was not remark-

able for size, — it was, indeed, very small, — but it had great splendor of decoration. It was of quadrangular outline, erected upon a solid platform of stone, and bearing a striking resemblance to the oldest Greek temples, like those of Ægina and Pæstum. The portico of the Temple as rebuilt by Herod was one hundred and eighty feet high, and the Temple itself was entered by nine gates, thickly coated with silver and gold. The inner sanctuary was covered on all sides with plates of gold, and was dazzling to the eye. The various courts and porticos and palaces with which it was surrounded gave to it a very imposing effect.

Architectural art in India was not so impressive and grand as in Egypt, and was directed chiefly to the erection of temples. Nor is it of very ancient date. There is no stone architecture now remaining in India, according to Sir James Fergusson, older than two and a half centuries before Christ; and this is in the form of Buddhist temples, generally traced to the great Asoka, who reigned from 272 B. C. to 236 B. C., and who established Buddhism as a state religion. There were doubtless magnificent buildings before his time, but they were of wood, and have all perished. We know, however, nothing about them.

The Buddhist temples were generally excavated out of the solid rock, and only the façades were ornamented. These were not larger than ordinary modern

parochial churches, and do not give the impression of extraordinary magnificence. Besides these rock-hewn temples in India there remain many examples of a kind of memorial monument called *stupas*, or *topes*. The earliest of these are single columns; but the later and more numerous are in the shape of cones or circular mounds, resembling domes, rarely exceeding one hundred feet in diameter. Around the apex of each was a balustrade, or some ornamental work, about six feet in diameter. These topes remind one of the Pantheon at Rome in general form, but were of much smaller size. They were built on a stone basement less than fifty feet in height, above which was the brickwork. In process of time they came to resemble pyramidal towers rather than rounded domes, and were profusely ornamented with carvings. The great peculiarity of all Indian architectural monuments is excessive ornamentation rather than beauty of proportion or grand effect.

In course of time, however, Indian temples became more and more magnificent; and a Chinese traveller in the year 400 A. D. describes one in Gaudhava as four hundred and seventy feet high, decorated with every sort of precious substance. Its dome, as it appears in a bas-relief, must have rivalled that of St. Peter's at Rome; but no trace of it now remains. The topes of India, which were numerous, indicate that the Hindus

were acquainted with the arch, both pointed and circular, which was not known to the Egyptians or the Greeks. The most important of these buildings, in which are preserved valuable relics, are found in the Punjab. They were erected about twenty years before Christ. In size, they are about one hundred and twenty-seven feet in diameter. Connected with the circular topes are found what are called *rails*, surrounding the topes, built in the form of rectangles with heavy pillars. One of the most interesting of these was found to be two hundred and seventy-five feet long, having square pillars twenty-two feet in height, profusely carved with scenes from the life of Buddha, topped by capitals in the shape of elephants supporting a succession of horizontal stone beams, all decorated with a richness of carving unknown in any other country. The Amravati rail, one of the finest of the ancient monuments of India, is found to be one hundred and ninety-five by one hundred and sixty-five feet, having octagonal pillars ornamented with the most elaborate carvings.

From an architectural point of view, the rails were surpassed by the *chaityas*, or temple-caves, in western India. These were cut in the solid rock. Some one thousand different specimens are to be found. The façades of these caves are perfect, generally in the form of an arch, executed in the rock with every

variety of detail, and therefore imperishable without violence. The process of excavation extended through ten centuries from the time of Asoka; and the interiors as well as the façades were highly ornamented with sculptures. The temple-caves are seldom more than one hundred and fifty feet deep and fifty feet in width, and the roofs are supported by pillars like the interior of Gothic cathedrals, some of which are of beautiful proportions with elaborated capitals. Though these rock-hewn temples are no larger than ordinary Christian churches, they are very impressive from the richly decorated carvings; they were lighted from a single opening in the façade, sometimes in the shape of a horseshoe.

Besides these chaityas, or temples, there are still more numerous *viharas*, or monasteries, found in India, of different dates, but none older than the third century before Christ. They show a central hall, surrounded on three sides by cells for the monks. On the fourth side is an open verandah; facing this is generally a shrine with an image of Buddha. These edifices are not imposing unless surrounded by galleries, as some were, supported by highly decorated pillars. The halls are constructed in several stories with heavy masonry, in the shape of pyramids adorned with the figures of men and animals. One of these halls in southern India had fifteen hundred cells.

The most celebrated was the Nalanda monastery, founded in the first century by Nagarjuna, which accommodated ten thousand priests, and was enclosed by a wall measuring sixteen hundred feet by four hundred. It was to Central India what Mount Casino was to Italy, and Cluny was to France, in the Middle Ages, — the seat of learning and art.

It was not until the Mohammedan conquest in India that architecture received a new impulse from the Saracenic influence. Then arose the mosques, minarets, and palaces which are a wonder for their magnificence, and in which are seen the influence of Greek art as well as that of India. There is an Oriental splendor in these palaces and mosques which has called out the admiration of critics, although it is different from those types of beauty which we are accustomed to praise. But these later edifices were erected in the Middle Ages, coeval with the cathedrals of Europe, and therefore do not properly come under the head of ancient art, in which the ancient Hindus, whether of Aryan or Turanian descent, did not particularly excel. It was in matters of religion and philosophy that the Hindus felt most interest, even as the ancient Jews thought more of theology than of art and science.

Architecture, however, as the expression of genius and high civilization, was carried to perfection only by the Greeks, who excelled in so many things. It

was among the ancient Dorians, who descended from the mountains of northern Greece eighty years after the fall of Troy, that architectural art worthy of the name first appeared. The Pelasgi erected Cyclopean structures fifteen hundred years before Christ, as seen in the massive walls of the Acropolis at Athens, constructed of huge blocks of hewn stone, and in the palaces of the princes of the heroic times. The lintel of the doorway of the Mycenæan treasury is composed of a single stone twenty-seven feet long and sixteen broad. But these edifices, which aimed at splendor and richness merely, were deficient in that simplicity and harmony which have given immortality to the temples of the Dorians. In this style of architecture everything was suitable to its object, and was grand and noble. The great thickness of the columns, the beautiful entablature, the ample proportion of the capital, the great horizontal lines of the architrave and cornice predominating over the vertical lines of the columns, the severity of geometrical forms produced for the most part by straight lines, gave an imposing simplicity to the Doric temple.

How far the Greek architects were indebted to the Egyptian we cannot tell, for though columns are found amid the ruins of the Egyptian temples, they are of different shape from any made by the Greeks. In the structures of Thebes we find both the tumes-

cent and the cylindrical columns, from which amalgamation might have been produced the Doric column. The Greeks seized on beauty wherever they found it, and improved upon it. The Doric column was not probably an entirely new creation, but shaped after models furnished by the most original of all the ancient nations, even the Egyptians. The Doric temples were uniform in plan. The columns were fluted, and were generally about six diameters in height; they diminished gradually upward from the base, with a slightly convexed swelling; they were surmounted by capitals regularly proportioned according to their height. The entablature which the column supported was also of a certain number of diameters in height. So regular and perfect was the plan of the temple, that "if the dimensions of a single column and the proportion the entablature should bear to it were given to two individuals acquainted with the style, with directions to compose a temple, they would produce designs exactly similar in size, arrangement, and general proportions." The Doric order possessed a peculiar harmony, but taste and skill were nevertheless necessary in order to determine the number of diameters a column should have, and also the height of the entablature.

The Doric was the favorite order of European Greece for one thousand years, and also of her colonies in Sic

ily and Magna Græcia. It was used exclusively until after the Macedonian conquest, and was chiefly applied to temples. The massive temples of Pæstum, the colossal magnificence of the Sicilian ruins, and the more elegant proportions of the Athenian structures, like the Parthenon and Temple of Theseus, show the perfection of the Doric architecture. Although the general style of all the Doric temples is so uniform, hardly two temples were alike. The earlier Doric was more massive; the later was more elegant, and its edifices were rich in sculptured decorations. Nothing could surpass the beauty of a Doric temple in the time of Pericles. The stylobate, or general base upon which the columnar story stood, from two thirds to a whole diameter of a column in height, was built in three equal courses, which gradually receded upward and formed steps, as it were, of a grand platform. The column, simply set upon the stylobate, without base or pedestal, was from four to six diameters in height, with twenty flutes, having a capital of half a diameter. On this rested the entablature, two column-diameters in height, which was divided into architrave (lower mouldings), frieze (broad middle space), and cornice (upper mouldings). The great beauty of the temple was the portico in front,—a forest of columns supporting the triangular pediment, about a diameter and a half to the apex, making an angle at the base

of about fourteen degrees. From the pediment projects the cornice, while in the apex and at the base of the flat three-cornered gable are sculptured ornaments, generally the figures of men or animals. The whole outline of columns supporting the entablature is graceful, while the variety of light and shade arising from the arrangement of mouldings and capitals produces a grand effect.

The Parthenon, the most beautiful specimen of the Doric, has never been equalled, and it still stands august in its ruins, the glory of the old Acropolis and the pride of Athens. It was built of white Pentelic marble, and rested on a basement of limestone. It was two hundred and twenty-seven feet in length, one hundred and one in breadth, and sixty-five in height, surrounded with forty-eight fluted columns, six feet and two inches at the base and thirty-four feet in height, while within the peristyle, at either end, was an interior range of columns standing before the end of the cella. The frieze and the pediment were elaborately ornamented with reliefs and statues, and the cella, within and without, was adorned with the choicest sculptures of Phidias. The remains of the exquisite sculptures of the pediment and the frieze were in the early part of this century brought from Greece by Lord Elgin, purchased by the English government, and placed in the British Museum, where,

preserved from further dilapidation, they stand as indisputable evidence of the perfection of Greek art. The grandest adornment of the temple was the colossal statue of Minerva in the eastern apartment of the cella, forty feet in height, composed of gold and ivory; the inner walls of the chamber were decorated with paintings, and the whole temple was a repository of countless treasure. But the Parthenon, so regular to the eye with its vertical, oblique, and horizontal lines, was curved in every line, with the exception of the gable, — with its entablature, architrave, frieze, and cornice, together with the basement, all arched upwards; and even the columns had a slight convexity of vertical line, amounting to $\frac{1}{550}$ of the entire height of shaft, though so slightly as not to be perceptible. These curved lines gave to the structure a peculiar grace which cannot be imitated, as well as an effect of solidity.

Nearly coeval with the Doric was the Ionic order, invented by the Asiatic Greeks, still more graceful, though not so imposing. The Acropolis is a perfect example of this order. The column is nine diameters in height, with a base, while the capital is more ornamented than the Doric. The shaft is fluted with twenty-four flutes and alternate fillets (flat longitudinal ridges), and the fillet is about a quarter the width of the flute. The pediment is flatter than that of the

Doric order, and more elaborate. The great distinction of the Ionic column is a base, and a capital formed with volutes (spiral scrolls), the shaft also being more slender. Vitruvius, the greatest authority among the ancients in architecture, says that "the Greeks, in inventing these two kinds of columns, imitated in the one the naked simplicity and dignity of man, and in the other the delicacy and ornaments of woman; the base of the Ionic was the imitation of sandals, and the volutes of ringlets." The discoveries of many of the Ionic ornamentations among the remains of Assyrian architecture indicate the Oriental source of the Ionic ideas, just as the Doric style seems to have originated in Egypt. The artistic Greeks, however, always simplified and refined upon their masters.

The Corinthian order exhibits a still greater refinement and elegance than the other two, and was introduced toward the end of the Peloponnesian War. Its peculiarity consists in columns with foliated capitals modelled after the acanthus leaf, and still greater height, about ten diameters, surmounted with a more ornamented entablature. Of this order the most famous temple in Greece was that of Minerva at Tegea, built by Scopas of Paros, but destroyed by fire four hundred years before Christ.

Nothing more distinguished Greek architecture than the variety, the grace, and the beauty of the mouldings,

generally in eccentric curves. The general outline of the moulding is a gracefully flowing cyma, or wave, concave at one end and convex at the other, like an Italic *f*, the concavity and convexity being exactly in the same curve, according to the line of beauty which Hogarth describes.

The most beautiful application of Greek architecture was in the temples, which were very numerous and of extraordinary grandeur, long before the Persian War. Their entrance was always from the west or the east. They were built either in an oblong or round form, and were mostly adorned with columns. Those of an oblong form had columns either in the front alone, or in the eastern and western fronts, or on all the four sides. They generally had porticos attached to them, and were without windows, receiving their light from the door or from above. The friezes were adorned with various sculptures, as were sometimes the pediments, and no expense was spared upon them. The most important part of the temple was the cell (*cella*, or temple proper, a square chamber), in which the statue of the deity was kept, generally surrounded with a balustrade. In front of the cella was the vestibule, and in the rear or back a chamber in which the treasures of the temple were kept. Names were applied to the temples as well as to the porticos, according to the number of columns in the portico at either

end of the temple,—such as the tetrastyle (four columns in front), or hexastyle (when there were six). There were never more than ten columns across the front. The Parthenon had eight, but six was the usual number. It was the rule to have twice as many columns along the sides as in front. Some of the temples had double rows of columns on all sides, like that of Diana at Ephesus and of Quirinus at Rome. The distance between the columns varied from one diameter and a half to four diameters. About five eighths of a Doric temple were occupied by the cella, and three eighths by the portico.

That which gives to the Greek temples so much simplicity and harmony,—the great elements of beauty in architecture,—is the simple outline in parallelogrammic and pyramidal forms, in which the lines are uninterrupted through their entire length. This simplicity and harmony are more apparent in the Doric than in any of the other orders, but pertain to all the Grecian temples of which we have knowledge. The Ionic and Corinthian, or the voluted and foliated orders, do not possess that severe harmony which pervades the Doric; but the more beautiful compositions are so consummate that they will ever be taken as models of study.

There is now no doubt that the exteriors of the Grecian temples were ornamented in color,—perhaps

with historical pictures, etc.,—although as the traces have mostly disappeared it is impossible to know the extent or mode of decoration. It has been thought that the mouldings also may have been gilded or colored, and that the background of the sculptures had some flat color laid on as a relief to the raised figures. We may be sure, however it was done, that the effect was not gaudy or crude, but restrained within the limits of refinement and good taste by the infallible artistic instinct of those masters of the beautiful.

It is not the magnitude of the Greek temples and other works of art which most impresses us. It is not for this that they are important models; it is not for this that they are copied and reproduced in all the modern nations of Europe. They were generally small compared with the temples of Egypt, and with the vast dimensions of Roman amphitheatres; only three or four would compare in size with a Gothic cathedral,—the Parthenon, the Temple of Olympian Zeus at Athens, and the Temple of Diana at Ephesus; even the Pantheon at Rome is small, compared with the later monuments of the Cæsars. The traveller is always disappointed in contemplating the ruins of Greek buildings so far as size is concerned. But it is their matchless proportions, their severe symmetry, the grandeur of effect, the undying beauty, the grace-

ful form which impress us, and make us feel that they are perfect. By the side of the Colosseum they are insignificant in magnitude; they do not cover acres, like the baths of Caracalla. Yet who has copied the Flavian amphitheatre; who erects an edifice after the style of the Thermæ? All artists, however, copy the Parthenon. That, and not the colossal monuments of the Cæsars, reappears in the capitals of Europe, and stimulates the genius of a Michael Angelo or a Christopher Wren.

The flourishing period of Greek architecture was during the period from Pericles to Alexander, — one hundred and thirteen years. The Macedonian conquest introduced more magnificence and less simplicity. The Roman conquest accelerated the decline in severe taste, when different orders began to be used indiscriminately.

In this state the art passed into the hands of the masters of the world, and they inaugurated a new era in architecture. The art was still essentially Greek, although the Romans derived their first knowledge from the Etruscans. The Cloaca Maxima, or Great Sewer, was built during the reign of the second Tarquin, — the grandest monument of the reign of the kings. It is not probable that temples and other public buildings in Rome were either beautiful or magnificent until the conquest of Greece, after which

Grecian architects were employed. The Romans adopted the Corinthian style, which they made even more ornamental; and by the successful combination of the Etruscan arch with the Grecian column they laid the foundation of a new and original style, susceptible of great variety and magnificence. They entered into architecture with the enthusiasm of their teachers, but in their passion for novelty lost sight of the simplicity which is the great fascination of a Doric temple. Says Memes:—

“They [the Romans] deemed that lightness and grace were to be attained not so much by proportion between the vertical and the horizontal as by the comparative slenderness of the former. Hence we see a poverty in Roman architecture in the midst of profuse ornament. The great error was a constant aim to lessen the diameter while they increased the elevation of the columns. Hence the massive simplicity and severe grandeur of the ancient Doric disappear in the Roman, the characteristics of the order being frittered down into a multiplicity of minute details.”

When the Romans used the Doric at all, they used a base for the column, which was never done at Athens. They also altered the Doric capital, which cannot be improved. Again, most of the Grecian Doric temples were peripteral, — surrounded with pillars on all the sides. But the Romans built with porticos on one front only. which had a greater projec-

tion than the Grecian. They generally were projected three columns, while the Greek portico had usually but a single row. Many of the Roman temples are circular, like the Pantheon, which has a portico of eight columns projected to the depth of three. Nor did the Romans construct hypæthral or uncovered temples with internal columns, like the Greeks. The Pantheon is an exception, since the dome has an open eye; and one great ornament of this beautiful structure is in the arrangement of internal columns placed in the front of niches, composed of antæ, or performed ends of walls, to carry an entablature round under an attic on which the cupola rests. The Romans also adopted coupled columns, broken and recessed entablatures, and pedestals, which are considered blemishes. They again paid more attention to the interior than to the exterior decoration of their palaces and baths,—as we may infer from the ruins of Hadrian's villa at Tivoli and the excavations of Pompeii.

The pediments (roof-angles) used in Roman architectural works are steeper than those made by the Greeks, varying in inclination from eighteen to twenty-five degrees, instead of fourteen. The mouldings are the same as the Grecian in general form, although they differ from them in contour; they are less delicate and graceful, but were used in great profusion. Roman

architecture is overdone with ornament, every moulding carved, and every straight surface sculptured with foliage or historical subjects in relief. The ornaments of the frieze consist of foliage and animals, with a variety of other things. The great exuberance of ornament is considered a defect, although when applied to some structures it is exceedingly beautiful. In the time of the first Cæsars Roman architecture had, from the huge size of the buildings, a character of grandeur and magnificence. Columns and arches appeared in all the leading public buildings, — columns generally forming the external and arches the internal construction. Fabric after fabric arose on the ruins of others. The Flavii supplanted the edifices of Nero, which ministered to debauchery, by structures of public utility.

The Romans invented no new principle in architecture, unless it be the arch, which was known, though not practically applied, by the Assyrians, Egyptians and Greeks. The Romans were a practical and utilitarian people, and needed for their various structures greater economy of material than was compatible with large blocks of stone, especially for such as were carried to great altitudes. The arch supplied this want, and is perhaps the greatest invention ever made in architecture. No instance of its adoption occurs in the construction of Greek edifices before

Greece became a part of the Roman empire. Its application dates back to the Cloaca Maxima, and may have been of Etrurian invention. Some maintain that Archimedes of Sicily was the inventor of the arch; but to whomsoever the glory of the invention is due, it is certain that the Romans were the first of European nations to make a practical application of its wonderful qualities. It enabled them to rear vast edifices with the humblest materials, to build bridges, aqueducts, sewers, amphitheatres, and triumphal arches, as well as temples and palaces. The merits of the arch have never been lost sight of by succeeding generations, and it is an essential element in the magnificent Gothic cathedrals of the Middle Ages. Its application extends to domes and cupolas, to floors and corridors and roofs, and to various other parts of buildings where economy of material and labor is desired. It was applied extensively to doorways and windows, and is an ornament as well as a utility. The most imposing forms of Roman architecture may be traced to a knowledge of the properties of the arch, and as brick was more extensively used than any other material, the arch was invaluable. The imperial palace on Mount Palatine, the Pantheon (except its portico and internal columns), the temples of Peace, of Venus and Rome, and of Minerva Medica, were of brick. So were the great baths of Titus, Cara-

calla, and Diocletian, the villa of Hadrian, the city walls, the villa of Mecænas at Tivoli, and most of the palaces of the nobility,—although, like many of the temples, they were faced with stone. The Colosseum was of travertine, a cheap white limestone, and faced with marble. It was another custom to stucco the surface of brick walls, as favorable to decorations. In consequence of the invention of the arch, the Romans erected a greater variety of fine structures than either the Greeks or Egyptians, whose public edifices were chiefly confined to temples. The arch entered into almost every structure, public or private, and superseded the use of long stone-beams, which were necessary in the Grecian temples, as also of wooden timbers, in the use of which the Romans were not skilled, and which do not really pertain to architecture: an imposing edifice must always be constructed of stone or brick. The arch also enabled the Romans to economize in the use of costly marbles, of which they were very fond, as well as of other stones. Some of the finest columns were made of Egyptian granite, very highly polished.

The extensive application of the arch doubtless led to the deterioration of the Grecian architecture, since it blended columns with arcades, and thus impaired the harmony which so peculiarly marked the temples of Athens and Corinth; and as taste became vitiated

with the decline of the empire, monstrous combinations took place, which were a great fall from the simplicity of the Parthenon and the interior of the Pantheon.

But whatever defects marked the age of Diocletian and Constantine, it can never be questioned that the Romans carried architecture to a perfection rarely attained in our times. They may not have equalled the severe simplicity of their teachers the Greeks, but they surpassed them in the richness of their decorations, and in all buildings designed for utility, especially in private houses and baths and theatres.

The Romans do not seem to have used other than semicircular arches. The Gothic, or Pointed, or Christian architecture, as it has been variously called, was the creation of the Middle Ages, and arose almost simultaneously in Europe after the first Crusade, so that it would seem to be of Eastern origin. But it was a graft on the old Roman arch, in the curve of the ellipse rather than the circle.

Aside from this invention of the arch, to which we are indebted for the most beautiful ecclesiastical structures ever erected, we owe everything in architecture to the Greeks and Romans. We have found out no new principles which were not known to Vitruvius. No one man was the inventor or creator of the wonderful structures which ornamented the cities of the an-

cient world. We have the names of great architects, who reared various and faultless models, but they all worked upon the same principles, and these can never be subverted ; so that in architecture the ancients are our schoolmasters, whose genius we revere the more we are acquainted with their works. What more beautiful than one of those grand temples which the cultivated heathen Greeks erected to the worship of their unknown gods! — the graduated and receding stylobate as a base for the fluted columns, rising at regular distances in all their severe proportion and matchless harmony, with their richly carved capitals supporting an entablature of heavy stones, most elaborately moulded and ornamented with the figures of plants and animals ; and rising above this, on the ends of the temple, or over a portico several columns deep, the pediment, covered with chiselled cornices, with still richer ornaments rising from the apices and at the feet, all carved in white marble, and then spread over an area larger than any modern churches, making a forest of columns to bear aloft those ponderous beams of stone, without anything tending to break the continuity of horizontal lines, by which the harmony and simplicity of the whole are regulated ! So accurately squared and nicely adjusted were the stones and pillars of which these temples were composed that there was scarcely need even of cement. Without

noise or confusion or sound of hammers did those temples rise, since all their parts were cut and carved in the distant quarries, and with mathematical precision. And within the cella, nearly concealed by surrounding columns, were the statues of the gods, and the altars on which incense was offered, or sacrifices made. In every part, interior and exterior, do we see a matchless proportion and beauty, whether in the shaft or the capital or the frieze or the pilaster or the pediment or the cornices, or even the mouldings,—everywhere grace and harmony, which grow upon the mind the more they are contemplated. The greatest evidence of the matchless creative genius displayed in those architectural wonders is that after two thousand years, and with all the inventions of Roman and modern artists, no improvement has been made; and those edifices which are the admiration of our own times are deemed beautiful as they approximate the ancient models, which will forever remain objects of imitation. No science can make two and two other than four; no art can make a Doric temple different from the Parthenon without departing from the settled principles of beauty and proportion which all ages have indorsed. Such were the Greeks and Romans in an art which is one of the greatest indices of material civilization, and which by them was derived from geometrical forms, or the imitation of Nature

The genius displayed by the ancients in sculpture is even more remarkable than their skill in architecture. Sculpture was carried to perfection only by the Greeks; but they did not originate the art, since we read of sculptured images from the remotest antiquity. The earliest names of sculptors are furnished by the Old Testament. Assyria and Egypt are full of relics to show how early this art was cultivated. It was not carried to perfection as early, probably, as architecture; but rude images of gods, carved in wood, are as old as the history of idolatry. The history of sculpture is in fact identified with that of idols. The Egyptians were probably the first who made any considerable advances in the execution of statues. Those which remain are rude, simple, uniform, without beauty or grace (except a certain serenity of facial expression which seems to pervade all their portraiture), but colossal and grand. Nearly two thousand years before Christ the walls of Thebes were ornamented with sculptured figures, even as the gates of Babylon were made of sculptured bronze. The dimensions of Egyptian colossal figures surpass those of any other nation. The sitting statues of Memnon at Thebes are fifty feet in height, and the Sphinx is twenty-five,—all of granite. The number of colossal statues was almost incredible. The sculptures found among the ruins of Karnak must have been mad

nearly four thousand years ago. They exhibit great simplicity of design, but have not much variety of expression. They are generally carved from the hardest stones, and finished so nicely that we infer that the Egyptians were acquainted with the art of hardening metals for their tools to a degree not known in our times. But we see no ideal grandeur among any of the remains of Egyptian sculpture; however symmetrical or colossal, there is no diversity of expression, no trace of emotion, no intellectual force,—everything is calm, impassive, imperturbable. It was not until sculpture came into the hands of the Greeks that any remarkable excellence in grace of form or expression of face was reached. But the progress of development was slow. The earliest carvings were rude wooden images of the gods, and more than a thousand years elapsed before the great masters were produced whose works marked the age of Pericles.

It is not my object to give a history of the development of the plastic art, but to show the great excellence it attained in the hands of immortal sculptors.

The Greeks had an intuitive perception of the beautiful, and to this great national trait we ascribe the wonderful progress which sculpture made. Nature was most carefully studied by the Greek artists, and that which was most beautiful in Nature became the object of their imitation. They even attained to an

ideal excellence, since they combined in a single statue what could not be found in a single individual, — as Zeuxis is said to have studied the beautiful forms of seven virgins of Crotona in order to paint his famous picture of Venus. Great as was the beauty of Phryne or Aspasia or Lais, yet no one of them could have served for a perfect model; and it required a great sensibility to beauty in order to select and idealize what was most perfect in the human figure. Beauty was adored in Greece, and every means were used to perfect it, especially beauty of form, which is the characteristic excellence of Grecian statuary. The gymnasia were universally frequented; and the great prizes of the games, bestowed for feats of strength and agility, were regarded as the highest honors which men could receive, — the subject of the poet's ode and the people's admiration. Statues of the victors perpetuated their fame and improved the sculptor's art. From the study of these statues were produced those great creations which all subsequent ages have admired; and from the application of the principles seen in these forms we owe the perpetuation of the ideas of grace and beauty such as no other people besides the Greeks had ever discovered, or indeed scarcely appreciated. The sculpture of the human figure became a noble object of ambition in Greece, and was most munifi-

zently rewarded. Great artists arose, whose works adorned the temples of Greece so long as she preserved her independence, and when that was lost, her priceless productions were scattered over Asia and Europe. The Romans especially seized what was most prized, whether or not they could tell what was most perfect. Greece lived in her marble statues more than in her government or laws; and when we remember the estimation in which sculpture was held among the Greeks, the great prices paid for masterpieces, the care and attention with which they were guarded and preserved, and the innumerable works which were produced, filling all the public buildings, especially consecrated places, and even open spaces and the houses of the rich and great, calling from all classes admiration and praise,—we cannot think it likely that so great perfection will ever be reached again in those figures which are designed to represent beauty of form. Even the comparatively few statues which have survived the wars and violence of two thousand years, convince us that the moderns can only imitate; they can produce no creations equal to those by Athenian artists. “No mechanical copying of Greek statues, however skilful the copyist, can ever secure for modern sculpture the same noble and effective character it possessed among the Greeks, for the simple reason that the imitation,

close as may be the resemblance, is but the result of the eye and hand, while the original is the expression of a true and deeply felt sentiment. Art was not sustained by the patronage of a few who affect to have what is called *taste*; in Greece the artist, having a common feeling for the beautiful with his countrymen, produced his works for the public, which were erected in places of honor and dedicated in temples of the gods."

It was not until the Persian wars awakened among the Greeks the slumbering consciousness of national power, and Athens became the central point of Grecian civilization, that sculpture, like architecture and painting, reached its culminating point of excellence under Phidias and his contemporaries. Great artists had previously made themselves famous, like Miron, Polykletus, and Ageladas; but the great riches which flowed into Athens at this time gave a peculiar stimulus to art, especially under the encouragement of such a ruler as Pericles, whose age was the golden era of Grecian history.

Pheidias, or Phidias, was to sculpture what Æschylus was to tragic poetry,—the representative of the sublime and grand. He was born four hundred and eighty-four years before Christ, and was the pupil of Ageladas. He stands at the head of the ancient sculptors, not from what *we* know of him, for

his masterpieces have perished, but from the estimation in which he was held by the greatest critics of antiquity. It was to him that Pericles intrusted the adornment of the Parthenon, and the numerous and beautiful sculptures of the frieze and the pediment were the work of artists whom he directed. His great work in that wonderful edifice was the statue of the goddess Minerva herself, made of gold and ivory, forty feet in height, standing victorious, with a spear in her left hand and an image of victory in her right, with helmet on her head, and her shield resting by her side. The cost of this statue may be estimated when we consider that the gold alone used upon it was valued at forty-four talents, equal to five hundred thousand dollars of our money, — an immense sum in that age. Some critics suppose that this statue was overloaded with ornament, but all antiquity was unanimous in its admiration. The exactness and finish of detail were as remarkable as the grandeur of the proportions. Another of the famous works of Phidias was a colossal bronze statue of Athene Promachos, sixty feet in height, on the Acropolis between the Propylæa and the Parthenon. But both of these yielded to the colossal statue of Zeus in his great temple at Olympia, represented in a sitting posture, forty feet high, on a pedestal of twenty feet. The god was seated on a throne. Ebony, gold, ivory, and

precious stones formed, with a multitude of sculptured and painted figures, the wonderful composition of this throne. In this his greatest work the artist sought to embody the idea of majesty and repose, — of a supreme deity no longer engaged in war with Titans and Giants, but enthroned as a conqueror, ruling with a nod the subject world, and giving his blessing to those victories which gave glory to the Greeks. So famous was this statue, which was regarded as the masterpiece of Grecian art, that it was considered a calamity to die without having seen it; and this served for a model for all subsequent representations of majesty and power in repose among the ancients. It was removed to Constantinople by Theodosius I., and was destroyed by fire in the year 475 A. D. Phidias executed various other famous works, which have perished; but even those that were executed under his superintendence which have come down to our times, — like the statues which ornamented the pediment of the Parthenon, — are among the finest specimens of art that exist, and exhibit the most graceful and appropriate forms which could have been selected, uniting grandeur with simplicity, and beauty with accuracy of anatomical structure. His distinguishing excellence was ideal beauty, and that of the sublimest order.

Of all the wonders and mysteries of ancient art the

colossal statues of ivory and gold were perhaps the most remarkable, and the difficulty of executing them has been set forth by the ablest of modern critics, like Winckelmann, Heyne, and De Quincey. "The grandeur of their dimensions, the perfection of their workmanship, the richness of their materials, their majesty, beauty, and ideal truth, the splendor of the architecture and pictorial decoration with which they were associated,—all conspired to impress the beholder with wonder and awe, and induce a belief of the actual presence of the god."

After the Peloponnesian War a new school of art arose in Athens, which appealed more to the passions. Of this school was Praxiteles, who aimed to please without seeking to elevate or instruct. No one has probably ever surpassed him in execution. He wrought in bronze and marble, and was one of the artists who adorned the Mausoleum of Artemisia. Without attempting the sublime impersonation of the deity, in which Phidias excelled, he was unsurpassed in the softer graces and beauties of the human form, especially in female figures. His most famous work was an undraped statue of Venus, for his native town of Cnidus, which was so remarkable that people flocked from all parts of Greece to see it. He did not aim at ideal majesty so much as at ideal gracefulness: his works were formed from the most beautiful liv-

ing models, and hence expressed only the ideal of sensuous charms. It is probable that the Venus de Medici of Cleomenes was a riere copy of the Aphrodite of Praxiteles, which was so highly extolled by the ancient authors; it was of Parian marble, and modelled from the celebrated Phryne. His statues of Dionysus also expressed the most consummate physical beauty, representing the god as a beautiful youth crowned with ivy, and expressing tender and dreamy emotions. Praxiteles sculptured several figures of Eros, or the god of love, of which that at Thespiae attracted visitors to the city in the time of Cicero. It was subsequently carried to Rome, and perished by a conflagration in the time of Titus. One of the most celebrated statues of this artist was an Apollo, many copies of which still exist. His works were very numerous, but chiefly from the circle of Dionysus, Aphrodite, and Eros, in which adoration for corporeal attractions is the most marked peculiarity, and for which the artist was fitted by his dissolute life.

Scopas was the contemporary of Praxiteles, and was the author of the celebrated group of Niobe, which is one of the chief ornaments of the gallery of sculpture at Florence. He flourished about three hundred and fifty years before Christ, and wrought chiefly in marble. He was employed in decorating the Mausoleum which Artemisia erected to her husband, — one of the wonders

of the world. His masterpiece is said to have been a group representing Achilles conducted to the island of Leuce by the divinities of the sea, which ornamented the shrine of Domitius in the Flaminian Circus. In this, tender grace, heroic grandeur, daring power, and luxurious fulness of life were combined with wonderful harmony. Like the other great artists of this school, Scopas exhibited the grandeur and sublimity for which Phidias was celebrated, but a greater refinement and luxury, as well as skill in the use of drapery.

Sculpture in Greece culminated, as an art, in Lysippus, who worked chiefly in bronze. He is said to have executed fifteen hundred statues, and was much esteemed by Alexander the Great, by whom he was extensively patronized. He represented men not as they were, but as they appeared to be; and if he exaggerated, he displayed great energy of action. He aimed to idealize merely human beauty, and his imitation of Nature was carried out in the minutest details. None of his works are extant; but as he alone was permitted to make the statue of Alexander, we infer that he had no equals. The Emperor Tiberius transferred one of his statues (that of an athlete) from the baths of Agrippa to his own chamber, which so incensed the people that he was obliged to restore it. His favorite subject was Hercules, and a colossal

statue of this god was carried to Rome by Fabius Maximus, when he took Tarentum, and afterward was transferred to Constantinople; the Farnese Hercules and the Belvidere Torso are probably copies of this work. He left many eminent scholars, among whom were Chares (who executed the famous Colossus of Rhodes), Agesander, Polydorus, and Athenodorus who sculptured the group of the "Laocoön." The Rhodian school was the immediate offshoot from the school of Lysippus at Sicyon; and from this small island of Rhodes the Romans, when they conquered it, carried away three thousand statues. The Colossus was one of the wonders of the world (seventy cubits in height); and the Laocoön (the group of the Trojan hero and his two sons encoiled by serpents) is a perfect miracle of art, in which pathos is exhibited in the highest degree ever attained in sculpture. It was discovered in 1506, near the baths of Titus, and is one of the choicest remains of ancient plastic art.

The great artists of antiquity did not confine themselves to the representation of man, but also carved animals with exceeding accuracy and beauty. Nicias was famous for his dogs, Myron for his cows, and Lysippus for his horses. Praxiteles composed his celebrated lion after a living animal. "The horses of the frieze of the Elgin Marbles," says Flaxman, "appear to live and move; to roll their eyes.

to gallop, prance, and curvet; the veins of their faces and legs seem distended with circulation. The beholder is charmed with the deer-like lightness and elegance of their make; and although the relief is not above an inch from the background, and they are so much smaller than nature, we can scarcely suffer reason to persuade us they are not alive." The Greeks also carved gems, cameos, medals, and vases, with unapproachable excellence. Very few specimens have come down to our times, but those which we possess show great beauty both in design and execution.

Grecian statuary began with ideal representations of the deities, and was carried to the greatest perfection by Phidias in his statues of Jupiter and Minerva. Then succeeded the school of Praxiteles, in which the figures of gods and goddesses were still represented, but in mortal forms. The school of Lysippus was famous for the statues of celebrated men, especially in cities where Macedonian rulers resided. Artists were expected henceforth to glorify kings and powerful nobles and rulers by portrait statues. From this period, however, plastic art degenerated; nor were works of original genius produced, but rather copies or varieties from the three great schools to which allusion has been made. Sculpture may have multiplied, but not new creations: al-

though some imitations of great merit were produced, like the Hermaphrodite, the Torso, the Farnese Hercules, and the Fighting Gladiator. When Corinth was sacked by Mummius, some of the finest statues of Greece were carried to Rome; and after the civil war between Cæsar and Pompey, the Greek artists emigrated to Italy. The fall of Syracuse introduced many works of priceless value into Rome; but it was from Athens, Delphi, Corinth, Elis, and other great centres of art that the richest treasures were brought. Greece was despoiled to ornament Italy.

The Romans did not create a school of sculpture. They borrowed wholly from the Greeks, yet made, especially in the time of Hadrian, many beautiful statues. They were fond of this art, and all eminent men had statues erected to their memory. The busts of emperors were found in every great city, and Rome was filled with statues. The monuments of the Romans were even more numerous than those of the Greeks, and among them some admirable portraits are found. These sculptures did not express that consummation of beauty and grace, of refinement and sentiment, which marked the Greeks; but the imitations were good. Art had reached its perfection under Lysippus; there was nothing more to learn. Genius in that department could soar no higher. It will never rise to loftier heights.

It is noteworthy that the purest forms of Grecian art arose in its earlier stages. From a moral point of view, sculpture declined from the time of Phidias. It was prostituted at Rome under the emperors. The specimens which have often been found among the ruins of ancient baths make us blush for human nature. The skill of execution did not decline for several centuries; but the lofty ideal was lost sight of, and gross appeals to human passions were made by those who sought to please corrupt leaders of society in an effeminate age. The turgidity and luxuriance of art gradually passed into tameness and poverty. The reliefs on the Arch of Constantine are rude and clumsy compared with those on the column of Marcus Aurelius.

It is not my purpose to describe the decline of art, or enumerate the names of the celebrated masters who exalted sculpture in the palmy days of Pericles or even Alexander. I simply speak of sculpture as an art which reached a great perfection among the Greeks and Romans, as we have a right to infer from the specimens that have been preserved. How many more must have perished, we may infer from the criticisms of the ancient authors. The finest productions of our own age are in a measure reproductions; they cannot be called creations, like the statue of the Olympian Jove. Even the Moses of

Michael Angelo is a Grecian god, and Powers's Greek Slave is a copy of an ancient Venus. The very tints which have been admired in some of the works of modern sculptors are borrowed from Praxiteles, who succeeded in giving to his statues an appearance of living flesh. The Museum of the Vatican alone contains several thousand specimens of ancient sculpture which have been found among the débris of former magnificence, many of which are the productions of Greek artists transported to Rome. Among them are antique copies of the Cupid and the Faun of Praxiteles, the statue of Demosthenes, the Minerva Medica, the Athlete of Lysippus, the Torso Belvedere sculptured by Apollonius, the Belvidere Antinous, of faultless anatomy and a study for Domenichino, the Laocoön, so panegyricized by Pliny, the Apollo Belvedere, the work of Agasias of Ephesus, the Sleeping Ariadne, with numerous other statues of gods and goddesses, emperors, philosophers, poets, and statesmen of antiquity. The Dying Gladiator, which ornaments the capitol, is alone a magnificent proof of the perfection to which sculpture was carried centuries after the art had culminated at Athens. And these are only a few which stand out among the twenty thousand recovered statues that now embellish Italy, to say nothing of those that are scattered over Europe. We have the names of hundreds of artists who were famous in

their day. Not merely the figures of men are chiselled, but of animals and plants. Nature in all her forms was imitated; and not merely Nature, but the dresses of the ancients are perpetuated in marble. No modern sculptor has equalled, in delicacy of finish, the draperies of those ancient statues as they appear to us even after the exposure and accidents of two thousand years. No one, after a careful study of the museums of Europe, can question that of all the nations who have claimed to be civilized, the ancient Greeks and Romans deserve a proud pre-eminence in an art which is still regarded as among the highest triumphs of human genius. All these matchless productions of antiquity are the result of native genius alone, without the aid of Christian ideas. Nor with the aid of Christianity are we sure that any nation will ever soar to loftier heights than did the Greeks in that proud realm which was consecrated to Paganism.

We are not so certain in regard to the excellence of the ancients in the art of painting as we are in regard to sculpture and architecture, since so few specimens of painting have been preserved. We have only the testimony of the ancients themselves; and as they had so severe a taste and so great a susceptibility to beauty in all its forms, we cannot suppose that their notions were crude in this great art which the mod-

erns have carried to such great perfection. In this art the moderns doubtless excel, especially in perspective and drawing, and light and shade. No age, we fancy, can surpass Italy in the fifteenth and sixteenth centuries, when the genius of Raphael, Correggio, and Domenichino blazed with such wonderful brilliancy.

Painting in some form, however, is very ancient, though not so ancient as are the temples of the gods and the statues that were erected to their worship. It arose with the susceptibility to beauty of form and color, and with the view of conveying thoughts and emotions of the soul by imitation of their outward expression. The walls of Babylon were painted after Nature with representations of different species of animals and of combats between them and man. Semiramis was represented as on horseback, striking a leopard with a dart, and her husband Ninus as wounding a lion. Ezekiel describes various idols and beasts portrayed upon the walls, and even princes painted in vermilion, with girdles around their loins. In ages almost fabulous there were some rude attempts in this art, which probably arose from the coloring of statues and reliefs. The wooden chests of Egyptian mummies are covered with painted and hieroglyphic presentations of religious subjects; but the colors were laid without regard to light and shade. The Egyptians did not seek to represent the passions and emotions

which agitate the soul, but rather to authenticate events and actions; and hence their paintings, like hieroglyphics, are but inscriptions. It was their great festivals and religious rites which they sought to perpetuate, not ideas of beauty or of grace. Thus their paintings abound with dismembered animals, plants, and flowers, with censers, entrails,—whatever was used in their religious worship. In Greece also the original painting consisted in coloring statues and reliefs of wood and clay. At Corinth, painting was early united with the fabrication of vases, on which were rudely painted figures of men and animals. Among the Etruscans, before Rome was founded, it is said there were beautiful paintings, and it is probable that these people were advanced in art before the Greeks. There were paintings in some of the old Etruscan cities which the Roman emperors wished to remove, so much admired were they even in the days of the greatest splendor. The ancient Etruscan vases are famous for designs which have never been exceeded in purity of form, but it is probable that these were copied from the Greeks.

Whether the Greeks or the Etruscans were the first to paint, however, the art was certainly carried to the greatest perfection among the former. The development of it was, like all arts, very gradual. It probably began by drawing the outline of a shadow

without intermediate markings; the next step was the complete outline with the inner markings, — such as are represented on the ancient vases, or like the designs of Flaxman. They were originally practised on a white ground; then light and shade were introduced, and then the application of colors in accordance with Nature. We read of a great painting by Bularchus, of the battle of Magnete, purchased by a king of Lydia seven hundred and eighteen years before Christ. As the subject was a battle, it must have represented the movement of figures, although we know nothing of the coloring or of the real excellence of the work, except that the artist was paid munificently. Cimon of Cleona is the first great name connected with the art in Greece. He is praised by Pliny, to whom we owe the history of ancient painting more than to any other author. Cimon was not satisfied with drawing simply the outlines of his figures, such as we see in the oldest painted vases, but he also represented limbs, and folds of garments. He invented the art of foreshortening, or the various representations of the diminution of the length of figures as they appear when looked at obliquely; and hence was the first painter of perspective. He first made muscular articulations, indicated the veins, and gave natural folds to drapery.

A much greater painter than he was Polygnotus

of Thasos, the contemporary of Phidias, who came to Athens about the year 463 B. C., — one of the greatest geniuses of any age, and one of the most magnanimous, who had the good fortune to live in an age of exceeding intellectual activity. He painted on panels, which were afterward let into the walls, being employed on the public buildings of Athens, and on the great temple of Delphi, the hall of which he painted gratuitously. He also decorated the Propylæa, which was erected under the superintendence of Phidias. The pictures of Polygnotus had nothing of that elaborate grouping, aided by the powers of perspective, so much admired in modern art. His greatness lay in statuesque painting, which he brought nearly to perfection by ideal expression, accurate drawing, and improved coloring. He used but few colors, and softened the rigidity of his predecessors by making the mouth of beauty smile. He gave great expression to the face and figure, and his pictures were models of excellence for the beauty of the eyebrows, the blush upon the cheeks, and the gracefulness of the draperies. He strove, like Phidias, to express character in repose. He imitated the personages and the subjects of the old mythology, and treated them in an epic spirit, his subjects being almost invariably taken from Homer and the Epic cycle

Among the works of Polygnotus, as mentioned by Pliny, are his paintings in the Temple at Delphi, in the Propylæa of the Acropolis, in the Temple of Theseus, and in the Temple of the Dioscuri at Athens. He painted in a truly religious spirit, and upon symmetrical principles, with great grandeur and freedom, resembling Michael Angelo more than any other modern artist.

The use of oil was unknown to the ancients. The artists painted upon wood, clay, plaster, stone, parchment, but not upon canvas, which was not used till the time of Nero. They painted upon tablets or panels, and not upon the walls,—the panels being afterward framed and encased in the walls. The stylus, or cestrum, used in drawing and for spreading the wax colors was pointed on one end and flat on the other, and generally made of metal. Wax was prepared by purifying and bleaching, and then mixed with colors. When painting was practised in water-colors, glue was used with the white of an egg or with gums; but wax and resins were also worked with water, with certain preparations. This latter mode was called encaustic, and was, according to Plutarch, the most durable of all methods. It was not generally adopted till the time of Alexander the Great. Wax was a most essential ingredient, since it prevented the colors from cracking. Encaustic painting was

practised both with the cestrum and the pencil, and the colors were also burned in.

Fresco, or water-color, on fresh plaster, was used for coloring walls, which were divided into compartments or panels. The composition of the stucco, and the method of preparing the walls for painting, is described by the ancient writers: "They first covered the walls with a layer of ordinary plaster, over which, when dry, were successively added three other layers of a finer quality, mixed with sand. Above these were placed three layers of a composition of chalk and marble-dust, the upper one being laid on before the under one was dry; by which process the different layers were so bound together that the whole mass formed one beautiful and solid slab, resembling marble, and was capable of being detached from the wall and transported in a wooden frame to any distance. The colors were applied when the composition was still wet. The fresco wall, when painted, was covered with an encaustic varnish, both to heighten the color and to preserve it from the effects of the sun or the weather; but this process required so much care, and was attended with so much expense, that it was used only in the better houses and palaces." The later discoveries at Pompeii show the same correctness of design in painting as in sculpture, and also considerable perfection in coloring. The great

artists of Greece — Phidias and Euphranor, Zeuxis and Protogenes, Polygnotus and Lysippus — were both sculptors and painters, like Michael Angelo; and the ancient writers praise the paintings of these great artists as much as their sculpture. The Aldobrandini Marriage, found on the Esquiline Mount during the pontificate of Clement VIII., and placed in the Vatican by Pius VII., is admired both for drawing and color. Polygnotus was praised by Aristotle for his designs, and by Lucian for his color.

Dionysius and Mikon were the great contemporaries of Polygnotus, the former being celebrated for his portraits. His pictures were deficient in the ideal, but were remarkable for expression and elegant drawing. Mikon was particularly skilled in painting horses, and was the first who used for a color the light Attic ochre, and the black made from burnt vine-twigs. He painted three of the walls of the Temple of Theseus, and also the walls of the Temple of the Dioscuri.

A greater painter still was Apollodorus of Athens. Through his labors, about 408 B. C., dramatic effect was added to the style of Polygnotus, without departing from his pictures as models. "The acuteness of his taste," says Fuseli, "led him to discover that as all men were connected by one general form, so they were separated each by some predominant power, which fixed character and bound them to a class

Thence he drew his line of imitation, and personified the central form of the class to which his object belonged, and to which the rest of its qualities administered without being absorbed. Agility was not suffered to destroy firmness, solidity, or weight; nor strength and weight, agility. Elegance did not degenerate into effeminacy, nor grandeur swell to hugeness." His aim was to deceive the eye of the spectator by the semblance of reality: he painted men and things as they really appeared. He also made a great advance in coloring: he invented *chiaro-oscuro*. Other painters had given attention to the proper gradation of light and shade; he heightened this effect by the gradation of tints, and thus obtained what the moderns call *tone*. He was the first who conferred due honor on the pencil, — *primusque gloriam penicillo jure contulit*.

This great painter was succeeded by Zeuxis, who belonged to his school, but who surpassed him in the power to give ideal form to rich effects. He began his great career four hundred and twenty-four years before Christ, and was most remarkable for his female figures. His Helen, painted from five of the most beautiful women of Croton, was one of the most renowned productions of antiquity, to see which the painter demanded money. He gave away his pictures, because, with an artist's pride, he maintained

that their price could not be estimated. There is a tradition that Zeuxis laughed himself to death over an old woman painted by him. He arrived at illusion of the senses, regarded as a high attainment in art,—as in the instance recorded of his grapes, at which the birds pecked. He belonged to the Asiatic school, whose headquarters were at Ephesus,—the peculiarities of which were accuracy of imitation, the exhibition of sensuous charms, and the gratification of sensual tastes. He went to Athens about the time that the sculpture of Phidias was completed, which modified his style. His marvellous powers were displayed in the contrast of light and shade, which he learned from Apollodorus. He gave ideal beauty to his figures, but it was in form rather than in expression. He taught the true method of grouping, by making each figure the perfect representation of the class to which it belonged. His works were deficient in those qualities which elevate the feelings and the character. He was the Euripides rather than the Homer of his art. He exactly imitated natural objects, which are incapable of ideal representation. His works were not so numerous as they were perfect in their way, in some of which, as in the Infant Hercules strangling the Serpent, he displayed great dramatic power. Lucian highly praises his Female Centaur as one of the most remarkable paintings of

the world, in which he showed great ingenuity of contrasts. His Jupiter Enthroned is also extolled by Pliny, as one of his finest works. Zeuxis acquired a great fortune, and lived ostentatiously.

Contemporaneous with Zeuxis, and equal in fame, was Parrhasius, a native of Ephesus, whose skill lay in accuracy of drawing and power of expression. He gave to painting true proportion, and attended to minute details of the countenance and the hair. In his gods and heroes, he did for painting what Phidias did in sculpture. His outlines were so perfect as to indicate those parts of the figure which they did not express. He established a rule of proportion which was followed by all succeeding artists. While many of his pieces were of a lofty character, some were demoralizing. Zeuxis yielded the palm to him, since Parrhasius painted a curtain which deceived his rival, whereas the grapes of Zeuxis had deceived only birds. Parrhasius was exceedingly arrogant and luxurious, and boasted of having reached the utmost limits of his art. He combined the magic tone of Apollodorus with the exquisite design of Zeuxis and the classic expression of Polygnotus.

Many were the eminent painters that adorned the fifth century before Christ, not only in Athens, but in the Ionian cities of Asia. Timanthes of Sicyon was distinguished for invention, and Eupompus of the

same city founded a school. His advice to Lysippus is memorable: "Let Nature, not an artist, be your model." Protogenes was celebrated for his high finish. His Talissus took him seven years to complete. Pamphilus was celebrated for composition, Antiphilus for facility, Theon of Samos for prolific fancy, Apelles for grace, Pausias for his chiaro-oscuro, Nicomachus for his bold and rapid pencil, Aristides for depth of expression.

The art probably culminated in Apelles, who was at once a rich colorist and portrayer of sensuous charm and a scientific artist, while he added a peculiar grace of his own, which distinguished him above both his predecessors and contemporaries. He was contemporaneous with Alexander, and was alone allowed to paint the picture of the great conqueror. Apelles was a native of Ephesus, studied under Pamphilus of Amphipolis, and when he had gained reputation he went to Sicyon and took lessons from Melanthius. He spent the best part of his life at the court of Philip and Alexander, and painted many portraits of these great men and of their generals. He excelled in portraits, and labored so assiduously to perfect himself in drawing that he never spent a day without practising. He made great improvement in the mechanical part of his art, inventing some colors, and being the first to varnish pictures. By the general consent of ancient authors, Apelles stands at the head

of all the painters of their world. His greatest work was his *Venus Anadyomene*, or *Venus* rising out of the sea, in which female grace was personified; the falling drops of water from her hair gave the appearance of a transparent silver veil over her form. This picture cost one hundred talents, was painted for the Temple of *Æsculapius* at *Cos*, and afterward placed by *Augustus* in the temple which he dedicated to *Julius Cæsar*. The lower part of it becoming injured, no one could be found to repair it; nor was there an artist who could complete an unfinished picture which *Apelles* left. He feared no criticism, and was unenvious of the fame of rivals.

After *Apelles*, the art of painting declined, although great painters occasionally appeared, especially from the school of *Sicyon*, which was renowned for nearly two hundred years. The destruction of *Corinth* by *Mummius*, 146 B. C., gave a severe blow to Grecian art. This general destroyed, or carried to *Rome*, more works than all his predecessors combined. *Sulla*, when he spoiled *Athens*, inflicted a still greater injury; and from that time artists resorted to *Rome* and *Alexandria* and other flourishing cities for patronage and remuneration. The masterpieces of famous artists brought enormous prices, and *Greece* and *Asia* were ransacked for old pictures. The paintings which *Æmilius Paulus* brought from *Greece*

required two hundred and fifty wagons to carry them in the triumphal procession. With the spoliation of Greece, the migration of artists began; and this spoliation of Greece, Asia, and Sicily continued for two centuries. We have already said that such was the wealth of Rhodes in works of art that three thousand statues were found there by the conquerors: nor could there have been less at Athens, Olympia, and Delphi. Scaurus had all the public pictures of Sicily transported to Rome. Verres plundered every temple and public building in Sicily.

Thus Rome was possessed of the finest paintings in the world, without the slightest claim to the advancement of the art. And if the opinion of Sir Joshua Reynolds is correct, art could advance no higher in the realm of painting, as well as of statuary, than the Greeks had already borne it. Yet the Romans learned to place as high value on the works of Grecian genius as the English do on the paintings of the old masters of Italy and Flanders. And if they did not add to the art, they gave such encouragement that under the emperors it may be said to have been flourishing. Varro had a gallery of seven hundred portraits of eminent men. The portraits as well as the statues of the great were placed in the temples, libraries, and public buildings. The baths especially were filled with paintings.

The great masterpieces of the Greeks were either historical or mythological. Paintings of gods and heroes, groups of men and women, in which character and passion could be delineated, were the most highly prized. It was in the expression given to the human figure—in beauty of form and countenance, in which all the emotions of the soul, as well as the graces of the body were portrayed—that the Greek artists sought to reach the ideal, and to gain immortality. And they painted for a people who had both a natural and a cultivated taste and sensibility.

Among the Romans portrait, decorative, and scene painting engrossed the art, much to the regret of such critics as Pliny and Vitruvius. Nothing could be in more execrable taste than a colossal painting of Nero, one hundred and twenty feet high. From the time of Augustus landscape decorations were common, and were carried out with every species of license. Among the Greeks we do not read of landscape painting. This has been reserved for our age, and is much admired, as it was at Rome in the latter days of the empire. Mosaic work, of inlaid stones or composition of varying shades and colors, gradually superseded painting in Rome; it was first used for floors, and finally walls and ceilings were ornamented with it. It is true, the ancients could show no such exquisite perfection

of colors, tints, and shades as may be seen to-day in the wonderful reproductions of world-renowned paintings on the walls of St. Peter's at Rome ; but many ancient mosaics have been preserved which attest beauty of design of the highest character, — like the Battle of Issus, lately discovered at Pompeii ; and this brilliant art had its origin and a splendid development at the hands of the old Romans.

Thus in all those arts of which modern civilization is proudest, and in which the genius of man has soared to the loftiest heights, the ancients were not merely our equals, — they were our superiors. It is greater to originate than to copy. In architecture, in sculpture, and perhaps in painting, the Greeks attained absolute perfection. Any architect of our time, who should build an edifice in different proportions from those that were recognized in the great cities of antiquity, would make a mistake. Who can improve upon the Doric columns of the Parthenon, or upon the Corinthian capitals of the Temple of Jupiter ? Indeed, it is in proportion as we accurately copy the faultless models of the age of Pericles that excellence with us is attained and recognized ; when we differ from them we furnish grounds of just criticism. So in sculpture, — the finest modern works are inspired by antique models. It is only when the artist seeks to bring out the purest and

loftiest sentiments of the soul, such as only Christianity can inspire, that he may hope to surpass the sculpture of antiquity in one department of that art alone, — in expression, rather than in beauty of form, on which no improvement can be made. And if we possessed the painted Venus of Apelles, as we can boast of having the sculptured Venus of Cleomenes, we should probably discover greater richness of coloring as well as grace of figure than appear in that famous picture of Titian which is one of the proudest ornaments of the galleries of Florence, and one of the greatest marvels of Italian art.

AUTHORITIES.

WINCKELMANN'S History of Ancient Art; Müller's Ancient Art and its Remains; A. J. Guattani, *Antiquités de la Grande Grèce*; Mazois, *Antiquités de Pompeii*; Sir W. Gill, *Pompeiana*; Donaldson's *Antiquities of Athens*; Vitruvius, Stuart, Chandler, Clarke, Dodwell, Cleghorn, De Quincey, Fergusson, Schliemann, — these are some of the innumerable authorities on Architecture among the ancients.

In Sculpture, Pliny and Cicero are the most noted critics. There is a fine article in the *Encyclopædia Britannica* on this subject. In Smith's Dictionary are the Lives and works of the most noted masters. Müller's Ancient Art alludes to the leading masterpieces

Montfauçon's *Antiquité Expliquée en Figures*; *Specimens of Ancient Sculpture*, by the Society of Dilettanti, London, 1809; *Ancient Marbles of the British Museum*, by Taylor Combe; Millin, *Introduction à l'Étude des Monuments Antiques*; *Monuments Inédits d'Antiquité figurée*, recueillis et publiés par Raoul-Rochette; Gerhard's *Archäologische Zeitung*; David's *Essai sur le Classement Chronologique des Sculpteurs Grecs les plus célèbres*.

In Painting, see Müller's *Ancient Art*; Fuseli's *Lectures*; Sir Joshua Reynolds's *Lectures*; Lanzi's *History of Painting in Italy* (translated by Roscoe); and the Article on "Painting," *Encyclopædia Britannica*, and Article "Pictura," *Smith's Dictionary*, both of which last mentioned refer to numerous German, French, and other authorities, should the reader care to pursue the subject. Vitruvius (on *Architecture*, translated by Gwilt) writes at some length on ancient wall-paintings. The finest specimens of ancient paintings are found in catacombs, the baths, and the ruins of Pompeii. On this subject Winckelmann is the great authority.

ANCIENT SCIENTIFIC KNOWLEDGE.

ASTRONOMY, GEOGRAPHY, ETC.

2000-100 B. C.

ANCIENT SCIENTIFIC KNOWLEDGE

ASTRONOMY, GEOGRAPHY, ETC.

IT would be absurd to claim for the ancients any great attainments in science, such as they made in the field of letters or the realm of art. It is in science, especially when applied to practical life, that the moderns show their great superiority to the most enlightened nations of antiquity. In this great department of human inquiry modern genius shines with the lustre of the sun. It is this which most strikingly attests the advance of civilization. It is this which has distinguished and elevated the races of Europe, and carried them in the line of progress beyond the attainments of the Greeks and Romans. With the magnificent discoveries and inventions of the last three hundred years in almost every department of science, especially in the explorations of distant seas and continents, in the analysis of chemical compounds, in the wonders of steam and electricity, in mechanical appliances to abridge human labor. in astronomical

researches, in the explanation of the phenomena of the heavens, in the miracles which inventive genius has wrought, — seen in our ships, our manufactories, our printing-presses, our observatories, our fortifications, our laboratories, our mills, our machines to cultivate the earth, to make our clothes, to build our houses, to multiply our means of offence and defence, to make weak children do the work of Titans to measure our time with the accuracy of the planetary orbits, to use the sun itself in perpetuating our likenesses to distant generations, to cause a needle to guide the mariner with assurance on the darkest night, to propel a heavy ship against wind and tide without oars or sails, to make carriages ascend mountains without horses at the rate of thirty miles an hour, to convey intelligence with the speed of lightning from continent to continent and under oceans that ancient navigators never dared to cross, — these and other wonders attest an ingenuity and audacity of intellect which would have overwhelmed with amazement the most adventurous of Greeks and the most potent of Romans.

But the great discoveries and inventions to which we owe this marked superiority are either accidental or the result of generations of experiment, assisted by an immense array of ascertained facts from which safe inductions can be made. It is not, probably, the su-

periority of the European races over the Greeks and Romans to which we may ascribe the wonderful advance of modern society, but the particular direction which genius was made to take. Had the Greeks given the energy of their minds to mechanical forces as they did to artistic creations, they might have made wonderful inventions. But it was not so ordered by Providence. At that time the world was not in the stage of development when this particular direction of intellect could have been favored. The development of the physical sciences, with their infinite multiplicity and complexity, required more centuries of observation, collection and collation of facts, deductions from known phenomena, than the ancients had had to work with; while the more ethereal realms of philosophy, ethics, æsthetics, and religion, though needing keen study of Nature and of man, depended more upon inner spiritual forces, and less upon accumulated detail of external knowledge. Yet as there were some subjects which the Greeks and Romans seemed to exhaust, some fields of labor and thought in which they never have been and perhaps never will be surpassed, so some future age may direct its energies into channels that are as unknown to us as clocks and steam-engines were to the Greeks. This is the age of mechanism and of science; and mechanism and science sweep everything before them, and will probably be carried to their ut-

most capacity and development. After that the human mind may seek some new department, some new scope for its energies, and an age of new wonders may arise, — perhaps after the present dominant races shall have become intoxicated with the greatness of their triumphs and have shared the fate of the old monarchies of the East. But I would not speculate on the destinies of the European nations, whether they are to make indefinite advances until they occupy and rule the whole world, or are destined to be succeeded by nations as yet undeveloped, — savages, as their fathers were when Rome was in the fulness of material wealth and grandeur.

I have shown that in the field of artistic excellence, in literary composition, in the arts of government and legislation, and even in the realm of philosophical speculation, the ancients were our school-masters, and that among them were some men of most marvellous genius, who have had no superiors among us. But we do not see among them the exhibition of genius in what we call science, at least in its application to practical life. It would be difficult to show any department of science which the ancients carried to any considerable degree of perfection. Nevertheless, there were departments in which they made noble attempts, and in which they showed large capacity, even if they were unsuccessful in great practical results.

Astronomy was one of these. In this science such men as Eratosthenes, Aristarchus, Hipparchus, and Ptolemy were great lights of whom humanity may be proud; and had they been assisted by our modern inventions, they might have earned a fame scarcely eclipsed by that of Kepler and Newton. The old astronomers did little to place this science on a true foundation, but they showed great ingenuity, and discovered some truths which no succeeding age has repudiated. They determined the circumference of the earth by a method identical with that which would be employed by modern astronomers; they ascertained the position of the stars by right ascension and declination; they knew the obliquity of the ecliptic, and determined the place of the sun's apogee as well as its mean motion. Their calculations on the eccentricity of the moon prove that they had a rectilinear trigonometry and tables of chords. They had an approximate knowledge of parallax; they could calculate eclipses of the moon, and use them for the correction of their lunar tables. They understood spherical trigonometry, and determined the motions of the sun and moon, involving an accurate definition of the year and a method of predicting eclipses: they ascertained that the earth was a sphere, and reduced the phenomena of the heavenly bodies to uniform movements of circular orbits. We have settled by physical geography the

exact form of the earth, but the ancients arrived at their knowledge by astronomical reasoning. Says Whewell: —

“The reduction of the motions of the sun, moon, and five planets to circular orbits, as was done by Hipparchus, implies deep concentrated thought and scientific abstraction. The theories of eccentrics and epicycles accomplished the end of explaining all the known phenomena. The resolution of the apparent motions of the heavenly bodies into an assemblage of circular motions was a great triumph of genius, and was equivalent to the most recent and improved processes by which modern astronomers deal with such motions.”

Astronomy was probably born in Chaldæa as early as the time of Abraham. The glories of the firmament were impressed upon the minds of the rude primitive races with an intensity which we do not feel, with all the triumphs of modern science. The Chaldæan shepherds, as they watched their flocks by night, noted the movements of the planets, and gave names to the more brilliant constellations. Before religious rituals were established, before great superstitions arose, before poetry was sung, before musical instruments were invented, before artists sculptured marble or melted bronze, before coins were stamped, before temples arose, before diseases were healed by the arts of medicine, before commerce was known, those Oriental shep-

herds counted the anxious hours by the position of certain constellations. Astronomy is therefore the oldest of the ancient sciences, although it remained imperfect for more than four thousand years. The old Assyrians, Egyptians, and Greeks made but few discoveries which are valued by modern astronomers, but they laid the foundation of the science, and ever regarded it as one of the noblest subjects that could stimulate the faculties of man. It was invested with all that was religious and poetical.

The spacious level and unclouded horizon of Chaldæa afforded peculiar facilities of observation ; and its pastoral and contemplative inhabitants, uncontaminated by the vices and superstitions of subsequent ages, active-minded and fresh, discovered after a long observation of eclipses—some say extending over nineteen centuries—the cycle of two hundred and twenty-three lunations, which brings back the eclipses in the same order. Having once established their cycle, they laid the foundation for the most sublime of all the sciences. Callisthenes transmitted from Babylon to Aristotle a collection of observations of all the eclipses that preceded the conquests of Alexander, together with the definite knowledge which the Chaldæans had collected about the motions of the heavenly bodies. Such knowledge was rude and simple, and amounted to little beyond the fact that

there were spherical revolutions about an inclined axis, and that the poles pointed always to particular stars. The Egyptians also recorded their observations, from which it would appear that they observed eclipses at least sixteen hundred years before the beginning of our era, — which is not improbable, if the speculations of modern philosophers respecting the age of the world are entitled to credit. The Egyptians discovered by the rising of Sirius that the year consists of three hundred and sixty-five and one-quarter days; and this was their sacred year, in distinction from the civil, which consisted of three hundred and sixty-five days. They also had observed the courses of the planets, and could explain the phenomena of the stations and retrogradations; and it is asserted too that they regarded Mercury and Venus as satellites of the sun. Some have maintained that the obelisks which the Egyptians erected served the purpose of gnomons for determining the obliquity of the ecliptic, the altitude of the pole, and the length of the tropical year. It is thought even that the Pyramids, by the position of their sides toward the cardinal points, attest Egyptian acquaintance with a meridional line. The Chinese boast of having noticed and recorded a series of eclipses extending over a period of thirty-eight hundred and fifty-eight years; and it is probable that they anticipated the Greeks two thousand years in the discovery of the

Metonic cycle, — or the cycle of nineteen years, at the end of which time the new moons fall on the same days of the year. The Chinese also determined the obliquity of the ecliptic eleven hundred years before our era. The Hindus at a remote antiquity represented celestial phenomena with considerable exactness, and constructed tables by which the longitude of the sun and moon were determined, and dials to measure time. Bailly thinks that thirty-one hundred and two years before Christ astronomy was cultivated in Siam which hardly yields in accuracy to that which modern science has built on the theory of universal gravitation.

But the Greeks after all were the only people of antiquity who elevated astronomy to the dignity of a science. They however confessed that they derived their earliest knowledge from the Babylonian and Egyptian priests, while the priests of Thebes claimed to be the originators of exact astronomical observations. Diodorus asserts that the Chaldæans used the Temple of Belus, in the centre of Babylon, for their survey of the heavens. But whether the Babylonians or the Egyptians were the earliest astronomers is of little consequence, although the pedants make it a grave matter of investigation. All we know is that astronomy was cultivated by both Babylonians and Egyptians, and that they made but very limited attainments. They approximated to the truth in refer-

ence to the solar year, by observing the equinoxes and solstices and the heliacal rising of particular stars.

The early Greek philosophers who visited Egypt and the East in search of knowledge, found very little to reward their curiosity or industry, — not much beyond preposterous claims to a high antiquity, and to an esoteric wisdom which has not yet been revealed. Plato and Eudoxus spent thirteen years in Heliopolis for the purpose of extracting the scientific knowledge of the Egyptian priests, yet they learned but little beyond the fact that the solar year was a trifle beyond three hundred and sixty-five days. No great names have come down to us from the priests of Babylon or Egypt; no one gained an individual reputation. The Chaldaean and Egyptian priests may have furnished the raw material of observation to the Greeks, but the latter alone possessed the scientific genius by which undigested facts were converted into a symmetrical system. The East never gave valuable knowledge to the West; it gave the tendency to religious mysticism, which in its turn tended to superstition. Instead of astronomy, it gave astrology; instead of science, it gave magic, incantations, and dreams. The Eastern astronomers connected their astronomy with divination from the stars, and made their antiquity reach back to two hundred and seventy thousand years.

There were soothsayers in the time of Daniel, and magicians, exorcists, and interpreters of signs. They were not men of scientific research, seeking truth; it was power they sought, by perverting the intellect of the people. The astrology of the East was founded on the principle that a star or constellation presided over the birth of an individual, and that it either portended his fate, or shed a good or bad influence upon his future life. The star which looked upon a child at the hour of his birth was called the "hōroscopus," and the peculiar influence of each planet was determined by the astrologers. The superstitions of Egypt and Chaldæa unfortunately spread among both the Greeks and Romans, and these were about all that the Western nations learned from the boastful priests of occult Oriental science. Whatever was known of real value among the ancients is due to the earnest inquiries of the Greeks.

And yet their researches were very unsatisfactory until the time of Hipparchus. The primitive knowledge was almost nothing. The Homeric poems regarded the earth as a circular plain bounded by the heaven, which was a solid vault or hemisphere, with its concavity turned downward. This absurdity was believed until the time of Herodotus, five centuries after; nor was it exploded fully in the time of Aristotle. The sun, moon, and stars were supposed to

move upon or with the inner surface of the heavenly hemisphere, and the ocean was thought to gird the earth around as a great belt, into which the heavenly bodies sank at night. Homer believed that the sun arose out of the ocean, ascended the heaven, and again plunged into the ocean, passing under the earth, and producing darkness. The Greeks even personified the sun as a divine charioteer driving his fiery steeds over the steep of heaven, until he bathed them at evening in the western waves. Apollo became the god of the sun, as Diana was the goddess of the moon. But the early Greek inquirers did not attempt to explain how the sun found his way from the west back again to the east; they merely took note of the diurnal course, the alternation of day and night, the number of the seasons, and their regular successions. They found the points of the compass by determining the recurrence of the equinoxes and solstices; but they had no conception of the ecliptic, — of that great circle in the heaven formed by the sun's annual course, — and of its obliquity when compared with our equator. Like the Egyptians and Babylonians, the Greeks ascertained the length of the year to be three hundred and sixty-five days; but perfect accuracy was lacking, for want of scientific instruments and of recorded observations of the heavenly bodies. The Greeks had not even a common chronological era for the designa-

tion of years. Herodotus informs us that the Trojan War preceded his time by eight hundred years: he merely states the interval between the event in question and his own time; he had certain data for distant periods. The Greeks reckoned dates from the Trojan War, and the Romans from the building of their city. The Greeks also divided the year into twelve months, and introduced the intercalary circle of eight years, although the Romans disused it afterward, until the calendar was reformed by Julius Cæsar. Thus there was no scientific astronomical knowledge worth mentioning among the primitive Greeks.

Immense research and learning have been expended by modern critics to show the state of scientific astronomy among the Greeks. I am amazed equally at the amount of research and its comparative worthlessness; for what addition to science can be made by an enumeration of the puerilities and errors of the Greeks, and how wasted and pedantic the learning which ransacks all antiquity to prove that the Greeks adopted this or that absurdity!¹

The earliest historic name associated with astronomy in Greece was Thales, the founder of the Ionic school

¹ The style of modern historical criticism is well exemplified in the discussions of the Germans whether the Arx on the Capitoline Hill occupied the northeastern or southwestern corner, which take up nearly one half of the learned article on the Capitoline in Smith's Dictionary.

of philosophers. He is reported to have made a visit to Egypt, to have fixed the year at three hundred and sixty-five days, to have determined the course of the sun from solstice to solstice, and to have calculated eclipses. He attributed an eclipse of the moon to the interposition of the earth between the sun and moon, and an eclipse of the sun to the interposition of the moon between the sun and earth, — and thus taught the rotundity of the earth, sun, and moon. He also determined the ratio of the sun's diameter to its apparent orbit. As he first solved the problem of inscribing a right-angled triangle in a circle, he is the founder of geometrical science in Greece. He left, however, nothing to writing; hence all accounts of him are confused, — some doubting even if he made the discoveries attributed to him. His philosophical speculations, which science rejects, — such as that water is the principle of all things, — are irrelevant to a description of the progress of astronomy. That he was a great light no one questions, considering the ignorance with which he was surrounded.

Anaximander, who followed Thales in philosophy, held to puerile doctrines concerning the motions and nature of the stars, which it is useless to repeat. His addition to science, if he made any, was in treating the magnitudes and distances of the planets. He constructed geographical charts, and attempted to deline-

ate the celestial sphere, and to measure time with a gnomon, or time-pillar, by the motion of its shadow upon a dial.¹

Anaximenes of Miletus taught, like his predecessors, crude notions of the sun and stars, and speculated on the nature of the moon, but did nothing to advance his science on true grounds, except by the construction of sun-dials. The same may be said of Heraclitus, Xenophanes, Parmenides, and Anaxagoras: they were great men, but they gave to the world mere speculations, some of which are very puerile. They all held to the idea that the heavenly bodies revolved around the earth, and that the earth was a plain; but they explained eclipses, and supposed that

¹ Dr. E. H. Knight, in his "American Mechanical Dictionary" (i. 692), cites the Scriptural account of the beautiful altar seen by King Ahaz of Jerusalem, in Damascus, when he went thither to greet Tiglath-Pileser, the Assyrian who had helped him against his Samarian enemy. Ahaz erected a similar altar at Jerusalem, and also a *sun-dial*, the same one mentioned in the account of the miraculous cure of his son Hezekiah. "This," says Dr. Knight, "was probably the first dial on record, and is one hundred and forty years before Thales, and nearly four hundred before Plato and Aristotle, and just a little previous to the lunar eclipses observed at Babylon, as recorded by Ptolemy. . . . The Hebrew word [for this dial] is said by Colonel White of the Bengal army to signify a *staircase*, which much strengthens the inference that it was like the equinoctial dial of the Indian nations and of Mesopotamia, from whence its pattern is assumed to have been derived."

the moon derived its light from the sun. Some of them knew the difference between the planets and the fixed stars. Anaxagoras scouted the notion that the sun was a god, and supposed it to be a mass of ignited stone,—for which he was called an atheist.

Socrates, who belonged to another school, avoided all barren speculations concerning the universe, and confined himself to human actions and interests. He looked even upon geometry in a very practical way, valuing it only so far as it could be made serviceable to land-measuring. As for the stars and planets, he supposed it was impossible to arrive at a true knowledge of them, and regarded speculations upon them as useless.

It must be admitted that the Greek astronomers, however barren were their general theories, laid the foundation of science. Pythagoras taught the obliquity of the ecliptic, probably learned in Egypt, and the identity of the morning and evening stars. It is supposed that he maintained that the sun was the centre of the universe, and that the earth revolved around it; but this he did not demonstrate, and his whole system was unscientific, assuming certain arbitrary principles, from which he reasoned deductively. “He assumed that fire is more worthy than earth; that the more worthy place must be given to the more worthy; that the extremity is more worthy than the

intermediate parts,—and hence, as the centre is an extremity, the place of fire is at the centre of the universe, and that therefore the earth and other heavenly bodies move round the fiery centre.” But this was no heliocentric system, since the sun moved, like the earth, in a circle around the central fire. This was merely the work of the imagination, utterly unscientific, though bold and original. Nor did this hypothesis gain credit, since it was the fixed opinion of philosophers that the earth was the centre of the universe, around which the sun, moon, and planets revolved. But the Pythagoreans were the first to teach that the motions of the sun, moon, and planets are circular and equable. Their idea that the celestial bodies emitted a sound, and were combined into a harmonious symphony, was exceedingly crude, however beautiful. “The music of the spheres” belongs to poetry, as well as to the speculations of Plato.

Eudoxus, in the fifth century before Christ, contributed to science by making a descriptive map of the heavens, which was used as a manual of sidereal astronomy to the sixth century of our era.

The error of only one hundred and ninety days in the periodic time of Saturn shows that there had been for a long time close observations. Aristotle—whose comprehensive intellect, like that of Bacon, took in all forms of knowledge—condensed all that was known

in his day into a treatise concerning the heavens. He regarded astronomy as more intimately connected with mathematics than any other branch of science. But even he did not soar far beyond the philosophers of his day, since he held to the immobility of the earth, — the grand error of the ancients. Some few speculators in science (like Heraclitus of Pontus, and Hicetas) conceived a motion of the earth itself upon its axis, so as to account for the apparent motion of the sun; but they also thought it was in the centre of the universe.

The introduction of the gnomon (time-pillar) and dial into Greece advanced astronomical knowledge, since they were used to determine the equinoxes and solstices, as well as parts of the day. Meton set up a sun-dial at Athens in the year 433 B. C., but the length of the hour varied with the time of the year, since the Greeks divided the day into twelve equal parts. Dials were common at Rome in the time of Plautus, 224 B. C.; but there was a difficulty in using them, since they failed at night and in cloudy weather, and could not be relied on. Hence the introduction of water-clocks instead.

Aristarchus is said to have combated (280 B. C.) the geocentric theory so generally received by philosophers, and to have promulgated the hypothesis "that the fixed stars and the sun are immovable; that the earth is carried round the sun in the circumference of a

circle of which the sun is the centre; and that the sphere of the fixed stars, having the same centre as the sun, is of such magnitude that the orbit of the earth is to the distance of the fixed stars as the centre of the sphere of the fixed stars is to its surface." Aristarchus also, according to Plutarch, explained the apparent annual motion of the sun in the ecliptic by supposing the orbit of the earth to be inclined to its axis. There is no evidence that this great astronomer supported his heliocentric theory with any geometrical proof, although Plutarch maintains that he demonstrated it. This theory gave great offence, especially to the Stoics; and Cleanthes, the head of the school at that time, maintained that the author of such an impious doctrine should be punished. Aristarchus left a treatise "On the Magnitudes and Distances of the Sun and Moon;" and his methods to measure the apparent diameters of the sun and moon are considered theoretically sound by modern astronomers, but practically inexact owing to defective instruments. He estimated the diameter of the sun at the seven hundred and twentieth part of the circumference of the circle which it describes in its diurnal revolution, which is not far from the truth; but in this treatise he does not allude to his heliocentric theory.

Archimedes of Syracuse, born 287 B. C., is stated to have measured the distance of the sun, moon, and

planets, and he constructed an orrery in which he exhibited their motions. But it was not in the Grecian colony of Syracuse, but of Alexandria, that the greatest light was shed on astronomical science. Here Aristarchus resided, and also Eratosthenes, who lived between the years 276 and 196 B. C. The latter was a native of Athens, but was invited by Ptolemy Euergetes to Alexandria, and placed at the head of the library. His great achievement was the determination of the circumference of the earth. This was done by measuring on the ground the distance between Syene, a city exactly under the tropic, and Alexandria, situated on the same meridian. The distance was found to be five thousand stadia. The meridional distance of the sun from the zenith of Alexandria he estimated to be $7^{\circ} 12'$, or a fiftieth part of the circumference of the meridian. Hence the circumference of the earth was fixed at two hundred and fifty thousand stadia, — which is not very different from our modern computation. The circumference being known, the diameter of the earth was easily determined. The moderns have added nothing to this method. He also calculated the diameter of the sun to be twenty-seven times greater than that of the earth, and the distance of the sun from the earth to be eight hundred and four million stadia, and that of the moon seven hundred and eighty thousand stadia, — a close approximation to the truth.

Astronomical science received a great impulse from the school of Alexandria, the greatest light of which was Hipparchus, who flourished early in the second century before Christ. He laid the foundation of astronomy upon a scientific basis. "He determined," says Delambre, "the position of the stars by right ascensions and declinations, and was acquainted with the obliquity of the ecliptic. He determined the inequality of the sun and the place of its apogee, as well as its mean motion; the mean motion of the moon, of its nodes and apogee; the equation of the moon's centre and the inclination of its orbit. He calculated eclipses of the moon, and used them for the correction of his lunar tables, and he had an approximate knowledge of parallax." His determination of the motions of the sun and moon, and his method of predicting eclipses evince great mathematical genius. But he combined with this determination a theory of epicycles and eccentrics which modern astronomy discards. It was however a great thing to conceive of the earth as a solid sphere, and to reduce the phenomena of the heavenly bodies to uniform motions in circular orbits. "That Hipparchus should have succeeded in the first great steps of the resolution of the heavenly bodies into circular motions is a circumstance," says Whewell, "which gives him one of the most distinguished places in the roll of great astronomers." But he did even

more than this: he discovered that apparent motion of the fixed stars round the axis or the ecliptic, which is called the Precession of the Equinoxes, — one of the greatest discoveries in astronomy. He maintained that the precession was not greater than fifty-nine seconds, and not less than thirty-six seconds. Hipparchus also framed a catalogue of the stars, and determined their places with reference to the ecliptic by their latitudes and longitudes. Altogether he seems to have been one of the greatest geniuses of antiquity, and his works imply a prodigious amount of calculation.

Astronomy made no progress for three hundred years, although it was expounded by improved methods. Posidonius constructed an orrery, which exhibited the diurnal motions of the sun, moon, and five planets. Posidonius calculated the circumference of the earth to be two hundred and forty thousand stadia, by a different method from Eratosthenes. The barrenness of discovery from Hipparchus to Ptolemy, — the Alexandrian mathematician, astronomer, and geographer in the second century of the Christian era, — in spite of the patronage of the royal Ptolemies of Egypt, was owing to the want of instruments for the accurate measure of time (like our clocks), to the imperfection of astronomical tables, and to the want of telescopes. Hence the great Greek astronomers were unable to realize their theories. Their theories however were

magnificent, and evinced great power of mathematical combination ; but what could they do without that wondrous instrument by which the human eye indefinitely multiplies its power ? Moreover, the ancients had no accurate almanacs, since the care of the calendar belonged not so much to the astronomers as to the priests, who tampered with the computation of time for sacerdotal objects. The calendars of different communities differed. Hence Julius Cæsar rendered a great service to science by the reform of the Roman calendar, which was exclusively under the control of the college of pontiffs, or general religious overseers. The Roman year consisted of three hundred and fifty-five days ; and in the time of Cæsar the calendar was in great confusion, being ninety days in advance, so that January was an autumn month. He inserted the regular intercalary month of twenty-three days, and two additional ones of sixty-seven days. These, together with ninety days, were added to three hundred and sixty-five days, making a year of transition of four hundred and forty-five days, by which January was brought back to the first month in the year after the winter solstice ; and to prevent the repetition of the error, he directed that in future the year should consist of three hundred and sixty-five and one-quarter days, which he effected by adding one day to the months of April, June, September, and November,

and two days to the months of January, Sextilis, and December, making an addition of ten days to the old year of three hundred and fifty-five. And he provided for a uniform intercalation of one day in every fourth year, which accounted for the remaining quarter of a day.

Cæsar was a student of astronomy, and always found time for its contemplation. He is said even to have written a treatise on the motion of the stars. He was assisted in his reform of the calendar by Sosigines, an Alexandrian astronomer. He took it out of the hands of the priests, and made it a matter of pure civil regulation. The year was defined by the sun, and not as before by the moon.

Thus the Romans were the first to bring the scientific knowledge of the Greeks into practical use; but while they measured the year with a great approximation to accuracy, they still used sun-dials and water-clocks to measure diurnal time. Yet even these were not constructed as they should have been. The hour-marks on the sun-dial were all made equal, instead of varying with the periods of the day, — so that the length of the hour varied with the length of the day. The illuminated interval was divided into twelve equal parts; so that if the sun rose at five A. M., and set at eight P. M., each hour was equal to eighty minutes. And this rude method of measure-

ment of diurnal time remained in use till the sixth century. Clocks, with wheels and weights, were not invented till the twelfth century.

The last great light among the ancients in astronomical science was Ptolemy, who lived from 100 to 170 A. D., in Alexandria. He was acquainted with the writings of all the previous astronomers, but accepted Hipparchus as his guide. He held that the heaven is spherical and revolves upon its axis; that the earth is a sphere, and is situated within the celestial sphere, and nearly at its centre; that it is a mere point in reference to the distance and magnitude of the fixed stars, and that it has no motion. He adopted the views of the ancient astronomers, who placed Saturn, Jupiter, and Mars next under the sphere of the fixed stars, then the sun above Venus and Mercury, and lastly the moon next to the earth. But he differed from Aristotle, who conceived that the earth revolves in an orbit around the centre of the planetary system, and turns upon its axis,—two ideas in common with the doctrines which Copernicus afterward unfolded. But even Ptolemy did not conceive the heliocentric theory,—the sun the centre of our system. Archimedes and Hipparchus both rejected this theory.

In regard to the practical value of the speculations of the ancient astronomers, it may be said that had they possessed clocks and telescopes, their scientific

methods would have sufficed for all practical purposes. The greatness of modern discoveries lies in the great stretch of the perceptive powers, and the magnificent field they afford for sublime contemplation. "But," as Sir G. Cornwall Lewis remarks, "modern astronomy is a science of pure curiosity and is directed exclusively to the extension of knowledge in a field which human interests can never enter. The periodic time of Uranus, the nature of Saturn's ring, and the occultation of Jupiter's satellites are as far removed from the concerns of mankind as the heliacal rising of Sirius, or the northern position of the Great Bear." This may seem to be a utilitarian view, with which those philosophers who have cultivated science for its own sake, finding in the same a sufficient reward, can have no sympathy.

The upshot of the scientific attainments of the ancients, in the magnificent realm of the heavenly bodies, would seem to be that they laid the foundation of all the definite knowledge which is useful to mankind; while in the field of abstract calculation they evinced reasoning and mathematical powers that have never been surpassed. Eratosthenes, Archimedes, and Hipparchus were geniuses worthy to be placed by the side of Kepler, Newton, and La Place, and all ages will reverence their efforts and their memory. It is truly surprising that with their imperfect in-

struments, and the absence of definite data, they reached a height so sublime and grand. They explained the doctrine of the sphere and the apparent motions of the planets, but they had no instruments capable of measuring angular distances. The ingenious epicycles of Ptolemy prepared the way for the elliptic orbits and laws of Kepler, which in turn conducted Newton to the discovery of the law of gravitation, — the grandest scientific discovery in the annals of our race.

Closely connected with astronomical science was geometry, which was first taught in Egypt, — the nurse and cradle of ancient wisdom. It arose from the necessity of adjusting the landmarks disturbed by the inundations of the Nile. There is hardly any trace of geometry among the Hebrews. Among the Hindus there are some works on this science, of great antiquity. Their mathematicians knew the rule for finding the area of a triangle from its sides, and also the celebrated proposition concerning the squares on the sides of the right-angled triangle. The Chinese, it is said, also knew this proposition before it was known to the Greeks, among whom it was first propounded by Thales. He applied a circle to the measurement of angles. Anaximander made geographical charts, which required considerable geometrical knowl-

edge. Anaxagoras employed himself in prison in attempting to square the circle. Thales, as has been said, discovered the important theorem that in a right-angled triangle the squares on the sides containing the right angle are together equal to the square on the opposite side of it. Pythagoras discovered that of all figures having the same boundary, the circle among plane figures and the sphere among solids are the most capacious. Hippocrates treated of the duplication of the cube, and wrote elements of geometry, and knew that the area of a circle was equal to a triangle whose base is equal to its circumference and altitude equal to its radius. The disciples of Plato invented conic sections, and discovered the geometrical foci.

It was however reserved for Euclid to make his name almost synonymous with geometry. He was born 323 B. C., and belonged to the Platonic sect, which ever attached great importance to mathematics. His "Elements" are still in use, as nearly perfect as any human production can be. They consist of thirteen books. The first four are on plane geometry; the fifth is on the theory of proportion, and applies to magnitude in general; the seventh, eighth, and ninth are on arithmetic; the tenth on the arithmetical characteristics of the division of a straight line; the eleventh and twelfth on the elements of solid geometry; the thirteenth on the regular solids. These "Elements"

soon became the universal study of geometers throughout the civilized world; they were translated into the Arabic, and through the Arabians were made known to mediæval Europe. There can be no doubt that this work is one of the highest triumphs of human genius, and it has been valued more than any single monument of antiquity; it is still a text-book, in various English translations, in all our schools. Euclid also wrote various other works, showing great mathematical talent.

Perhaps a greater even than Euclid was Archimedes, born 287 B. C. He wrote on the sphere and cylinder, terminating in the discovery that the solidity and surface of a sphere are two thirds respectively of the solidity and surface of the circumscribing cylinder. He also wrote on conoids and spheroids. "The properties of the spiral and the quadrature of the parabola were added to ancient geometry by Archimedes, the last being a great step in the progress of the science, since it was the first curvilinear space legitimately squared." Modern mathematicians may not have the patience to go through his investigations, since the conclusions he arrived at may now be reached by shorter methods; but the great conclusions of the old geometers were reached by only prodigious mathematical power. Archimedes is popularly better known as the inventor of engines of war and of various ingeni-

ous machines than as a mathematician, great as were his attainments in this direction. His theory of the lever was the foundation of statics till the discovery of the composition of forces in the time of Newton, and no essential addition was made to the principles of the equilibrium of fluids and floating bodies till the time of Stevin, in 1608. Archimedes detected the mixture of silver in a crown of gold which his patron, Hiero of Syracuse, ordered to be made; and he invented a water-screw for pumping water out of the hold of a great ship which he had built. He contrived also the combination of pulleys, and he constructed an orrery to represent the movement of the heavenly bodies. He had an extraordinary inventive genius for discovering new provinces of inquiry and new points of view for old and familiar objects. Like Newton, he had a habit of abstraction from outward things, and would forget to take his meals. He was killed by Roman soldiers when Syracuse was taken; and the Sicilians so soon forgot his greatness that in the time of Cicero they did not know where his tomb was.

Eratosthenes was another of the famous geometers of antiquity, and did much to improve geometrical analysis. He was also a philosopher and geographer. He gave a solution of the problem of the duplication of the cube, and applied his geometrical knowledge to the measurement of the magnitude of the earth. —

being one of the first who brought mathematical methods to the aid of astronomy, which in our day is almost exclusively the province of the mathematician.

Apollonius of Perga, probably about forty years younger than Archimedes, and his equal in mathematical genius, was the most fertile and profound writer among the ancients who treated of geometry. He was called the Great Geometer. His most important work is a treatise on conic sections, which was regarded with unbounded admiration by contemporaries, and in some respects is unsurpassed by any thing produced by modern mathematicians. He however made use of the labors of his predecessors, so that it is difficult to tell how far he is original. But all men of science must necessarily be indebted to those who have preceded them. Even Homer, in the field of poetry, made use of the bards who had sung for a thousand years before him; and in the realms of philosophy the great men of all ages have built up new systems on the foundations which others have established. If Plato or Aristotle had been contemporaries with Thales, would they have matured so wonderful a system of dialectics? Yet if Thales had been contemporaneous with Plato, he might have added to the great Athenian's sublime science even more than did Aristotle. So of the great mathematicians of antiquity; they were all wonderful men, and worthy to

be classed with the Newtons and Keplers of our times. Considering their means and the state of science, they made as *great* though not as *fortunate* discoveries,—discoveries which show patience, genius, and power of calculation. Apollonius was one of these,—one of the master intellects of antiquity, like Euclid and Archimedes; one of the master intellects of all ages, like Newton himself. I might mention the subjects of his various works, but they would not be understood except by those familiar with mathematics.

Other famous geometers could also be named, but such men as Euclid, Archimedes, and Apollonius are enough to show that geometry was cultivated to a great extent by the philosophers of antiquity. It progressively advanced, like philosophy itself, from the time of Thales until it had reached the perfection of which it was capable, when it became merged into astronomical science. It was cultivated more particularly by the disciples of Plato, who placed over his school this inscription: "Let no one ignorant of geometry enter here." He believed that the laws by which the universe is governed are in accordance with the doctrines of mathematics. The same opinion was shared by Pythagoras, the great founder of the science, whose main formula was that *number* is the essence or first principle of all things. No thinkers ever surpassed the Greeks in originality and profound-

ity; and mathematics, being highly prized by them, were carried to the greatest perfection their method would allow. They did not understand algebra, by the application of which to geometry modern mathematicians have climbed to greater heights than the ancients; but then it is all the more remarkable that without the aid of algebraic analysis they were able to solve such difficult problems as occupied the minds of Archimedes and Apollonius. No positive science can boast of such rapid development as geometry for two or three hundred years before Christ, and never was the intellect of man more severely tasked than by the ancient mathematicians.

No empirical science can be carried to perfection by any one nation or in any particular epoch; it can only expand with the progressive developments of the human race itself. Nevertheless, in that science which for three thousand years has been held in the greatest honor, and which is one of the three great liberal professions of our modern times, the ancients, especially the Greeks, made considerable advance. The science of medicine, having in view the amelioration of human misery and the prolongation of life itself, was very early cultivated. It was, indeed, in old times another word for *physics*, — the science of Nature, — and the *physician* was the observer and expounder of

physics. The physician was supposed to be acquainted with the secrets of Nature, — that is, the knowledge of drugs, of poisons, of antidotes to them, and the way to administer them. He was also supposed to know the process of preserving the body after death. Thus Joseph, seventeen hundred years before the birth of Christ, commanded his physician to embalm the body of his father; and the process of embalming was probably known to the Egyptians before the period when history begins. Helen, of Trojan fame, put into wine a drug that “frees man from grief and anger, and causes oblivion of all ills.” Solomon was a great botanist, — a realm with which the science of medicine is indissolubly connected. The origin of Hindu medicine is lost in remote antiquity. The Ayur Veda, written nine hundred years before Hippocrates was born, sums up the knowledge of previous periods relating to obstetric surgery, to general pathology, to the treatment of insanity, to infantile diseases, to toxicology, to personal hygiene, and to diseases of the generative functions.

Thus Hippocrates, the father of European medicine, must have derived his knowledge not merely from his own observations, but from the writings of men unknown to us and from systems practised for an indefinite period. The real founders of Greek medicine are fabled characters, like Hercules and Æsculapius, —

that is, benefactors whose fictitious names alone have descended to us. They are mythical personages, like Hermes and Chiron. Twelve hundred years before Christ temples were erected to Æsculapius in Greece, the priests of which were really physicians, and the temples themselves hospitals. In them were practised rites apparently mysterious, but which modern science calls by the names of mesmerism, hydropathy, the use of mineral springs, and other essential elements of empirical science. And these temples were also medical schools. That of Cos gave birth to Hippocrates, and it was there that his writings were begun. Pythagoras — for those old Grecian philosophers were the fathers of all wisdom and knowledge, in mathematics and empirical sciences as well as philosophy itself — studied medicine in the schools of Egypt, Phœnicia, Chaldæa, and India, and came in conflict with sacerdotal power, which has ever been antagonistic to new ideas in science. He travelled from town to town as a teacher or lecturer, establishing communities in which *medicine* as well as *numbers* was taught.

The greatest name in medical science in ancient or in modern times, the man who did the most to advance it, the greatest medical genius of whom we have any early record, was Hippocrates, born on the island of Cos, 460 B. C., of the great Æsculapian family. He received his instruction from his father. We know

scarcely more of his life than we do of Homer himself, although he lived in the period of the highest splendor of Athens. Even his writings, like those of Homer, are thought by some to be the work of different men. They were translated into Arabic, and were no slight means of giving an impulse to the Saracenic schools of the Middle Ages in that science in which the Saracens especially excelled. The Hippocratic collection consists of more than sixty works, which were held in the highest estimation by the ancient physicians. Hippocrates introduced a new era in medicine, which before his time had been monopolized by the priests. He carried out a system of severe induction from the observation of facts, and is as truly the creator of the inductive method as Bacon himself. He abhorred theories which could not be established by facts; he was always open to conviction, and candidly confessed his mistakes; he was conscientious in the practice of his profession, and valued the success of his art more than silver and gold. The Athenians revered Hippocrates for his benevolence as well as genius. The great principle of his practice was *trust in Nature*; hence he was accused of allowing his patients to die. But this principle has many advocates among scientific men in our day; and some suppose that the whole successful practice of Homœopathy rests on the primal principle which Hippocrates advanced, although

the philosophy of it claims a distinctly scientific basis in the principle *similia similibus curantur*. Hippocrates had great skill in diagnosis, by which medical genius is most severely tested; his practice was cautious and timid in contrast with that of his contemporaries. He is the author of the celebrated maxim, "Life is short and art is long." He divides the causes of disease into two principal classes, — the one comprehending the influence of seasons, climates, and other external forces; the other including the effects of food and exercise. To the influence of climate he attributes the conformation of the body and the disposition of the mind; to a vicious system of diet he attributes innumerable forms of disease. For more than twenty centuries his pathology was the foundation of all the medical sects. He was well acquainted with the medicinal properties of drugs, and was the first to assign three periods to the course of a malady. He knew but little of surgery, although he was in the habit of bleeding, and often employed the knife; he was also acquainted with cupping, and used violent purgatives. He was not aware of the importance of the pulse, and confounded the veins with the arteries. Hippocrates wrote in the Ionic dialect, and some of his works have gone through three hundred editions, so highly have they been valued. His authority passed away, like that of Aristotle, on the revival of science

in Europe. Yet who have been greater ornaments and lights than these two distinguished Greeks?

The school of Alexandria produced eminent physicians, as well as mathematicians, after the glory of Greece had departed. So highly was it esteemed that Galen in the second century, — born in Greece, but famous in the service of Rome, — went there to study, five hundred years after its foundation. It was distinguished for inquiries into scientific anatomy and physiology, for which Aristotle had prepared the way. Galen was the Humboldt of his day, and gave great attention to physics. In eight books he developed the general principles of natural science known to the Greeks. On the basis of the Aristotelian researches, the Alexandrian physicians carried out extensive inquiries in physiology. Herophilus discovered the fundamental principles of neurology, and advanced the anatomy of the brain and spinal cord.

Although the Romans had but little sympathy with science or philosophy, being essentially political and warlike in their turn of mind, yet when they had conquered the world, and had turned their attention to arts, medicine received a good share of their attention. The first physicians in Rome were Greek slaves. Of these was Asclepiades, who enjoyed the friendship of Cicero. It is from him that the popular medical

theories as to the "pores" have descended. He was the inventor of the shower-bath. Celsus wrote a work on medicine which takes almost equal rank with the Hippocratic writings.

Medical science at Rome culminated in Galen, as it did at Athens in Hippocrates. Galen was patronized by Marcus Aurelius, and availed himself of all the knowledge of preceding naturalists and physicians. He was born at Pergamos about the year 130 A.D., where he learned, under able masters, anatomy, pathology, and therapeutics. He finished his studies at Alexandria, and came to Rome at the invitation of the Emperor. Like his imperial patron, Galen was one of the brightest ornaments of the heathen world, and one of the most learned and accomplished men of any age. He left five hundred treatises, most of them relating to some branch of medical science, which give him the name of being one of the most voluminous of authors. His celebrity is founded chiefly on his anatomical and physiological works. He was familiar with practical anatomy, deriving his knowledge from dissection. His observations about health are practical and useful; he lays great stress on gymnastic exercises, and recommends the pleasures of the chase, the cold bath in hot weather, hot baths for old people, the use of wine, and three meals a day. The great principles of his practice were that disease

is to be overcome by that which is contrary to the disease itself,—hence the name Allopathy, invented by the founder of Homœopathy to designate the fundamental principle of the general practice,—and that nature is to be preserved by that which has relation with nature. His “Commentaries on Hippocrates” served as a treasure of medical criticism, from which succeeding annotators borrowed. No one ever set before the medical profession a higher standard than Galen advanced, and few have more nearly approached it. He did not attach himself to any particular school, but studied the doctrines of each. The works of Galen constituted the last production of ancient Roman medicine, and from his day the decline in medical science was rapid, until it was revived among the Arabs.

The physical sciences, it must be confessed, were not carried by the ancients to any such length as geometry and astronomy. In physical geography they were particularly deficient. Yet even this branch of knowledge can boast of some eminent names. When men sailed timidly along the coasts, and dared not explore distant seas, the true position and characteristics of countries could not be ascertained with the definiteness that it is at present. But geography was not utterly neglected in those early times, nor was natural history.

Herodotus gives us most valuable information respecting the manners and customs of Oriental and barbarous nations; and Pliny wrote a *Natural History* in thirty-seven books, which is compiled from upwards of two thousand volumes, and refers to twenty thousand matters of importance. He was born 23 A. D., and was fifty-six when the eruption of Vesuvius took place, which caused his death. Pliny cannot be called a scientific genius in the sense understood by modern savants; nor was he an original observer,—his materials being drawn up second-hand, like a modern encyclopædia. Nor did he evince great judgment in his selection: he had a great love of the marvellous, and his work was often unintelligible; but it remains a wonderful monument of human industry. His *Natural History* treats of everything in the natural world,—of the heavenly bodies, of the elements, of thunder and lightning, of the winds and seasons, of the changes and phenomena of the earth, of countries and nations, of seas and rivers, of men, animals, birds, fishes, and plants, of minerals and medicines and precious stones, of commerce and the fine arts. He is full of errors, but his work is among the most valuable productions of antiquity. Buffon pronounced his *Natural History* to contain an infinity of knowledge in every department of human occupation, conveyed in a dress ornate and brilliant. It is a

literary rather than a scientific monument, and as such it is wonderful. In strict scientific value, it is inferior to the works of modern research; but there are few minds, even in these times, who have directed inquiries to such a variety of subjects as are treated in Pliny's masterpiece.

If we would compare the geographical knowledge of the ancients with that of the moderns, we confess to the immeasurable inferiority of the ancients.

Eratosthenes, though more properly an astronomer, and the most distinguished among the ancients, was also a considerable writer on geography, indeed, the first who treated the subject systematically, although none of his writings have reached us. The improvements he pointed out were applied by Ptolemy himself. His work was a presentation of the geographical knowledge known in his day, so far as geography is the science of determining the position of places on the earth's surface. When Eratosthenes began his labors, in the third century before Christ, it was known that the surface of the earth was spherical; he established parallels of latitude and longitude, and attempted the difficult undertaking of measuring the circumference of the globe by the actual measurement of a segment of one of its great circles.

Hipparchus (beginning of second century before Christ) introduced into geography a great improve-

ment; namely, the relative situation of places, by the same process that he determined the positions of the heavenly bodies. He also pointed out how longitude might be determined by observing the eclipses of the sun and moon. This led to the construction of maps; but none have reached us except those that were used to illustrate the geography of Ptolemy. Hipparchus was the first who raised geography to the rank of a science. He starved himself to death, being tired of life.

Posidonius, who was nearly a century later, determined the arc of a meridian between Rhodes and Alexandria to be a forty-eighth part of the whole circumference, — an enormous calculation, yet a remarkable one in the infancy of astronomical science. His writings on history and geography are preserved only in quotations by Cicero, Strabo, and others.

Geographical knowledge however was most notably advanced by Strabo, who lived in the Augustan era; although his researches were chiefly confined to the Roman empire. Strabo was, like Herodotus, a great traveller, and much of his geographical information is the result of his own observations. It is probable he was much indebted to Eratosthenes, who preceded him by three centuries. The authorities of Strabo were chiefly Greek, but his work is defective from the imperfect notions which the ancients had of astronomy;

so that the determination of the earth's figure by the measure of latitude and longitude, the essential foundation of geographical description, was unknown. The enormous strides which all forms of physical science have made since the discovery of America throw all ancient descriptions and investigations into the shade, and Strabo appears at as great disadvantage as Pliny or Ptolemy; yet the work of Strabo, considering his means, and the imperfect knowledge of the earth's surface and astronomical science in his day, was really a great achievement. He treats of the form and magnitude of the earth, and devotes eight books to Europe, six to Asia, and one to Africa. The description of places belongs to Strabo, whose work was accepted as the text-book of the science till the fifteenth century, for in his day the Roman empire had been well surveyed. He maintained that the earth is spherical, and established the terms *longitude* and *latitude*, which Eratosthenes had introduced, and computed the earth to be one hundred and eighty thousand stadia in circumference, and a degree to be five hundred stadia in length, or sixty-two and a-half Roman miles. His estimates of the length of a degree of latitude were nearly correct; but he made great errors in the degrees of longitude, making the length of the world from east to west too great, which led to the belief in the practicability of a western passage to India.

He also assigned too great length to the Mediterranean, arising from the difficulty of finding the longitude with accuracy. But it was impossible, with the scientific knowledge of his day, to avoid errors, and we are surprised that he made so few.

Whatever may be said of the accuracy of the great geographer of antiquity, it cannot be denied that he was a man of immense research and learning. His work in seventeen books is one of the most valuable that have come down from antiquity, both from the discussions which run through it, and the curious facts which can be found nowhere else. It is scarcely fair to estimate the genius of Strabo by the correctness and extent of his geographical knowledge. All men are comparatively ignorant in science, because science is confessedly a progressive study. The great scientific lights of our day may be insignificant, compared with those who are to arise, if profundity and accuracy of knowledge be made the test. It is the genius of the ancients, their grasp and power of mind, their original labors, which we are to consider.

Thus it would seem that among the ancients, in those departments of science which are inductive, there were not sufficient facts, well established, from which to make sound inductions; but in those departments which are deductive, like pure mathematics, and which require

great reasoning powers, there were lofty attainments — which indeed gave the foundation for the achievements of modern science.

AUTHORITIES.

AN exceedingly learned work (London, 1862) on the Astronomy of the Ancients, by Sir George Cornewall Lewis, though rather ostentatious in the parade of authorities, and minute on points which are not of much consequence, is worth consulting. Delambre's History of Ancient Astronomy has long been a classic, but is richer in materials for a history than a history itself. There is a valuable essay in the *Encyclopædia Britannica*, which refers to a list of special authors. Whewell's History of the Inductive Sciences may also be consulted with profit. Dunglison's History of Medicine is a standard, giving much detailed information, and Leclerc among the French and Speugel among the Germans are esteemed authorities. Strabo's Geography is the most valuable of antiquity; see also Polybius: both of these have been translated and edited for English readers.

MATERIAL LIFE OF THE ANCIENTS.

MECHANICAL AND USEFUL ARTS.

4000-50 B. C.

MATERIAL LIFE OF THE ANCIENTS.

MECHANICAL AND USEFUL ARTS.

WHILE the fine arts made great progress among the cultivated nations of antiquity, and with the Greeks reached a refinement that has never since been surpassed, the ancients were far behind modern nations in everything that has utility for its object. In implements of war, in agricultural instruments, in the variety of manufactures, in machinery, in chemical compounds, in domestic utensils, in grand engineering works, in the comfort of houses, in modes of land-travel and transportation, in navigation, in the multiplication of books, in triumphs over the forces of Nature, in those discoveries and inventions which abridge the labors of mankind and bring races into closer intercourse, — especially by such wonders as are wrought by steam, gas, electricity, gunpowder, the mariner's compass, and the art of printing, — the modern world feels its immense superiority to all the ages that have gone before. And yet, considering the

infancy of science and the youth of nations, more was accomplished by the ancients for the comfort and convenience and luxury of man than we naturally might suppose.

Egypt was the primeval seat of what may be called material civilization, and many arts and inventions were known there when the rest of the world was still in ignorance and barbarism. More than four thousand years ago the Egyptians had chariots of war and most of the military weapons known afterward to the Greeks, — especially the spear and bow, which were the most effective offensive weapons known to antiquity or the Middle Ages. Some of their warriors were clothed in coats of brass equal to the steel or iron cuirass worn by the Mediæval knights of chivalry. They had the battle-axe, the shield, the sword, the javelin, the metal-headed arrow. One of the early Egyptian kings marched against his enemies with six hundred thousand infantry, twenty thousand cavalry, and twenty-three thousand chariots of war, each drawn by two horses. The saddles and bridles of their horses were nearly as perfect as ours are at the present time; the leather they used was dyed in various colors, and adorned with metal edges. The wheels of their chariots were bound with hoops of metal, and had six spokes. Umbrellas to protect from the rays of the sun were held over the heads

of their women of rank when they rode in their highly-decorated chariots. Walls of solid masonry, thick and high, surrounded their principal cities, while an attacking or besieging army used movable towers. Their disciplined troops advanced to battle in true military precision, at the sound of the trumpet.

The public works of Egyptian kings were on a grand scale. They united rivers with seas by canals which employed hundreds of thousands of workmen. They transported heavy blocks of stone, of immense weight and magnitude, for their temples, palaces, and tombs. They erected obelisks in single shafts nearly one hundred feet in height, and they engraved the sides of these obelisks from top to bottom with representations of warriors, priests, and captives. They ornamented their vast temples with sculptures which required the hardest metals. Rameses the Great, the Sesostris of the Greeks, had a fleet of four hundred vessels in the Arabian Gulf, and the rowers wore quilted helmets. His vessels had sails, which implies the weaving of flax and the twisting of heavy ropes; some of his war-galleys were propelled by forty-four oars, and were one hundred and twenty feet in length.

Among their domestic utensils the Egyptians used the same kind of buckets for wells that we find to-day among the farmhouses of New England. Skilful gar-

deners were employed in ornamenting grounds and in raising fruits and vegetables. The leather cutters and dressers were famous for their skill, as well as workers in linen. Most products of the land, as well as domestic animals, were sold by weight in carefully adjusted scales. Instead of coins, money was in rings of gold, silver, and copper. The skill used by the Egyptians in rearing fowls, geese, and domestic animals greatly surpassed that known to modern farmers. According to Wilkinson, they caught fish in nets equal to the seines employed by modern fishermen. Their houses as well as their monuments were built of brick, and were sometimes four or five stories in height, and secured by bolts on the doors. Locks and keys were also in use, made of iron; and the doorways were ornamented. Some of the roofs of their public buildings were arched with stone. In their mills for grinding wheat circular stones were used, resembling in form those now employed, generally turned by women, but sometimes so large that asses and mules were employed in the work. The walls and ceilings of their buildings were richly painted, the devices being as elaborate as those of the Greeks. Besides town-houses, the rich had villas and gardens, where they amused themselves with angling and spearing fish in the ponds. The gardens were laid in walks shaded with trees, and were well watered from large

tanks. Vines were trained on trellis-work supported by pillars, and sometimes in the form of bowers. For gathering fruit, baskets were used somewhat similar to those now employed. Their wine-presses showed considerable ingenuity, and after the necessary fermentation the wine was poured into large earthen jars, corresponding to the amphoræ of the Romans, and covered with lids made air-tight by resin and bitumen. The Egyptians had several kinds of wine, highly praised by the ancients; and wine among them was cheap and abundant. Egypt was also renowned for drugs unknown to other nations, and for beer made of barley, as well as wine. As for fruits, they had the same variety as we have at the present day, their favorite fruit being dates. "So fond were the Egyptians of trees and flowers that they exacted a contribution from the nations tributary to them of their rarest plants, so that their gardens bloomed with flowers of every variety in all seasons of the year." Wreaths and chaplets were in common use from the earliest antiquity. It was in their gardens, abounding with vegetables as well as with fruits and flowers, that the Egyptians entertained their friends.

In Egyptian houses were handsome chairs and fauteuils, stools and couches, the legs of which were carved in imitation of the feet of animals; and these were made of rare woods, inlaid with ivory, and cov-

ered with rich stuffs. Some of the Egyptian chairs were furnished with cushions and covered with the skins of leopards and lions; the seats were made of leather, painted with flowers. Footstools were sometimes made of elegant patterns, inlaid with ivory and precious woods. Mats were used in the sitting-rooms. The couches were of every variety of form, and utilized in some instances as beds. The tables were round, square, and oblong, and were sometimes made of stone and highly ornamented with carvings. Bronze bedsteads were used by the wealthy classes.

In their entertainments nothing was omitted by the Egyptians which would produce festivity, — music, songs, dancing, and games of chance. The guests arrived in chariots or palanquins, borne by servants on foot, who also carried parasols over the heads of their masters. Previous to entering the festive chamber water was brought for the feet and hands, the ewers employed being made often of gold and silver, of beautiful form and workmanship. Servants in attendance anointed the head with sweet-scented ointment from alabaster vases, and put around the heads of the guests garlands and wreaths in which the lotus was conspicuous; they also perfumed the apartments with myrrh and frankincense, obtained chiefly from Syria. Then wine was brought, and emptied into drinking-cups of silver or bronze, and

even of porcelain, beautifully engraved, one of which was exclusively reserved for the master of the house. While at dinner the party were enlivened with musical instruments, the chief of which were the harp, the lyre, the guitar, the tambourine, the pipe, the flute, and the cymbal. Music was looked upon by the Egyptians as an important science, and was diligently studied and highly prized; the song and the dance were united with the sounds of musical instruments. Many of the ornamented vases and other vessels used by the Egyptians in their banquets were not inferior in elegance of form and artistic finish to those made by the Greeks at a later day. The Pharaoh of the Jewish Exodus had drinking-vessels of gold and silver, exquisitely engraved and ornamented with precious stones.

Some of the bronze vases found at Thebes and other parts of Egypt show great skill in the art of compounding metals, and were highly polished. Their bronze knives and daggers had an elastic spring, as if made of steel. Wilkinson expresses his surprise at the porcelain vessels recently discovered, as well as admiration of them, especially of their rich colors and beautiful shapes. There is a porcelain bowl of exquisite workmanship in the British Museum inscribed with the name of Rameses II., proving that the arts of pottery were carried to great perfection two thou-

and years before Christ. Boxes of elaborate workmanship, made of precious woods finely carved and inlaid with ivory, are also preserved in the different museums of Europe, all dating from a remote antiquity. These boxes are of every form, with admirably fitting lids, representing fishes, birds, and animals. The rings, bracelets, and other articles of jewelry that have been preserved show great facility on the part of the Egyptians in cutting the hardest stones. The skill displayed in the sculptures on the hard obelisks and granite monuments of Egypt was remarkable, since they were executed with hardened bronze.

Glass-blowing was another art in which the Egyptians excelled. Fifteen hundred years before Christ they made ornaments of glass, and glass vessels of large size were used for holding wine. Such was their skill in the manufacture of glass that they counterfeited precious stones with a success unknown to the moderns. We read of a counterfeited emerald six feet in length. Counterfeited necklaces were sold at Thebes which deceived strangers. The uses to which glass was applied were in the manufacture of bottles, beads, mosaic work, and drinking-cups, and their different colors show considerable knowledge of chemistry. The art of cutting and engraving stones was doubtless learned by the Israel-

ites in their sojourn in Egypt. So perfect were the Egyptians in the arts of cutting precious stones that they were sought by foreign merchants, and they furnished an important material in commerce.

From the earliest times the Egyptians were celebrated for their manufacture of linen, which was one of the principal articles of commerce; and cotton and woollen cloths as well as linen were woven. Cotton was used not only for articles of dress, but for the covering of chairs and other kinds of furniture. The great mass of the mummy cloths is of coarse texture; but the "fine linen" spoken of in the Scripture was as fine as muslin, in some instances containing more than five hundred threads to an inch, while the finest productions of the looms of India have only one hundred threads to the inch. Not only were the threads of linen cloth of extraordinary fineness, but the dyes were equally remarkable, and were unaffected by strong alkalies. Spinning was principally the occupation of women, who also practised the art of embroidery, in which gold thread was used, supposed to be beaten out by the hammer; but in the arts of dyeing and embroidery the Egyptians were surpassed by the Babylonians, who were renowned for their cloths of various colors.

The manufacture of paper was another art for which the Egyptians were famous, made from the papyrus, a

plant growing in the marsh-land of the Nile. The papyrus was also applied to the manufacture of sails, baskets, canoes, and parts of sandals. Some of the papyri, on which is hieroglyphic writing dating from two thousand years before our era, are in good preservation. Sheep-skin parchment also was used for writing.

The Egyptians were especially skilled in the preparation of leather for sandals, shields, and chairs. The curriers used the same semicircular knife which is now in use. The great consumption of leather created a demand far greater than could be satisfied by the produce of the country, and therefore skins from foreign countries were imported as part of the tribute laid on conquered nations or tribes.

More numerous than the tanners in Egypt were the potters, among whom the pottery-wheel was known from a remote antiquity, previous to the arrival of Joseph from Canaan, and long before the foundation of the Greek Athens. Earthenware was used for holding wine, oils, and other liquids; but the finest production of the potter were the vases, covered with a vitreous glaze and modelled in every variety of forms, some of which were as elegant as those made later by the Greeks, who excelled in this department of **art**.

Carpenters and cabinet-makers formed a large class

of Egyptian workmen for making coffins, boxes, tables, chairs, doors, sofas, and other articles of furniture, frequently inlaid with ivory and rare woods. Veneering was known to these workmen, probably arising from the scarcity of wood. The tools used by the carpenters, as appear from the representations on the monuments, were the axe, the adze, the hand-saw, the chisel, the drill, and the plane. These tools were made of bronze, with handles of acacia, tamarisk, and other hard woods. The hatchet, by which trees were felled, was used by boat-builders. The boxes and other articles of furniture were highly ornamented with inlaid work.

Boat-building in Egypt also employed many workmen. Boats were made of the papyrus plant, deal, cedar, and other woods, and were propelled both by sails and oars. One ship-of-war built for Ptolemy Philopater is said by ancient writers to have been 478 feet long, to have had forty banks of oars, and to have carried 400 sailors, 4,000 rowers, and 3,000 soldiers. This is doubtless an exaggeration, but indicates great progress in naval architecture. The construction of boats varied according to the purpose for which they were intended. They were built with ribs as at the present day, with small keels, square sails, with spacious cabins in the centre, and ornamented sterns; there was usually but one mast, and the prows terminated in the heads of animals. The

boats of burden were somewhat similar to our barges ; the sails were generally painted with rich colors. The origin of boat-building was probably the raft, and improvement followed improvement until the ship-of-war rivalled in size our largest vessels, while Egyptian merchant vessels penetrated to distant seas, and probably doubled the Cape of Good Hope.

In regard to agriculture the Egyptians were the most advanced of the nations of antiquity, since the fertility of their soil made the occupation one of primary importance. Irrigation was universally practised, the Nile furnishing water for innumerable canals. The soil was often turned up with the hoe rather than the plough. The grain was sown broadcast, and was trodden in by goats. Their plough was very simple, and was drawn by oxen ; the yoke being attached to the horns. Although the soil was rich, manures were frequently used. The chief crops were those of wheat, barley, beans, peas, lentils, vetches, lupines, clover, rice, indigo, cotton, lettuce, flax, hemp, cumin, coriander, poppy, melons, cucumbers, onions, and leeks. We do not read of carrots, cabbages, beets, or potatoes, which enter so largely into modern husbandry. Oil was obtained from the olive, the castor-berry, simsin, and coleseed. Among the principal trees which were cultivated were the vine, olive, locust, acacia, date, sycamore, pomegranate, and tamarisk. Grain, after

harvest, was trodden out by oxen, and the straw was used as provender. To protect the fields from inundation dykes were built.

All classes in Egypt delighted in the sports of the field, especially in the hunting of wild animals, in which the arrow was most frequently used. Sometimes the animals were caught in nets, in enclosed places near water-brooks. The Egyptians also had numerous fish-ponds, since they were as fond of angling as they were of hunting. Hunting in Egypt was an amusement, not an occupation as among nomadic people. Not only was hunting for pleasure a great amusement among Egyptians, but also among Babylonians and Persians, who coursed the plains with dogs. They used the noose or lasso also to catch antelopes and wild cattle, which were hunted with lions; the bow used in the chase was similar to that employed in war. All the subjects of the chase were sculptured on the monuments with great spirit and fidelity, especially the stag, the ibex, the porcupine, the wolf, the hare, the lion, the fox, and the giraffe. The camel is not found among the Egyptian sculptures, nor the bear. Of the birds found in their sculptures were vultures, eagles, kites, hawks, owls, ravens, larks, swallows, turtle-doves, quails, ostriches, storks, plovers, snipes, geese, and ducks, many of which were taken in nets. The Nile and Lake Bir-

ket el Keroun furnished fish in great abundance. The profits of the fisheries were enormous, and were farmed out by the government.

The Egyptians were very fond of ornaments in dress, especially the women. They paid great attention to their sandals; they wore their hair long and plaited, bound round with an ornamented fillet fastened by a lotus bud; they wore ear-rings and a profusion of rings on the fingers and bracelets for the arms, made of gold and set with precious stones. The scarabæus, or sacred beetle, was the adornment of rings and necklaces; even the men wore necklaces and rings and chains. Both men and women stained the eyelids and brows. Pins and needles were among the articles of the toilet, usually made of bronze; also metallic mirrors finely polished. The men carried canes or walking-sticks,—the wands of Moses and Aaron.

As the Egyptians paid great attention to health, physicians were held in great repute; and none were permitted to practise but in some particular branch, such as diseases of the eye, the ear, the head, the teeth, and the internal maladies. They were paid by government, and were skilled in the knowledge of drugs. The art of curing diseases originated, according to Pliny, in Egypt. Connected with the healing art was the practice of embalming dead bodies, which was carried to great perfection.

In elegance of life the Greeks and Romans, however, far surpassed any of the nations of antiquity, if not in luxury itself, which was confined to the palaces of kings. In social refinements the Greeks were not behind any modern nation, as one infers from reading Becker's *Charicles*. Among the Greeks was the network of trades and professions, as in Paris and London, and a complicated social life in which all the amenities known to the modern world were seen, especially in Athens and Corinth and the Ionian capitals. What could be more polite and courteous than the intercourse carried on in Greece among cultivated and famous people? When were symposia more attractive than when the *élite* of Athens, in the time of Pericles, feasted and communed together? When was art ever brought in support of luxury to greater perfection? We read of libraries and books and booksellers, of social games, of attractive gardens and villas, as well as of baths and spectacles, of markets and fora in Athens. The common life of a Pericles or a Cicero differed but little from that of modern men of rank and fortune.

In describing the various arts which marked the nations of antiquity, we cannot but feel that in a material point of view the ancient civilization in its important features was as splendid as our own. In the decoration of houses, in social entertainments, in cook-

ery, the Romans were our equals. The mosaics, the signet rings, cameos, bracelets, bronzes, vases, couches, banqueting-tables, lamps, colored glass, potteries, all attest great elegance and beauty. The tables of thuga root and Delian bronze were as expensive as modern sideboards; wood and ivory were carved in Rome as exquisitely as in Japan and China; mirrors were made of polished silver. Glass-cutters could imitate the colors of precious stones so well that the Portland vase, from the tomb of Alexander Severus, was long considered as a genuine sardonyx. The palace of Nero glittered with gold and jewels; perfumes and flowers were showered from ivory ceilings. The halls of Helio-gabalus were hung with cloth of gold, enriched with jewels; his beds were silver, and his tables of gold. A banquet dish of Drusillus weighed five hundred pounds of silver. Tunics were embroidered with the figures of various animals; sandals were garnished with precious stones. Paulina wore jewels, when she paid visits, valued at \$800,000. Drinking-cups were engraved with scenes from the poets; libraries were adorned with busts, and presses of rare woods; sofas were inlaid with tortoise-shell, and covered with gorgeous purple. The Roman grandes rode in gilded chariots, bathed in marble baths, dined from golden plate, drank from crystal cups, slept on beds of down, reclined on luxurious couches, wore embroidered robes,

and were adorned with precious stones. They ransacked the earth and the seas for rare dishes for their banquets, and ornamented their houses with carpets from Babylon, onyx cups from Bithynia, marbles from Numidia, bronzes from Corinth, statues from Athens, — whatever, in short, was precious or rare or curious in the most distant countries.

What a concentration of material wonders was to be seen in all the countries that bordered on the Mediterranean, — not merely in Italy and Greece, but in Sicily and Asia Minor, and even in Gaul and Spain! Every country was dotted with cities, villas, and farms. Every country was famous for oil, or fruit, or wine, or vegetables, or timber, or flocks, or pastures, or horses. More than two hundred and fifty cities or towns in Italy alone are historical, and some were famous.

The excavations of Pompeii attest great luxury and elegance of life. Cortona, Clusium, Veii, Ancona, Ostia, Præneste, Antium, Misenum, Baiæ, Puteoli, Neapolis, Brundisium, Sybaris, were all celebrated.

And still more remarkable were the old capitals of Greece, Asia Minor, and Africa. Syracuse was older than Rome, and had a fortress of a mile and a half in length. Carthage, under the emperors, nearly equalled its ancient magnificence. Athens was never more splendid than in the time of the Roman Antonines.

In spite of successive conquests, there still towered upon the Acropolis the most wonderful temple of antiquity, built of Pentelic marble, and adorned with the sculptures of Phidias. Corinth was richer and more luxurious than Athens, and possessed the most valuable pictures of Greece, as well as the finest statues; a single street for three miles was adorned with costly edifices. And even the islands which were colonized by Greeks were seats of sculpture and painting, as well as of schools of learning. Still grander were the cities of Asia Minor. Antioch had a street four miles in length, with double colonnades; and its baths, theatres, museums, and temples excited universal admiration. At Ephesus was the grand temple of Diana, four times as large as the Parthenon at Athens, covering as much ground as Cologne Cathedral, with one hundred and twenty-eight columns sixty feet high. The Ephesian theatre was capable of seating sixty thousand spectators. Tarsus, the birthplace of Paul, was no mean city; and Damascus, the old capital of Syria, was both beautiful and rich.

Laodicea was famous for tapestries, Hierapolis for its iron wares, Cybara for its dyes, Sardis for its wines, Smyrna for its beautiful monuments, Delos for its slave-trade, Cyrene for its horses, Paphos for its temple of Venus, in which were a hundred altars. Seleucia

on the Tigris, had a population of four hundred thousand. Cæsarea in Palestine, founded by Herod the Great, and the principal seat of government to the Roman prefects, had a harbor equal in size to the renowned Piræus, and was secured against the south-west winds by a mole of such massive construction that the blocks of stone, sunk under the water, were fifty feet in length, eighteen in width, and nine in thickness. The city itself was constructed of polished stone, with an agora, a theatre, a circus, a prætorium, and a temple to Cæsar. Tyre, which had resisted for seven months the armies of Alexander, remained to the fall of the empire a great emporium of trade; it monopolized the manufacture of imperial purple. Sidon was equally celebrated for its glass and embroidered robes. The Sidonians cast glass mirrors, and imitated precious stones. But the glory of both Tyre and Sidon was in ships, which visited all the coasts of the Mediterranean, and even penetrated to Britain and India.

But greater than Tyre or Antioch, or any eastern city, was Alexandria, the capital of Egypt. Egypt even in its decline was still a great monarchy; and when the sceptre of three hundred kings passed from Cleopatra the last of the Ptolemies, to Augustus Cæsar the conqueror at Actium, the military force of Egypt is said to have amounted to seven hundred

thousand men. The annual revenues of this State under the Ptolemies amounted to about seventeen million dollars in gold and silver, besides the produce of the earth. A single feast cost Philadelphus more than half a million of pounds sterling, and he had accumulated treasures to the amount of seven hundred and forty thousand talents, or about eight hundred and sixty million dollars. What European monarch ever possessed such a sum? The kings of Egypt, even when tributary to Rome, were richer in gold and silver than was Louis XIV. in the proudest hour of his life.

The ground-plan of Alexandria was traced by Alexander himself, but it was not completed until the reign of Ptolemy Philadelphus. Its circumference was about fifteen miles; the streets were regular, and crossed one another at right angles, being wide enough for free passage of both carriages and foot passengers. Its harbor could hold the largest fleet ever congregated; its walls and gates were constructed with all the skill and strength known to antiquity; its population numbered six hundred thousand, and all nations were represented in its crowded streets. The wealth of the city may be inferred from the fact that in one year sixty-two hundred and fifty talents, or more than six million dollars, were paid to the public treasury for port dues. The library was the largest

in the world, numbering over seven hundred thousand volumes; and this was connected with a museum, a menagerie, a botanical garden, and various halls for lectures, altogether forming the most famous university in the Roman empire. The inhabitants were chiefly Greek, and had all the cultivated tastes and mercantile thrift of that quick-witted people. In a commercial point of view Alexandria was the most important city in the world, and its ships whitened every sea. Unlike most commercial cities, it was intellectual, and its schools of poetry, mathematics, medicine, philosophy, and theology were more renowned than even those of Athens during the third and fourth centuries. Alexandria, could it have been transported in its former splendor to our modern world, would be a great capital in these times.

And all these cities were connected with one another and with Rome by magnificent roads, perfectly straight, and paved with large blocks of stone. They were originally constructed for military purposes, but were used by travellers, and on them posts were regularly established; they crossed valleys upon arches, and penetrated mountains; in Italy, especially, they were great works of art, and connected all the provinces. There was an uninterrupted communication from the wall of Antoninus through York, London, Sandwich, Boulogne, Rheims, Lyons, Milan, Rome,

Brundisium, Dyrrachium, Byzantium, Ancyra, Tarsus, Antioch, Tyre, Jerusalem, — a distance of thirty-seven hundred and forty miles; and these roads were divided by milestones, and houses for travellers erected upon them at points of every five or six miles.

Commerce under the Roman emperors was not what it now is, but still was very considerable, and thus united the various provinces together. The most remote countries were ransacked to furnish luxuries for Rome; every year a fleet of one hundred and twenty vessels sailed from the Red Sea for the islands of the Indian Ocean. But the Mediterranean, with the rivers which flowed into it, was the great highway of the ancient navigator. Navigation by the ancients was even more rapid than in modern times before the invention of steam, since oars were employed as well as sails. In summer one hundred and sixty-two Roman miles were sailed over in twenty-four hours; this was the average speed, or about seven knots. From the mouth of the Tiber vessels could usually reach Africa in two days, Massilia in three, and the Pillars of Hercules in seven; from Puteoli the passage to Alexandria had been effected, with moderate winds, in nine days. These facts, however, apply only to the summer, and to favorable winds. The Romans did not navigate in the inclement seasons; but in summer the great inland sea was white with sails. Great fleets brought

corn from Gaul, Spain, Sardinia, Africa, Sicily, and Egypt. This was the most important trade; but a considerable commerce was carried on also in ivory, tortoise-shell, cotton and silk fabrics, pearls and precious stones, gums, spices, wines, wool, and oil. Greek and Asiatic wines, especially the Chian and Lesbian, were in great demand at Rome. The transport of earthenware, made generally in the Grecian cities, of wild animals for the amphitheatre, of marble, of the spoils of eastern cities, of military engines and stores, and of horses, required very large fleets and thousands of mariners, which probably belonged chiefly to great maritime cities. These cities with their dependencies required even more vessels for communication with one another than for Rome herself,—the great central object of enterprise and cupidity.

In this survey of ancient cities I have not yet spoken of the great central city,—the City of the Seven Hills, to which all the world was tributary. Whatever was costly or rare or beautiful, in Greece or Asia or Egypt, was appropriated by her citizen kings, since citizens were provincial governors. All the great highways, from the Atlantic to the Tigris, converged to the capital,—all roads led to Rome; all the ships of Alexandria and Carthage and Tarentum, and other commercial capitals, were employed in furnishing her with luxuries or necessities. Never

was there so proud a city as this "Epitome of the Universe." London, Paris, Vienna, Constantinople, St. Petersburg, Berlin, are great centres of fashion and power; but they are rivals, and excel only in some great department of human enterprise and genius, as in letters, or fashions, or commerce, or manufactures,—centres of influence and power in the countries of which they are capitals, yet they do not monopolize the wealth and energies of the world. London may contain more people than did ancient Rome, and may possess more commercial wealth; but London represents only the British monarchy, not a universal empire. Rome, however, monopolized every thing, and controlled all nations and peoples; she could shut up the schools of Athens, or disperse the ships of Alexandria, or regulate the shops of Antioch. What Lyons and Bordeaux are to Paris, Corinth and Babylon were to Rome,—mere dependent cities. Paul, condemned at Jerusalem, stretched out his arms to Rome, and Rome protected him. The philosophers of Greece were the tutors of Roman nobility. The kings of the East resorted to the palaces of Mount Palatine for favors or safety; the governors of Syria and Egypt, reigning in the palaces of ancient kings, returned to Rome to squander the riches they had accumulated. Senators and nobles took their turn as sovereign rulers of all the known countries of the

world. The halls in which Darius and Alexander and Pericles and Cræsus and Solomon and Cleopatra had feasted, became the witness of the banquets of Roman proconsuls. Babylon, Thebes, and Athens were only what Delhi and Calcutta are to the English of our day,—cities to be ruled by the delegates of the imperial Senate. Rome was the only “home” of the proud governors who reigned on the banks of the Thames, of the Seine, of the Rhine, of the Nile, of the Tigris. After they had enriched themselves with the spoils of the ancient monarchies they returned to their estates in Italy, or to their palaces on the Aventine. What a concentration of works of art on the hills, and around the Forum, and in the Campus Martius, and other celebrated quarters! There were temples rivalling those of Athens and Ephesus; baths covering more ground than the Pyramids, surrounded with Corinthian columns, and filled with the choicest treasures ransacked from the cities of Greece and Asia; palaces in comparison with which the Tuileries and Versailles are small; theatres which seated a larger audience than any present public buildings in Europe; amphitheatres more extensive and costly than Cologue, Milan, and York Minster cathedrals combined, and seating eight times as many spectators as could be crowded into St. Peter’s Church; circuses where, it is said, three hundred and eighty-five thou-

sand persons could witness the games and chariot-races at a time; bridges, still standing, which have furnished models for the most beautiful at Paris and London; aqueducts carried over arches one hundred feet in height, through which flowed the surplus water of distant lakes; drains of solid masonry in which large boats could float; pillars more than one hundred feet in height, coated with precious marbles or plates of brass, and covered with bas-reliefs; obelisks brought from Egypt; fora and basilicas connected together, and extending more than three thousand feet in length, every part of which was filled with "animated busts" of conquerors, kings, statesmen, poets, publicists, and philosophers; mausoleums greater and more splendid than that Artemisia erected to the memory of her husband; triumphal arches under which marched in stately procession the victorious armies of the Eternal City, preceded by the spoils and trophies of conquered empires.

Such was the proud capital, — a city of palaces, a residence of nobles who were virtually kings, enriched with the accumulated treasures of ancient civilization. Great were the capitals of Greece and Asia, but how pre-eminent was Rome, since all were subordinate to her! How bewildering and bewitching to a traveller must have been the varied wonders of the city! Go where he would, his eye rested on something which was

both a study and a marvel. Let him drive or walk about the suburbs,—there were villas, tombs, aqueducts looking like our railroads on arches, sculptured monuments, and gardens of surpassing beauty and luxury. Let him approach the walls,—they were great fortifications extending twenty-one miles in circuit, according to the measurement of Ammon as adopted by Gibbon and forty-five miles according to other authorities. Let him enter any of the various gates that opened into the city from the roads which radiated to all parts of Italy and the world,—they were of monumental brass covered with bas-reliefs, on which the victories of generals for a thousand years were commemorated. Let him pass through any of the crowded thoroughfares,—he saw houses towering scarcely ever less than seventy feet, as tall as those of Edinburgh in its oldest sections. Most of the houses in which this vast population lived, according to Strabo, possessed pipes which gave a never-failing supply of water from the rivers that flowed into the city through the aqueducts and out again through the sewers into the Tiber. Let the traveller walk up the Via Sacra,—that short street, scarcely half a mile in length,—and he passed the Flavian Amphitheatre, the Temple of Venus and Rome, the Arch of Titus, the Temples of Peace, of Vesta, and of Castor, the Forum Romanum, the Basilica Julia, the

Arch of Severus, the Temple of Saturn, and stood before the majestic ascent to the Capitoline Jupiter, with its magnificent portico and ornamented pediment, surpassing the façade of any modern church. On his left, as he emerged from beneath the sculptured Arch of Titus, was the Palatine Mount, nearly covered by the palace of the Cæsars, the magnificent residences of the higher nobility, and various temples, of which that of Apollo was the most magnificent, built by Augustus, of solid white marble from Luna. Here were the palaces of Vaccus, of Flaccus, of Cicero, of Catiline, of Scaurus, of Antoninus, of Clodius, of Agrippa, and of Hortensius. Still on his left, in the valley between the Palatine and the Capitoline, though he could not see it, concealed from view by the great Temples of Vesta and of Castor, and the still greater edifice known as the Basilica Julia, was the quarter called the Velabrum, extending to the river, where the Pons Æmilius crossed it,—a low quarter of narrow streets and tall houses where the rabble lived and died. On his right, concealed from view by the Ædes Divi Julii and the Forum Romanum, was that magnificent series of edifices extending from the Temple of Peace to the Temple of Trajan, including the Basilica Pauli, the Forum Julii, the Forum Augusti, the Forum Trajani, the Basilica Ulpia,—a space more than three thousand feet in length, and

six hundred in breadth, almost entirely surrounded by porticos and colonnades, and filled with statues and pictures, — displaying on the whole probably the grandest series of public buildings clustered together ever erected, especially if we include the Forum Romanum and the various temples and basilicas which connected the whole, — a forest of marble pillars and statues. Ascending the steps which led from the Temple of Concord to the Temple of Juno Moneta upon the Arx, or Tarpeian Rock, on the southwestern summit of the hill, itself one of the most beautiful temples in Rome, erected by Camillus on the spot where the house of M. Manlius Capitolinus had stood, and one came upon the Roman mint. Near this was the temple erected by Augustus to Jupiter Tonans, and that built by Domitian to Jupiter Custos. But all the sacred edifices which crowned the Capitoline were subordinate to the Templum Jovis Capitolini, standing on a platform of eight thousand square feet, and built of the richest materials. The portico which faced the Via Sacra consisted of three rows of Doric columns, the pediment profusely ornamented with the choicest sculptures, the apex of the roof surmounted by the bronze horses of Lysippus, and the roof itself covered with gilded tiles. The temple had three separate cells, though covered with one roof; in front of each stood colossal statues of the three deities to

whom it was consecrated. Here were preserved what was most sacred in the eyes of Romans, and it was itself the richest of all the temples of the city.

What a beautiful panorama was presented to the view from the summit of this consecrated hill, only mounted by a steep ascent of one hundred steps! To the south was the *Via Sacra* extending to the Colosseum, and beyond it the *Appia Via*, lined with monuments as far as the eye could reach. A little beyond the fora to the east was the *Carinæ*, a fashionable quarter of beautiful shops and houses, and still farther off were the Baths of Titus, extending from the *Carinæ* to the *Esquiline Mount*. To the northeast were the *Viminal* and *Quirinal hills*, after the *Palatine* the most ancient part of the city, the seat of the Sabine population, abounding in fanes and temples, the most splendid of which was the Temple of *Quirinus*, erected originally to *Romulus* by *Numa*, but rebuilt by *Augustus*, with a double row of columns on each of its sides, seventy-six in number. Near by was the house of *Atticus*, and the gardens of *Sallust* in the valley between the *Quirinal* and *Pincian*, afterward the property of the Emperor. Far back on the *Quirinal*, near the wall of *Servius*, were the Baths of *Diocletian*, and still farther to the east the *Pretorian Camp* established by *Tiberius*, and included within the wall of *Aurelian*. To the

northeast the eye lighted on the Pincian Hill covered with the gardens of Lucullus, to possess which Messalina caused the death of Valerius Asiaticus, into whose possession they had fallen. In the valley which lay between the fora and the Quirinal was the celebrated Subura, the quarter of shops, markets, and artificers, — a busy, noisy, vulgar section, not beautiful, but full of life and enterprise and wickedness. The eye then turned to the north, and the whole length of the Via Flamina was exposed to view, extending from the Capitoline to the Flaminian gate, perfectly straight, the finest street in Rome, and parallel to the modern Corso; it was the great highway to the north of Italy. Monuments and temples and palaces lined this celebrated street; it was spanned by the triumphal arches of Claudius and Marcus Aurelius. To the west of it was the Campus Martius, with its innumerable objects of interest, — the Baths of Agrippa, the Pantheon, the Thermæ Alexandrinæ, the Column of Marcus Aurelius, and the Mausoleum of Augustus. Beneath the Capitoline on the west, toward the river, was the Circus Flaminius, the Portico of Octavius, the Theatre of Balbus, and the Theatre of Pompey, where forty thousand spectators were accommodated. Stretching beyond the Thermæ Alexandrinæ, near the Pantheon, was the magnificent bridge which crossed the Tiber, built by Hadrian when he founded his Mausoleum.

to which it led, still standing under the name of the Ponte S. Angelo. The eye took in eight or nine bridges over the Tiber, some of wood, but generally of stone, of beautiful masonry, and crowned with statues. In the valley between the Palatine and the Aventine, was the great Circus Maximus, founded by the early Tarquin; it was the largest open space, inclosed by walls and porticos, in the city; it seated three hundred and eighty-five thousand spectators. How vast a city, which could spare nearly four hundred thousand of its population to see the chariot-races! Beyond was the Aventine itself. This also was rich in legendary monuments and in the palaces of the great, though originally a plebeian quarter. Here dwelt Trajan before he was emperor, and Ennius the poet, and Paula the friend of Saint Jerome. Beneath the Aventine, and a little south of the Circus Maximus, were the great Baths of Caracalla, the ruins of which, next to those of the Colosseum, made on my mind the strongest impression of all I saw that pertains to antiquity, though these were not so large as those of Diocletian. The view south took in the Cælian Hill, the ancient residence of Tullus Hostilius. This hill was the residence of many distinguished Romans, among whose palaces was that of Claudius Centumalus, which towered ten or twelve stories into the air. But grander than any of these

palaces was that of Plautius Lateranus, on whose site now stands the basilica of St. John Lateran, — the gift of Constantine to the bishop of Rome, — one of the most ancient of the Christian churches, in which, for fifteen hundred years, daily services have been performed.

Such were the objects of interest and grandeur that met the eye as it was turned toward the various quarters of the city, which contained between three and four millions of people. Lipsius estimates four millions as the population, including slaves, women, children, and strangers. Though this estimate is regarded as too large by Merivale and others, yet how enormous must have been the number of the people when there were nine thousand and twenty-five baths, and when those of Diocletian could accommodate thirty-two hundred bathers at a time! The wooden theatre of Scaurus contained eighty thousand seats; that of Marcellus twenty thousand; the Colosseum would seat eighty-seven thousand persons, and give standing space for twenty-two thousand more. The Circus Maximus would hold three hundred and eighty-five thousand spectators. If only one person out of four of the free population witnessed the games and spectacles at a time, we thus must have four millions of people altogether in the city. The Aurelian walls are now only thirteen miles in circumference, but Lipsius

estimates the original circumference at forty-five miles, and Vopiscus at nearly fifty. The diameter of the city must have been eleven miles, since Strabo tells us that the actual limit of Rome was at a place between the fifth and sixth milestone from the column of Trajan in the Forum,—the central and most conspicuous object in the city except the capitol.

Modern writers, taking London and Paris for their measure of material civilization, seem unwilling to admit that Rome could have reached such a pitch of glory and wealth and power. To him who stands within the narrow limits of the Forum, as it now appears, it seems incredible that it could have been the centre of a much larger city than Europe can now boast of. Grave historians are loath to compromise their dignity and character for truth by admitting statements which seem, to men of limited views, to be fabulous, and which transcend modern experience. But we should remember that most of the monuments of ancient Rome have entirely disappeared. Nothing remains of the Palace of the Cæsars, which nearly covered the Palatine Hill; little of the fora which, connected together, covered a space twice as large as that inclosed by the palaces of the Louvre and Tuileries, with all their galleries and courts; almost nothing of the glories of the Capitoline Hill; and little comparatively of those Thermæ which were a mile

in circuit. But what does remain attests an unparalleled grandeur,—the broken pillars of the Forum; the lofty columns of Trajan and Marcus Aurelius; the Pantheon, lifting its spacious dome two hundred feet into the air; the mere vestibule of the Baths of Agrippa; the triumphal arches of Titus and Trajan and Constantine; the bridges which span the Tiber; the aqueducts which cross the Campagna; the Cloaca Maxima, which drained the marshes and lakes of the infant city; and, above all, the Colosseum. What glory and shame are associated with that single edifice! That alone, if nothing else remained of Pagan antiquity, would indicate a grandeur and a folly such as cannot now be seen on earth. It reveals a wonderful skill in masonry and great architectural strength; it shows the wealth and resources of rulers who must have had the treasures of the world at their command; it shows the restless passions of the people for excitement, and the necessity on the part of government of yielding to this taste. What leisure and indolence marked a city which could afford to give up so much time to the demoralizing sports! What facilities for transportation were afforded, when so many wild beasts could be brought to the capitol from the central parts of Africa without calling out unusual comment! How imperious a populace that compels the government to provide such expensive pleasures! The games of

Titus. on the dedication of the Colosseum, lasted one hundred days, and five thousand wild beasts were slaughtered in the arena. The number of the gladiators who fought surpasses belief. At the triumph of Trajan over the Dacians, ten thousand gladiators were exhibited, and the Emperor himself presided under a gilded canopy, surrounded by thousands of his lords. Underneath the arena, strewn with yellow sand and sawdust, was a solid pavement, so closely cemented that it could be turned into an artificial lake, on which naval battles were fought. But it was the conflict of gladiators which most deeply stimulated the passions of the people. The benches were crowded with eager spectators, and the voices of one hundred thousand were raised in triumph or rage as the miserable victims sank exhausted in the bloody sport.

Yet it was not the gladiatorial sports of the amphitheatre which most strikingly attested the greatness and splendor of the city; nor the palaces, in which as many as four hundred slaves were sometimes maintained as domestic servants for a single establishment, — twelve hundred in number according to the lowest estimate, but probably five times as numerous, since every senator, every knight, and every rich man was proud to possess a residence which would attract attention: nor the temples which

numbered four hundred and twenty-four, most of which were of marble, filled with statues, the contributions of ages, and surrounded with groves; nor the fora and basilicas, with their porticos, statues, and pictures, covering more space than any cluster of public buildings in Europe, a mile and a half in circuit; nor the baths, nearly as large, still more completely filled with works of art; nor the Circus Maximus, where more people witnessed the chariot races at a time than are nightly assembled in all the places of public amusement in Paris, London, and New York combined, — more than could be seated in all the cathedrals of England and France. It is not these which most impressively make us feel the amazing grandeur of the old capital of the world. The triumphal processions of the conquering generals were still more exciting to behold, for these appealed more directly to the imagination, and excited those passions which urged the Romans to a career of conquest from generation to generation. No military review of modern times equalled those gorgeous triumphs, even as no scenic performance compares with the gladiatorial shows; the sun has never shone upon any human assemblage so magnificent and so grand, so imposing and yet so guilty. Not only were displayed the spoils of conquered kingdoms, and the triumphal cars of generals, but the whole military strength of the capi-

tal; an army of one hundred thousand men, flushed with victory, followed the gorgeous procession of nobles and princes. The triumph of Aurelian, on his return from the East, gives us some idea of the grandeur of that ovation to conquerors. "The pomp was opened by twenty elephants, four royal tigers, and two hundred of the most curious animals from every climate, north, south, east, and west. These were followed by sixteen hundred gladiators, devoted to the cruel amusement of the amphitheatre. Then were displayed the arms and ensigns of conquered nations, the plate and wardrobe of the Syrian queen. Then ambassadors from all parts of the earth, all remarkable in their rich dresses, with their crowns and offerings. Then the captives taken in the various wars, — Goths, Vandals, Samaritans, Alemanni, Franks, Gauls, Syrians, and Egyptians, each marked by their national costume. Then the Queen of the East, the beautiful Zenobia, confined by fetters of gold, and fainting under the weight of jewels, preceding the beautiful chariot in which she had hoped to enter the gates of Rome. Then the chariot of the Persian king. Then the triumphal car of Aurelian himself, drawn by elephants. Finally the most illustrious of the Senate and the army closed the solemn procession, amid the acclamations of the people, and the sound of musical instruments. It took from dawn of day un-

til the ninth hour for the procession to pass to the capitol; and the festival was protracted by theatrical representations, the games of the circus, the hunting of wild beasts, combats of gladiators, and naval engagements."

Such were the material wonders of the ancient civilizations, culminating in their latest and greatest representative, and displayed in its proud capital,—nearly all of which became later the spoil of barbarians, who ruthlessly marched over the classic world, having no regard for its choicest treasures. Those old glories are now indeed succeeded by a prouder civilization,—the work of nobler races after sixteen hundred years of new experiments. But why such an eclipse of the glory of man? The reason is apparent if we survey the internal state of the ancient empires, especially of society as it existed under the Roman emperors.

AUTHORITIES.

HERODOTUS, Strabo, Pliny, Polybius, Diodorus Siculus, Titus Livius, Pausanias, on the geography and resources of the ancient nations. See an able chapter on Mediterranean prosperity in Louis Napoleon's History of Cæsar. Smith's Dictionary of Ancient Geography is exhaustive. Wilkinson has revealed the civilization of

ancient Egypt. Professor Becker's Handbook of Rome, as well as his Gallus and Charicles shed much light on manners and customs. Dyer's History of the City of Rome is the fullest description of its wonders that I have read. Niebuhr, Bunsen, and Platner, among the Germans, have written learnedly, but also have created much doubt about things supposed to be established. Mommsen, Curtius, and Merivale are also great authorities. Nor are the magnificent chapters of Gibbon to be disregarded by the student of Roman history, notwithstanding his elaborate and inflated style.

THE MILITARY ART.

WEAPONS, ENGINES, DISCIPLINE.

1300-100 A. D.

THE MILITARY ART.

WEAPONS, ENGINES, DISCIPLINE.

IN surveying the nations of antiquity nothing impresses us more forcibly than the perpetual wars in which they were engaged, and the fact that military art and science seem to have been among the earliest things that occupied the thoughts of men. Personal strife and tribal warfare are coeval with the earliest movements of humanity.

The first recorded act in the Hebraic history of the world after the expulsion of Adam from Paradise is a murder. In patriarchal times we read of contentions between the servants of Abraham and of Lot, and between the petty kings and chieftains of the countries where they journeyed. Long before Abraham was born, violence was the greatest evil with which the world was afflicted. Before his day mighty conquerors arose and founded kingdoms. Babylon and Egypt were powerful military States in pre-historic times. Wars more or less fierce were waged before nations

were civilized. The earliest known art, therefore, was the art of destruction, growing out of the wicked and brutal passions of men, — envy and hatred, ambition and revenge ; in a word, selfishness. Race fought with race, kingdom with kingdom, and city with city, in the very infancy of society. In secular history the greatest names are those of conquerors and heroes in every land under the sun ; and it was by conquerors that those grand monuments were erected the ruins of which astonish every traveller, especially in Egypt and Assyria.

But wars in the earliest ages were not carried on scientifically, or even as an art. There was little to mark them except brute force. Armies were scarcely more than great collections of armed men, led by kings, either to protect their States from hostile invaders, or to acquire new territory, or to exact tribute from weaker nations. We do not read of military discipline, or of skill in strategy and tactics. A battle was lost or won by individual prowess ; it was generally a hand-to-hand encounter, in which the strongest and bravest gained the victory.

One of the earliest descriptions of war is to be found in the *Iliad* of Homer, where individual heroes fought with one another, armed with the sword, the lance, and the javelin, protected by shields, helmets, and coats of mail. They fought on foot, or from chariots, which

were in use before cavalry. The war-horse was driven before he was ridden in Egypt or Palestine; but the Aryan barbarians in their invasion rode their horses, and fought on horseback, like the modern Cossacks.

Until the Greeks became familiar with war as an art, armies were usually very large, as if a great part of the population of a country followed the sovereign who commanded them. Rameses the Great, the Sesostris of the Greeks, according to Herodotus led nearly a million of men in his expeditions. He was the most noted of ancient warriors until Cyrus the Persian arose, and was nearly contemporaneous with Moses. The Trojan war is supposed to have taken place during the period when the Israelites were subject to the Ammonites; and about the time that the Philistines were defeated by David, the Greeks were forced by war to found colonies in Asia Minor.

After authentic history begins, war is the main subject with which it has to deal; and for three thousand years history is simply the record of the feats of warriors and generals, of their conquests and defeats, of the rise and fall of kingdoms and cities, of the growth or decline of military virtues. No arts of civilization have preserved nations from the sword of the conqueror, and war has been both the amusement and the business of kings. From the earliest ages, the most valued laurels have been bestowed for success in

war, and military fame has eclipsed all other glories. The cry of the mourner has been unheeded in the blaze of conquest; even the aspirations of the poet and the labors of the artist have been as nought, except to celebrate the achievements of heroes.

It is interesting then to inquire how far the ancients advanced in the arts of war, which include military weapons, movements, the structure of camps, the discipline of armies, the construction of ships and of military engines, and the concentration and management of forces under a single man. What was that mighty machinery by which nations were subdued, or rose to greatness on the ruin of States and Empires? The conquests of Rameses, of David, of Nebuchadnezzar, of Cyrus, of Alexander, of Hannibal, of Cæsar, and other heroes are still the subjects of contemplation among statesmen and schoolboys. The exploits of heroes are the pith of history.

The art of war must have made great progress in the infancy of civilization, when bodily energies were most highly valued, when men were fierce, hardy, strong, and uncorrupted by luxury: when mere physical forces gave law alike to the rich and the poor, to the learned and the ignorant; and when the avenue to power led across the field of battle.

We must go to Egypt for the earliest development of art and science in all departments; and so far as the

art of war consists in the organization of physical forces for conquest or defence, under the direction of a single man, it was in Egypt that this was first accomplished, about seventeen hundred years before Christ, as chronologists think, by Rameses the Great.

This monarch, according to Wilkinson, the greatest and most ambitious of the Egyptian kings, to whom the Greeks gave the name of Sesostris, showed great ability in collecting together large bodies of his subjects, and controlling them by a rigid military discipline. He accustomed them to heat and cold, hunger and thirst, fatigue, and exposure to danger. With bodies thus rendered vigorous by labor and discipline, they were fitted for distant expeditions. Rameses first subdued the Arabians and Libyans, and annexed them to the Egyptian monarchy. While he inured his subjects to fatigue and danger, he was careful to win their affections by acts of munificence and clemency. He then made his preparations for the conquest of the known world, and collected an army, according to Diodorus Siculus, of six hundred thousand infantry, twenty-four thousand cavalry, and twenty-seven thousand war-chariots. It is difficult to understand how a small country like Egypt could furnish such an immense force. If the account of the historian be not exaggerated, Rameses must have enrolled the conquered Libyans and Arabians and other nations among

his soldiers. He subjected his army to a stern discipline and an uncomplaining obedience to orders, — the first principle in the science of war, which no successful general in the world's history has ever disregarded, from Alexander to Napoleon. With this powerful army his march was irresistible. Ethiopia was first subdued, and an exaction made from the conquered of a tribute of gold, ivory, and ebony. In those ancient times a conquering army did not resettle or colonize the territories it had subdued, but was contented with overrunning the country and exacting tribute from the people. Such was the nature of the Babylonian and Persian conquests. After overrunning Ethiopia and some other countries near the Straits of Babelmandeb, the conqueror proceeded to India, which he overran beyond the Ganges, and ascended the high table-land of Central Asia; then proceeding westward, he entered Europe, nor halted in his devastating career until he reached Thrace. From thence he marched to Asia Minor, conquering as he went, and invaded Assyria, seating himself on the throne of Ninus and Semiramis. Then, laden with booty from the Eastern world, he returned to Egypt after an absence of thirty years and consolidated his empire, building those vast structures at Thebes, which for magnitude have never been surpassed. Thus was Egypt enriched with the spoil of nations, and made formidable for a thousand

years. Rameses was the last of the Pharaohs who pursued the phantom of military renown, or sought glory in distant expeditions.

We are in ignorance as to the details of the conquests and the generals who served under Rameses. There is doubtless some exaggeration in the statements of the Greek historian, but there is no doubt that this monarch was among the first of the great conquerors to establish a regular army, and to provide a fleet to co-operate with his land forces.

The strength of the Egyptian army consisted mainly in archers. They fought either on foot or in chariots; cavalry was not much relied upon, although mention is frequently made of horsemen as well as of chariots. The Egyptian infantry was divided into regiments, and Wilkinson tells us that they were named according to the arms they bore, — as “bowmen, spearmen, swordsmen, clubmen, slingers.” These regiments were divided into battalions and companies, commanded by their captains. The infantry, heavily armed with spears and shields, formed a phalanx almost impenetrable of twelve men deep, who marched with great regularity. Each company had its standard-bearer, who was an officer of approved valor; the royal standards were carried by the royal princes or by persons of the royal household. The troops were summoned by the sound of trumpet, and also by the drum, both used from the earliest pe-

riod. The offensive weapons were the bow, the spear, the javelin, the sword, the club, or mace, and the battle-axe. The chief defensive weapon was the shield, about three feet in length, covered with bull's hide, having the hair outward and studded with nails. The shape of the bow was not essentially different from that used in Europe in the Middle Ages, being about five feet and a half long, round, and tapering at the ends; the bowstring was of hide or catgut. The arrows of the archers averaged about thirty inches in length, and were made of wood or reeds, tipped with a metal point, or flint, and winged with feathers. Each bowman was furnished with a plentiful supply of arrows. When arrows were exhausted, the Bowman fought with swords and battle-axes; his defensive armor was confined chiefly to the helmet and a sort of quilted coat. The spear was of wood, with a metal head, was about five or six feet in length, and used for thrusting. The javelin was lighter, for throwing. The sling was a thong of plaited leather, broad in the middle, with a loop at the end. The sword was straight and short, between two and three feet in length, with a double edge, tapering to a sharp point, and used for either cut or thrust; the handle was frequently inlaid with precious stones. The metal used in the manufacture of swords and spear-heads was bronze, hardened by a process unknown to us. The battle-axe had a handle about

two-and-a-half feet in length, and was less ornamented than other weapons. The cuirass, or coat of armor, was made of horizontal rows of metal plate, about an inch in breadth, well secured together by bronze pieces. The Egyptian chariot held two persons,—the charioteer, and the warrior armed with his bow-and-arrow and wearing a cuirass, or coat of mail. The warrior carried also other weapons for close encounter, when he should descend from his chariot to fight on foot. The chariot was of wood, the body of which was light, strengthened with metal; the pole was inserted in the axle; the two wheels usually had six spokes, but sometimes only four; the wheel revolved on the axle, and was secured by a lynch-pin. The leathern harness and housings were simple, and the bridles, or reins, were nearly the same as are now in use.

“The Egyptian chariot corps, like the infantry,” says Wilkinson, “were divided into light and heavy troops, both armed with bows,—the former chiefly employed in harassing the enemy with missiles; the latter called upon to break through opposing masses of infantry.” The infantry, when employed in the assault of fortified towns, were provided with shields, under cover of which they made their approaches to the place to be attacked. In their attack they advanced under cover of the arrows of the bowmen, and instantly applied the scaling-ladder to the ramparts.

The testudo, a wooden shelter, was also used, large enough to contain several men. The battering-ram and movable towers resembled those of the Romans a thousand years later.

It would thus appear that the ancient Egyptians, in the discipline of armies, in military weapons offensive and defensive, in chariots and horses, and in military engines for the reduction of fortified towns, were scarcely improved upon by the Greeks and Romans, or by the Europeans in the Middle Ages. Yet the Egyptians were an ingenious rather than a warlike people, fond of peace, and devoted to agricultural pursuits.

More warlike than they were the Assyrians and the Persians, although we fail to discover any essential difference in the organization of armies, or in military weapons. The great difference between the Persian and the Egyptian armies was in the use of cavalry. From their earliest settlements the Persians were skilful horsemen, and these formed the guard of their kings. Under Cyrus, the Persians became the masters of the world, but they rapidly degenerated, not being able to withstand the luxurious life of the conquered Babylonians; and when they were marshalled against the Greeks, and especially against the disciplined forces of Alexander, they were disgracefully routed in spite of their enormous armies, which could not be handled, and became mere mobs of armed men.

The art of war made a great advance under the Greeks, although we do not notice any striking superiority of arms over the Eastern armies led by Sesostris or Cyrus. The Greeks were among the most warlike of all the races of men; they had a genius for war. The Grecian States were engaged in perpetual strifes with one another, and constant contention developed military strength; and yet the Greeks, until the time of Philip, had no standing armies. They relied for offence and defence on the volunteer militia, which was animated by intense patriotic ideas. All armies in the nature of things are more or less machines, moved by one commanding will; but the Greek armies owed much of their success to the individual bravery of their troops, who were citizens of States under constitutional forms of government.

The most remarkable improvement in the art of war was made by the Spartans, who, in addition to their strict military discipline, introduced the *phalanx*, — files of picked soldiers, eight deep, heavily armed with spear, sword, and shield, placed in ranks of eight, at intervals of about six feet apart. This phalanx of eight files and eight ranks, — sixty-four men, — closely locked when the soldiers received or advanced to attack, proved nearly impregnable and irresistible. It combined solidity and the power of resistance with mobility. The picked men were placed in the front

and rear; for in skilful evolutions the front often became the rear, and the rear became the front. Armed with spears projecting beyond the front, and with their shields locked together, the phalanx advanced to meet the enemy with regular step, and to the cadence of music; if beaten, it retired in perfect order. After battle, each soldier was obliged to produce his shield as a proof that he had fought or retired as a soldier should. The Athenian phalanx was less solid than that of Sparta, — Miltiades having decreased the depth to four ranks, in order to lengthen his front, — but was more efficient in a charge against the enemy. The Spartan phalanx was stronger in defence, the Athenian more agile in attack. The attack was nearly irresistible, as the soldiers advanced with accelerated motion, corresponding to the double-quick time of modern warfare. This was first introduced by Miltiades at Marathon.

Philip of Macedon adopted the Spartan phalanx, but made it sixteen deep, which gave it greater solidity, and rendered it still more effective. He introduced the large oval buckler and a larger and heavier spear. When the phalanx was closed for action, each man occupied but three square feet of ground; as the pikes were twenty-four feet in length, and projected eighteen feet beyond the front, the formation presented an array of points such as had never been seen before.

The greatest improvement effected by Philip, however, was the adoption of standing armies instead of the militia heretofore in use throughout the Grecian States. He also attached great importance to his cavalry, which was composed of the flower of the nobility, about twelve hundred in number, all covered with defensive armor; these he formed into eight squadrons, and constituted them his body-guard. The usual formation of the regular cavalry was in the form of a wedge, so as to penetrate and break the enemy's line,—a manœuvre probably learned from Epaminondas of Thebes, a great master in the art of war, who defeated the Spartan phalanx by forming his columns upon a front less than their depth, thus enabling him to direct his whole force against a given point. By these tactics he gained the great victory at Leuctra, as Napoleon likewise prevailed over the Austrians in his Italian campaign. In like manner Philip's son Alexander, following the example of Epaminondas, concentrated his forces upon the enemy's centre, and easily defeated the Persian hosts by creating a panic. There was no resisting a phalanx sixteen files deep, with their projecting pikes, aided by the heavily armed cavalry, all under the strictest military discipline and animated by patriotic ardor. This terrible Macedonian phalanx was a great advance over the early armies of the Greeks, who fought without discipline in a hand to hand encounter, with swords

and spears, after exhausting their arrows. They had learned two things of great importance, — a rigid discipline, and a concentration of forces which made an army a machine. Under Alexander, the grand phalanx consisted of 16,384 men, made up of four divisions and smaller phalanxes.

In Roman armies we see a still further advance in the military art, as it existed in the time of Augustus, which required centuries to perfect. The hardy physique and stern nature of the Romans, exercised and controlled by their organizing genius, evolved the Roman legion, which learned to resist the impetuous assaults of the elephants of the East, the phalanx of the Greeks, and the Teutonic barbarians. The indomitable courage of the Romans, trained under severest discipline and directed by means of an organization divided and subdivided and officered almost as perfectly as our modern corps and divisions and brigades and regiments and companies and squads, marched over and subdued the world.

The Roman soldier was trained to march twenty miles a day, under a burden of eighty pounds; to swim rivers, to climb mountains, to penetrate forests, and to encounter every kind of danger. He was taught that his destiny was to die in battle: death was at once his duty and his glory. He enlisted in the army with little hope of revisiting his home; he

crossed seas and deserts and forests with the idea of spending his life in the service of his country. His pay was only a denarius daily, equal to about sixteen cents of our money. Marriage for him was discouraged or forbidden. However insignificant the legionary was as a man, he gained importance from the great body with which he was identified: he was both the servant and the master of the State. He had an intense *esprit de corps*; he was bound up in the glory of his legion. Both religion and honor bound him to his standards; the golden eagle which glittered in his front was the object of his fondest devotion. Nor was it possible to escape the penalty of cowardice or treachery or disobedience; he could be chastised with blows by his centurion, and his general could doom him to death. Never was the severity of military discipline relaxed; military exercises were incessant, in winter as in summer. In the midst of peace the Roman troops were familiarized with the practice of war.

It was the spirit which animated the Roman legions, and the discipline to which they were inured that gave them their irresistible strength. When we remember that they had not our firearms, we can but be surprised at their efficiency, especially in taking strongly fortified cities. Jerusalem was defended by a triple wall, the most elaborate fortifications, and twenty-four thousand soldiers, besides the aid received from the

citizens; and yet it fell in little more than four months before an army of eighty thousand under Titus. How great must have been the military science that could reduce a place of such strength, in so short a time, without the aid of other artillery than the ancient catapult and battering-ram! Whether the military science of the Romans was superior or inferior to our own, no one can question that it was as perfect as it could be, lacking any knowledge of gunpowder; we surpass them only in the application of this great invention, especially in artillery. There can be no doubt that a Roman army was superior to a feudal army in the brightest days of chivalry. The world has produced no generals greater than Cæsar, Pompey, Sulla, and Marius. No armies ever won greater victories over superior numbers than the Roman, and no armies of their size ever retained in submission so vast an empire, and for so long a time. At no period in the history of the Roman empire were the armies so large as those sustained by France in time of peace. Two hundred thousand legionaries, and as many more auxiliaries, controlled diverse nations and powerful monarchies. The single province of Syria once boasted of a military force equal in the number of soldiers to that wielded by the Emperor Tiberius. Twenty-five Roman legions made the conquest of the world, and retained that conquest for five hundred years. The self-sustain-

energy of Cæsar in Gaul puts to the blush the efforts of all modern generals, unless we except Frederic II., Marlborough, Napoleon, Wellington, Grant, Sherman, and a few other great geniuses whom warlike crises have developed; nor is there a better text-book on the art of war than that furnished by Cæsar himself in his Commentaries. The great victories of the Romans over barbarians, over Gauls, over Carthaginians, over Greeks, over Syrians, over Persians. were not the result of a short-lived enthusiasm, like those of Attila and Tamerlane, but extended over a thousand years.

The Romans were essentially military in all their tastes and habits. Luxurious senators and nobles showed the greatest courage and skill in the most difficult campaigns. Antony, Cæsar, Pompey, and Lucullus at home were enervated and self-indulgent, but at the head of their legions they were capable of any privation and fatigue.

The Roman legion was a most perfect organization, a great mechanical force, and could sustain furious attacks after vigor, patriotism, and public spirit had fled. For three hundred years a vast empire was sustained by mechanism alone. The legion is coeval with the foundation of Rome, but the number of the troops of which it was composed varied at different periods. It rarely exceeded six thousand men; Gibbon estimates the number at six thousand eight hundred and twenty-six men

For many centuries it was composed exclusively of Roman citizens. Up to the year B. C. 107, no one was permitted to serve among the regular troops except those who were regarded as possessing a strong personal interest in the stability of the republic. Marius admitted all orders of citizens; and after the close of the Social War, B. C. 87, the whole free population of Italy was allowed to serve in the regular army. Claudius incorporated with the legion the vanquished Goths, and after him the barbarians filled up the ranks on account of the degeneracy of the times. But during the period when the Romans were conquering the world every citizen was trained to arms, like the Germans of the present day, and was liable to be called upon to serve in the armies. In the early age of the republic the legion was disbanded as soon as the special service was performed, and was in all essential respects a militia. For three centuries we have no record of a Roman army wintering in the field; but when Southern Italy became the seat of war, and especially when Rome was menaced by foreign enemies, and still more when a protracted foreign service became inevitable, the same soldiers remained in activity for several years. Gradually the distinction between the soldier and the civilian was entirely obliterated. The distant wars of the republic—such as the prolonged operations of Cæsar in Gaul, and

the civil contests — made a standing army a necessity. During the civil wars between Cæsar and Pompey the legions were forty in number; under Augustus, but twenty-five. Alexander Severus increased them to thirty-two. This was the standing force of the empire, — from one hundred and fifty thousand to two hundred and forty thousand men, stationed in the various provinces.

The main dependence of the legion was on the infantry, which wore heavy armor consisting of helmet, breastplate, greaves on the right leg, and on the left arm a buckler, four feet in length and two and a half in width. The helmet was originally made of leather or untanned skin, strengthened and adorned by bronze or gold, and surmounted by a crest which was often of horse-hair, and so made as to give an imposing look. The crests served not only for ornament, but to distinguish the different centurions. The breastplate, or cuirass, was generally made of metal, and sometimes was highly ornamented. Chain-mail was also used. The greaves were of bronze or brass, with a lining of leather or felt, and reached above the knees. The shield worn by the heavy-armed infantry was not round, like that of the early Greeks, but oval or oblong, adapted to the shape of the body, such as was adopted by Philip and Alexander, and was made of wood or wicker-work. The weapons were a light spear

a pilum, or javelin, over six feet long, terminated by a steel point, and a short cut-and-thrust sword with a double edge. Besides the armor and weapons of the legionary, he usually carried on the marches provisions for two weeks, three or four stakes used in forming the palisade of the camp, besides various tools, — altogether a burden of sixty or eighty pounds per man. The legion was drawn up eight deep, and three feet intervened between rank and file, which disposition gave great activity, and made it superior to the Macedonian phalanx, the strength of which depended on sixteen ranks of long pikes wedged together. The general period of service for the infantry was twenty years, after which the soldier received a discharge, together with a bounty in money or land.

The cavalry attached to each legion consisted of three hundred men, who originally were selected from the leading men in the State. They were mounted at the expense of the State, and formed a distinct order. The cavalry was divided into ten squadrons. To each legion was attached also a train of ten military engines of the largest size, and fifty-five of the smaller, — all of which discharged stones and darts with great effect. This train corresponded with our artillery.

The Roman legion — whether it was composed of four thousand men, as in the early ages of the republic, or six thousand, as in the time of Augustus — was divided

into ten cohorts, and each cohort was composed of Hastati (raw troops), Principes (trained troops), Triarii (veterans), and Velites (light troops, or skirmishers). The soldiers of the first line, called Hastati, consisted of youths in the bloom of manhood, who were distributed into fifteen companies, or maniples. Each company contained sixty privates, two centurions, and a standard-bearer. Two thirds were heavily armed, and bore the long shield; the remainder carried only a spear and light javelins. The second line, the Principes, was composed of men in the full vigor of life, divided also into fifteen companies, all heavily armed, and distinguished by the splendor of their equipments. The third body, the Triarii, was composed of tried veterans, in fifteen companies, the least trustworthy of which were placed in the rear; these formed three lines. The Velites were light-armed troops, employed on out-post duty, and mingled with the horsemen. The Hastati were so called because they were armed with the *hasta*, or spear; the Principes for being placed so near to the front; the Triarii, from having been arrayed behind the first two lines as a body of reserve. The Triarii were armed with the pilum, thicker and stronger than the Grecian lance, four and a half feet long, of wood, with a barbed head of iron,—so that the whole length of the weapon was six feet nine inches. It was used either to throw or thrust

with, and when it pierced the enemy's shield the iron head was bent, and the spear, owing to the twist in the iron, still held to the shield. Each soldier carried two of these weapons, and threw the heavy pilum over the heads of their comrades in front, in order to break the enemy's line. In the time of the empire, when the legion was modified, the infantry wore cuirasses and helmets, and carried a sword and dagger. The select infantry were armed with a long spear and a shield; the rest, with a pilum. Each man carried a saw, a basket, a mattock, a hatchet, a leather strap, a hook, a chain, and provisions for three days. The Equites (cavalry) wore helmets and cuirasses, like the infantry, having a broadsword at the right side, and in the hand a long pole. A buckler swung at the horse's flank. They were also furnished with a quiver containing three or four javelins.

The artillery were used both for hurling missiles in battle, and for the attack on fortresses. The *tormen-ram*, which was an elastic instrument, discharged stones and darts, and was held in general use until the discovery of gunpowder. In besieging a city, the ram was employed for destroying the lower part of a wall, and the *balista*, which discharged stones, was used to overthrow the battlements. The balista would project a stone weighing from fifty to three hundred pounds. The *aries*, or battering-ram, consisted of a large beam

made of the trunk of a tree, frequently one hundred feet in length, to one end of which was fastened a mace of iron or bronze resembling in form the head of a ram; it was often suspended by ropes from a beam fixed transversely over it, so that the soldiers were relieved from supporting its weight, and were able to give it a rapid and forcible swinging motion backward and forward. When this machine was further perfected by rigging it upon wheels, and constructing over it a roof, so as to form a *testudo*, which protected the besieging party from the assaults of the besieged, there was no tower so strong, no wall so thick, as to resist a long-continued attack, the great length of the beam enabling the soldiers to work across the defensive ditch, and as many as one hundred men being often employed upon it. The Romans learned from the Greeks the art of building this formidable engine, which was used with great effect by Alexander, but with still greater by Titus in the siege of Jerusalem; it was first used by the Romans in the siege of Syracuse. The *vinca* was a sort of roof under which the soldiers protected themselves when they undermined walls. The *helepolis*, also used in the attack on cities, was a square tower furnished with all the means of assault. This also was a Greek invention; and the one used by Demetrius at the siege of Rhodes, B. C. 306, was one hundred and thirty-

five feet high and sixty-eight wide, divided into nine stories. The *turris*, a tower of the same class, was used both by Greeks and Romans, and even by Asiatics. Mithridates used one at the siege of Cyzicus one hundred and fifty feet in height. These most formidable engines were generally made of beams of wood covered on three sides with iron and sometimes with raw-hides. They were higher than the walls and all the other fortifications of a besieged place, and divided into stories pierced with windows; in and upon them were stationed archers and slingers, and in the lower story was a battering-ram. The soldiers in the *turris* were also provided with scaling-ladders, sometimes on wheels; so that when the top of the wall was cleared by means of the *turris*, it might be scaled by means of the ladders. It was impossible to resist these powerful engines except by burning them, or by undermining the ground upon which they stood, or by overturning them with stones or iron-shod beams hung from a mast on the wall, or by increasing the height of the wall, or by erecting temporary towers on the wall beside them.

Thus there was no ancient fortification capable of withstanding a long siege when the besieged city was short of defenders or provisions. With forces equal between the combatants an attack was generally a failure, for the defenders had always a great advan-

tage; but when the number of defenders was reduced, or when famine pressed, the skill and courage of the assailants would ultimately triumph. Some ancient cities made a most obstinate resistance, like Tarentum; like Carthage, which stood a siege of four years; like Numantia in Spain, and like Jerusalem. When cities were of immense size, population, and resources, like Rome when besieged by Alaric, it was easier to take them by cutting off all ingress and egress, so as to produce famine. Tyre was taken by Alexander only by cutting off the harbor. Cyrus could not have taken Babylon by assault, since the walls were of such enormous height, and the ditch was too wide for the use of battering-rams; he resorted to an expedient of which the blinded inhabitants of that doomed city never dreamed, which rendered their impregnable fortifications useless. Nor probably would the Romans have prevailed against Jerusalem had not famine decimated and weakened its defenders. Fortified cities, though scarcely ever impregnable, were yet more in use in ancient than modern times, and greatly delayed the operations of advancing armies; and it was probably the fortified camp of the Romans, which protected an army against surprises and other misfortunes, that gave such permanent efficacy to the legions.

The chief officers of the legion were the Tribunes:

and originally there was one in each legion from the three tribes,—the Ramnes, Luceres, and Tities. In the time of Polybius the number in each legion was six. Their authority extended equally over the whole legion; but to prevent confusion, it was the custom for them to divide into three sections of two, and each pair undertook the routine duties for two months out of six; they nominated the centurions, and assigned each to the company to which he belonged. These tribunes at first were chosen the commanders-in-chief, by the kings and consuls; but during the palmy days of the republic, when the patrician power was pre-eminent, they were elected by the people, that is, the citizens. Later they were named, half by the Senate and half by the consuls. No one was eligible to this great office who had not served ten years in the infantry or five in the cavalry. The tribunes were distinguished by their dress from the common soldier. Next in rank to the tribunes, who corresponded to the rank of brigadiers and colonels in our times, were the Centurions, of whom there were sixty in each legion,—men who were more remarkable for calmness and sagacity than for courage and daring valor; men who would keep their posts at all hazards. It was their duty to drill the soldiers, to inspect arms, clothing, and food, to visit the sentinels and regulate the conduct of the men. They had the power of inflicting

corporal punishment. They were chosen for merit solely, until the later ages of the empire, when their posts were bought, as is the case to some extent to-day in the English army. The centurions were of unequal rank, — those of the *Triarii* before those of the *Principes*, and those of the *Principes* before those of the *Hastati*. The first centurion of the first maniple of the *Triarii* stood next in rank to the tribunes, and had a seat in the military councils. His office was very lucrative. To his charge was intrusted the eagle of the legion. As the centurion might rise from the ranks by regular gradation through the different maniples of the *Hastati*, *Principes*, and *Triarii*, there was great inducement held out to the soldiers. It would, however, appear that the centurion received only twice the pay of the ordinary legionary. There was not therefore so much difference in rank between a private and a captain as there is in our day. There were no aristocratic distinctions in the ancient world so marked as those existing in the modern. In the Roman legion there was nevertheless a regular gradation of rank, although there were but few distinct offices. The gradation was determined not by length of service, but for merit alone, of which the tribunes were the sole judges; hence the tribune in a Roman legion had more power than that of a modern colonel. As the tribunes named the centurions, so the cen-

turions appointed their lieutenants, who were called sub-centurions. Still below these were two sub-officers, or sergeants, and the *decanus*, or corporal, to every ten men.

There was a change in the constitution and disposition of the legion after the time of Marius, until the fall of the republic. The legions were thrown open to men of all grades; they were all armed and equipped alike; the lines were reduced to two, with a space between every two cohorts, of which there were five in each line; the young soldiers were placed in the rear; the distinction between Hastati, Principes, and Triarii ceased; the Velites disappeared, their work being done by the foreign mercenaries; the cavalry ceased to be part of the legion, and became a distinct body; and the military was completely severed from the rest of the State. Formerly no one could aspire to office who had not completed ten years of military service, but in the time of Cicero a man could pass through all the great dignities of the State with a very limited experience of military life. Cicero himself did military service in but one campaign.

Under the emperors there were still other changes. The regular army consisted of legions and *supplementa*, — the latter being subdivided into the imperial guards and the auxiliary troops.

The Auxiliaries (*Socii*) consisted of troops from the

States in alliance with Rome, or those compelled to furnish subsidies. The infantry of the allies was generally more numerous than that of the Romans, while the cavalry was three times as numerous. All the auxiliaries were paid by the State; their infantry received the same pay as the Roman infantry, but their cavalry received only two thirds of what was paid to the Roman cavalry. The common foot-soldier received in the time of Polybius three and a half asses a day, equal to about three cents; the horseman three times as much. The prætorian cohorts received twice as much as the legionaries. Julius Cæsar allowed about six asses a day as the pay of the legionary, and under Augustus the daily pay was raised to ten asses,—little more than eight cents per day. Domitian raised the stipend still higher. The soldier, however, was fed and clothed by the government.

The Prætorian Cohort was a select body of troops instituted by Augustus to protect his person, and consisted of ten cohorts, each of one thousand men, chosen from Italy. This number was increased by Vitellius to sixteen thousand, and they were assembled by Tiberius in a permanent camp, which was strongly fortified. They had peculiar privileges, and when they had served sixteen years received twenty thousand sesterces, or more than one hundred pounds sterling. Each prætorian had the rank of a centurion in the

regular army. Like the body-guard of Louis XIV. they were all gentlemen, and formed gradually a great power, like the Janissaries at Constantinople, and frequently disposed of the purple itself.

Our notice of the Roman legion would be incomplete without some description of the camp in which the soldier virtually lived. A Roman army never halted for a single night without forming a regular intrenchment capable of holding all the fighting men, the beasts of burden, and the baggage. During the winter months, when the army could not retire into some city, it was compelled to live in the camp, which was arranged and fortified according to a uniform plan, so that every company and individual had a place assigned. We cannot tell when this practice of intrenchment began; it was matured gradually, like all other things pertaining to all arts. The system was probably brought to perfection during the wars with Hannibal. Skill in the choice of ground, giving facilities for attack and defence, and for procuring water and other necessities, was of great account with the generals. An area of about five thousand square feet was allowed for a company of infantry, and ten thousand feet for a troop of thirty dragoons. The form of a camp was an exact square, the length of each side being two thousand and seventeen feet; there was a space of two hundred feet be-

tween the ramparts and the tents to facilitate the marching in and out of soldiers, and to guard the cattle and booty; the principal street was one hundred feet wide, and was called Principia. The defences of the camp consisted of a ditch, the earth from which was thrown inward, and of strong palisades of wooden stakes driven into the top of the earthwork so formed; the ditch was sometimes fifteen feet deep, and the *vallum*, or rampart, ten feet in height. When the army encamped for the first time the tribunes administered an oath to each individual, including slaves, to the effect that they would steal nothing out of the camp. Every morning at daybreak the centurions and the equites presented themselves before the tents of the tribunes, and the tribunes in like manner presented themselves before the prætorian, to learn the orders of the consuls, which through the centurions were communicated to the soldiers. Four companies took charge of the principal street, to see that it was properly cleaned and watered; one company took charge of the tent of the tribune; a strong guard attended to the horses, and another of fifty men stood beside the tent of the general, that he might be protected from open danger and secret treachery. The *velites* mounted guard the whole night and day along the whole extent of the vallum, and each gate was guarded by ten men; the *equites* were intrusted with the duty of acting as

sentinels during the night, and most ingenious measures were adopted to secure their watchfulness and fidelity. The watchword for the night was given by the commander-in-chief. "On the first signal being given by the trumpet, the tents were all struck and the baggage packed; at the second signal, the baggage was placed upon the beasts of burden; and at the third, the whole army began to move. Then the herald, standing at the right hand of the general, demands thrice if they are ready for war, to which they all respond with loud and repeated cheers that they are ready, and for the most part, being filled with martial ardor, anticipate the question, 'and raise their right hands on high with a shout.'" ¹

From what has come down to us of Roman military life, it appears to have been full of excitement, toil, danger, and hardship. The pecuniary rewards of the soldier were small; he was paid in glory. No profession brought so much honor as the military; and it was from the undivided attention of a great people to this profession, that it was carried to all the perfection which could be attained before the great invention of gunpowder changed the art of war. It was not the number of men employed in the Roman armies which particularly arrests attention, but the genius of organization which controlled and the spirit which animated

¹ Smith's Dictionary of Antiquities, article "Castræ."

them. The Romans loved war, but so reduced it to a science that it required comparatively small armies to conquer the world. Sulla defeated Mithridates with only thirty thousand men, while his adversary marshalled against him over one hundred thousand. Cæsar had only ten legions to effect the conquest of Gaul, and none of these were of Italian origin. At the great decisive battle of Pharsalia, when most of the available forces of the empire were employed on one side or the other, Pompey commanded a legionary army of forty-five thousand men, and his cavalry amounted to seven thousand more, but among them were included the flower of the Roman nobility; the auxiliary force has not been computed, although it was probably numerous. In the same battle Cæsar had under him only twenty-two thousand legionaries and one thousand cavalry. But every man in both armies was prepared to conquer or die. The forces were posted on the open plain, and the battle was really a hand-to-hand encounter, in which the soldiers, after hurling their lances, fought with their swords chiefly; and when the cavalry of Pompey rushed upon the legionaries of Cæsar, no blows were wasted on the mailed panoply of the mounted Romans, but were aimed at the face alone, as that only was unprotected. The battle was decided by the coolness, bravery, and discipline of Cæsar's vet-

erans, inspired by the genius of the greatest general of antiquity. Less than one hundred thousand men, in all probability, were engaged in one of the most memorable conflicts which the world has seen.

Thus it was by blended art and heroism that the Roman legions prevailed over the armies of the ancient world. But this military power was not gained in a day; it took nearly two hundred years, after the expulsion of the kings, to regain supremacy over the neighboring people, and another century to conquer Italy. The Romans did not contend with regular armies until they were brought in conflict with the king of Epirus and the phalanx of the Greeks, "which improved their military tactics, and introduced between the combatants those mutual regards of civilized nations which teach men to honor their adversaries, to spare the vanquished, and to lay aside wrath when the struggle is ended."

After the consolidation of Roman power in Italy, it took but one hundred and fifty years more to complete the conquest of the world, — of Northern Africa, Spain, Gaul, Illyria, Epirus, Greece, Macedonia, Asia Minor, Pontus, Syria, Egypt, Bithynia, Cappadocia, Pergamus, and the islands of the Mediterranean. The conquest of Carthage left Rome without a rival in the Mediterranean, and promoted intercourse with the Greeks. The Illyrian wars opened to the Romans the road to

Greece and Asia, and destroyed the pirates of the Adriatic. The invasion of Cisalpine Gaul, now that part of Italy which is north of the Apennines, protected Italy from the invasion of barbarians. The Macedonian War against Philip put Greece under the protection of Rome, and that against Antiochus laid Syria at her mercy; when these kingdoms were reduced to provinces, the way was opened to further conquests in the East, and the Mediterranean became a Roman lake.

But these conquests introduced luxury, wealth, pride, and avarice, which degrade while they elevate. Successful war created great generals, and founded great families; increased slavery, and promoted inequalities. Meanwhile the great generals struggled for supremacy; civil wars followed in the train of foreign conquests; Marius, Sulla, Pompey, Cæsar, Antony, Augustus, sacrificed the State to their own ambitions. Good men lamented and protested, and hid themselves; Cato, Cicero, Brutus, spoke in vain. Degenerate morals kept pace with civil contests. Rome revelled in the spoils of all kingdoms and countries, was intoxicated with power, became cruel and tyrannical, and after sacrificing the lives of citizens to fortunate generals, yielded at last her liberties, and imperial despotism began its reign. War had added empire, but undermined prosperity; it had created a great military mon-

archy, but destroyed liberty; it had brought wealth, but introduced inequalities; it had filled the city with spoils, but sown the vices of self-interest. The machinery remained perfect, but life had fled. It henceforth became the labor of Emperors to keep together their vast possessions with this machinery, which at last wore out, since there was neither genius to repair it nor patriotism to work it. It lasted three hundred years, but was broken to pieces by the barbarians.

AUTHORITIES.

WILKINSON is the best authority pertaining to Egyptian armies. The highest authority in relation to the construction of an army is Polybius, contemporary with Scipio, when Roman discipline was most perfect. The eighth chapter of Livy is also very much prized. Salmasius and Lepsius wrote learned treatises. Tacitus, Sallust, Livy, Dion Cassius, Pliny, and Cæsar reveal incidentally much that we wish to know, the last giving us the liveliest idea of the military habits and tactics of the Romans. Gibbon gives some important facts. The subject of ancient machines is treated by Folard's Commentary attached to his translation of Polybius. Josephus describes with great vividness the siege of Jerusalem. Smith's Dictionary of Antiquities is full of details in everything pertaining to the weapons, the armor, the military engines, the rewards and punishments of the soldiers. The articles "*Exercitus*," in Smith's Dictionary, and "*Army*," in the *Encyclopædia Britannica*, give a practical summary of the best writers

CICERO.

106-43 B. C.

ROMAN LITERATURE.

CICERO.

ROMAN LITERATURE.

MARCUS TULLIUS CICERO is one of the great lights of history, because his genius and influence were directed to the conservation of what was most precious in civilization among the cultivated nations of antiquity.

He was not a warrior, like so many of the Roman Senators, but his excellence was higher than that of a conqueror. "He was doomed, by his literary genius, to an immortality," and was confessedly the most prominent figure in the political history of his time, next to Cæsar and Pompey. His influence was greater than his power, reaching down to our time; and if his character had faults, let us remember that he was stained by no crimes and vices, in an age of violence and wickedness. Until lately he has received almost unmixed praise. The Fathers of the Church revered him. To Erasmus, as well as to Jerome and Augustine, he was an oracle.

In presenting this immortal benefactor, I have no novelties to show. Novelties are for those who seek to upturn the verdicts of past ages by offering something new, rather than what is true.

Cicero was born B. C. 106, in the little suburban town of Arpinum, about fifty miles from Rome,—the town which produced Marius. The period of his birth was one of marked national prosperity. Great military roads were built, which were a marvel of engineering skill; canals were dug; sails whitened the sea; commerce was prosperous; the arts of Greece were introduced, and its literature also; elegant villas lined the shores of the Mediterranean; pictures and statues were indefinitely multiplied,—everything indicated an increase of wealth and culture. With these triumphs of art and science and literature, we are compelled to notice likewise a decline in morals. Money had become the god which everybody worshipped. Religious life faded away; there was a general eclipse of faith. An Epicurean life produced an Epicurean philosophy. Pleasure-seeking was universal, and even revolting in the sports of the Amphitheatre. Sensualism became the convertible word for utilities. The Romans were thus rapidly “advancing” to a materialistic millennium,—an outward progress of wealth and industries, but an inward decline in “those virtues on which the strength

of man is based," accompanied with seditions among the people, luxury and pride among the nobles, and usurpations on the part of successful generals, — when Cicero began his memorable career.

He was well-born, but not of noble ancestors. The great peculiarity of his youth was his precocity. He was an intellectual prodigy, — like Pitt, Macaulay, and Mill. Like them, he had a wonderful memory. He early mastered the Greek language; he wrote poetry, studied under eminent professors, frequented the Forum, listened to the speeches of different orators, watched the posture and gestures of actors, and plunged into the mazes of literature and philosophy. He was conscious of his marvellous gifts, and was, of course, ambitious of distinction.

There were only three ways at Rome in which a man could rise to eminence and power. One was by making money, like army contractors and merchants, such as the Equites, to whose ranks he belonged; the second was by military service; and the third by the law, — an honorable profession. Like Cæsar, a few years younger than he, Cicero selected the law. But he was a *new man*, — not a patrician, as Cæsar was, — and had few powerful friends. Hence his progress was not rapid in the way of clients. He was twenty-five years of age before he had a case. He was twenty-seven when he defended Roscius, which seems to have brought

him into notice,—even as the fortune of Erskine was made in the Greenwich Hospital case and that of Daniel Webster in the case of Dartmouth College. To have defended Roscius against all the influence of Sulla, then the most powerful man in Rome, was considered bold and audacious. His fame for great logical power rests on his defence of Milo,—the admiration of all lawyers.

Cicero was not naturally robust. His figure was tall and spare, his neck long and slender, and his mouth anything but sensual. He looked more like an elegant scholar than a popular public speaker. Yet he was impetuous, ardent, and fiery, like Demosthenes, resorting to violent gesticulations. The health of such a young man could not stand the strain on his nervous system, and he was obliged to leave Rome for recreation; he therefore made the tour of Greece and Asia Minor, which every fashionable and cultivated man was supposed to do. Yet he did not abandon himself to the pleasures of cities more fascinating than Rome itself, but pursued his studies in rhetoric and philosophy under eminent masters, or “professors” as we should now call them. He remained abroad two years, returning when he was thirty years of age and settling down in his profession, taking at first but little part in politics. He married Terentia, with whom he lived happily for thirty years.

But the Roman lawyer was essentially a politician, ~~making~~ ultimately to political office, since only through the great public offices could he enter the Senate,—the object of ambition to all distinguished Romans, as a seat in Parliament is the goal of an Englishman. The Roman lawyer did not receive fees, like modern lawyers, but derived his support from presents and legacies. When he became a political leader, a man of influence with the great, his presents were enormous. Cicero acknowledged, late in life, to have received what would now be equal to more than a million of dollars from legacies alone. The great political leaders and orators were the stipendiaries of Eastern princes and nobles who wanted favors from the Senate, and who knew as well how to reward such services as do the railway kings in our times.

Before Cicero, then, could be a Senator, he must pass through those great public offices which were in the gift of the people. The first step on the ladder of advancement was the office of quæstor, which entailed the duty of collecting revenues in one of the provinces. This office he was sufficiently influential to secure, being sent to Sicily, where he distinguished himself for his activity and integrity. At the end of a year he renewed his practice in the courts at Rome,—being hardly anything more than a mere lawyer for five years, when he was elected an Ædile,

to whom the care of the public buildings was intrusted.

It was while he was ædile-elect that Cicero appeared as the public prosecutor of Verres. This was one of the great cases of antiquity, and the one from which the orator's public career fairly dates. His residence in Sicily had prepared him for this duty; and he secured the conviction of this great criminal, whose peculations and corruptions would amaze our modern New Yorkers and all the "rings" of our great cities combined. But the Prætor of Sicily was a provincial governor, — more like Warren Hastings than Tweed. For this public service Cicero gained more *éclat* than Burke did for his prosecution of Hastings; since Hastings, though a corrupt man, laid, after Clive, the foundation of the English empire in India, and was a man of immense talents, — greater than those of any who has since filled his place. Hence the nation screened Hastings. But Verres had no virtues and no great abilities; he was an outrageous public robber, and hoped, from his wealth and powerful connections, to purchase immunity for his crimes. In the hands of such an orator as Cicero he could not escape the penalty of the law, powerful as he was, even at Rome. This case placed Cicero above Hortensius, hitherto the leader of the Roman bar.

It was at this period that the extant correspondence

of Cicero began, which is the best picture we have of the manners and habits of the Roman aristocracy at the time. History could scarcely spare those famous letters, especially to Atticus, in which also the private life and character of Cicero shine to the most advantage, revealing no vices, no treacheries, — only egotism, vanity, and vacillation, and a way that some have of speaking about people in private very differently from what they say in public, which looks like insincerity. In these letters Cicero appears as a very frank man, genial, hospitable, domestic, witty, whose society and conversation must have been delightful. In no modern correspondence do we see a higher perfection in the polished courtesies and urbanities of social life, with the alloy of vanity, irony, and discontent. But in these letters he also evinces a friendship which is immortal; and what is nobler than the capacity of friendship? In these he not only shines as a cultivated scholar but as a great statesman and patriot, living for the good of his country, though not unmindful of the luxuries of home and the charms of country retirement, and those enjoyments which are ever associated with refined and favored life. We read here of pictures, books, medals, statues, curiosities of every kind, all of which adorned his various villas, as well as his magnificent palace on Mount Palatine, which cost him what would be equal in our money to two hundred and fifty thou-

sand dollars. To keep up this town house, and some fifteen villas in different parts of Italy, and to feast the greatest nobles, like Pompey and Cæsar, would imply that his income was enormous, much greater than that of any modern professional man. And yet he seems to have lived, like Bacon and our Webster, beyond his income, and was in debt the greater part of his life, —another flaw in his character; for I do not wish to paint him without faults, but only as a good as well as a great man, for his times. His private character was as lofty as that of Chatham or Canning,—if we could forget his vanity, which after all is not so offensive as the intellectual pride of Burke and Pitt, and of sundry other great lights who might be mentioned, conscious of their gifts and attainments. There is something very different in the egotism of a silly and self-seeking aristocrat from that of a great benefactor who has something to be proud of, and with whose private experiences the greatest national deeds are connected. I speak of this fault because it has been handled too severely by modern critics. What were the faults of Cicero, compared with those of Theodosius or Constantine, to say nothing of his contemporaries, like Cæsar, before whom so much incense has been burned?

At the age of forty Cicero became Prætor, or Supreme Judge. This office, when it expired, entitled him to a provincial government,—the great ultimate

ambition of a senator; since the administration of a province, even for a single year, usually secured an enormous fortune. But this tempting offer he resigned, since he felt he could not be spared from Rome in such a crisis of public affairs, when the fortunate generals were grasping power and the demagogues were almost preparing the way for despotism. Some might say he was a far-sighted and ambitious statesman, who could not afford to weaken his chances of being made Consul by absence from the capital.

This great office, the consulship, the highest in the gift of the people, — which gave supreme executive control, — was rarely conferred, although elective, upon any but senators of ancient family and enormous wealth. It was as difficult for a “new man” to reach this dignity, under an aristocratic Constitution, as for a commoner a hundred years ago to become prime minister of England. Transcendent talents and services scarcely sufficed. Only generals who had won great military fame, or the highest of the nobles, stood much chance. For a lawyer to aim at the highest office in the State, without a great family to back him, would have been deemed as audacious as for such a man as Burke to aspire to a seat in the cabinet during the reign of George III. A lawyer at Rome, like a lawyer in London, might become a lord chancellor or prætor, but not easily a prime minister: he would

be defeated by aristocratic influence and jealousies. Although the people had the right of election, they voted at the dictation of those who had money and power. Yet Cicero obtained the consulship, probably with the aid of senators, which he justly regarded as a great triumph. It was a very unusual thing. It was more marvellous than for a Jew to reign in Great Britain, or, like Mordecai, in the court of a Persian king.

The most distinguished service of Cicero as consul was to ferret out the conspiracy of Catiline. Now, this traitor belonged to the very highest rank in a Senate of nobles; he was like an ancient duke in the British House of Peers. It was no easy thing for a plebeian consul to bring to justice so great a culprit. He was more formidable than Essex in the reign of Elizabeth, or Bassompierre in the time of Richelieu. He was a man of profligate life, but of marked ability and boundless ambition. He had a band of numerous and faithful followers, armed and desperate. He was also one of those oily and aristocratic demagogues who bewitch the people, — not, as in our times, by sophistries, but by flatteries. He was as debauched as Mirabeau, but without his patriotism, though like him he aimed to overturn the Constitution by allying himself with the democracy. The people, whom he despised, he gained by his money and promises; and he had powerful con-

federates of his own rank, so that he was on the point of deluging Rome with blood, his aim being nothing less than the extermination of the Senate and the magistrates by assassination, and a general division of the public treasure, with personal assumption of public power.

But all his schemes were foiled by Cicero, who added unwearied activity to extraordinary penetration. For this great and signal service Cicero received the highest tribute the State could render. He was called the savior of his country; and he succeeded in staving off for a time the fall of his country's liberties. It was a mournful sight to him to see the ascendancy which demagogues had already gained, since it betokened the approaching destruction of the Constitution, which, good or bad, was dear to him, and which as an aristocrat he sought to conserve.

Cicero's evil star was not Catiline, but Clodius,—another aristocratic demagogue whose crimes he exposed, although he failed to bring him to justice. Clodius was shielded by his powerful connections; and he was, besides, a popular favorite, as well as a petted scion of one of the greatest families. Clodius showed his hostility to Cicero, and sought revenge by artfully causing the people to pass or revive a law that whoever had inflicted capital punishment on a citizen without a trial should be banished. This seemed to the people

to be a protection to their liberties. Now Cicero, when consul, had executed some of the conspirators associated with Catiline, for which he was called the savior of his country. But by the law which was now passed or revived by the influence of Clodius, Cicero was himself a culprit, and it would seem that all the influence of the Senate and his friends could not prevent his exile. He appealed to his friend Pompey, but Pompey turned a deaf ear; and also to Cæsar, but Cæsar was then outside the walls of the city in command of an army. In fact, both these generals wished him out of the way, although they equally admired and feared him; for each of them was bent on being the supreme ruler of Rome.

So it was permitted for the most illustrious patriot which Rome then held to go into exile. What a comment on the demoralization of the times! Here was the best, the most gifted, and the most accomplished man of the Republic,—a man who had rendered in valuable and acknowledged services, that man of consular dignity and one of the leaders of the Senate,—sent into inglorious banishment, on a mere technicality and for an act which saved the State. And the “magnanimous” Cæsar and the “illustrious” Pompey allowed him to go! Where was salvation to a Republic which banished its savior, and for having saved it? The heart sickens over such a fact, although it occurred

two thousand years ago. When the citizens of Rome saw that great man depart mournfully from among them, and to all appearance forever, for having rescued them from violence and slaughter, and by their own act,—they ought to have known that the days of the Republic were numbered. But this only a few far-seeing patriots felt. And not only was Cicero banished, but his palace was burned and his villas confiscated. He was not only disgraced, but ruined; he was an exile and a pauper. What a fall! What an unmerited treatment!

Very few people conceive what a dreadful punishment it was in Greece and Rome to be banished; or, as the formula went, “to be interdicted from fire and water,”—the sacred fire of the hearth, the lustral water which served for sacrifices. The exile was deprived of these by being forced to extinguish the hearth-fire,—the elemental, fundamental religion of a Greek and Roman. “He could not, deprived of this, hold property; having no longer a worship, he had no longer a family. He ceased to be a husband and father; his sons were no longer in his power, his wife was no longer his wife, and when he died he had not the right to be buried in the tombs of his ancestors.”¹

Is it to be wondered at that even so good and great a man as Cicero should bitterly feel his disgrace and

¹ Coulanges: *Ancient City*.

misfortunes? Is it surprising that, philosopher as he was, he should have given way to grief and despondency. He would have been more than human not to have lost his spirits and his hopes. How natural were grief and despair, in such complicated miseries, especially to a religious man! Chrysostom could support *his* exile with dignity; for Christianity had abolished the superstitions of Greece and Rome as to household gods. Cicero could not: he was not great enough for such a martyrdom. It is true we should have esteemed him higher, had he accepted his fate with resignation: no man should yield to despair. Had he been as old as Socrates, and had he accomplished his mission, possibly he would have shown more equanimity. But his work was not yet done. He was cut off in his prime and in the midst of usefulness from his home, his religion, his family, his honor, and his influence; he was utterly ruined. I think the critics make too much of the grief and misery of Cicero in his banishment. We may be disappointed that Cicero was not equal to his circumstances; but we need not be hard on him. My surprise is, not that he was overwhelmed with grief, but that he did not attempt to drown his grief in books and literature. His sole relief was in pathetic and unmanly letters.

The great injustice of this punishment naturally produced a reaction. Nor could the Romans afford to lose

the services of their greatest orator. They also craved the excitement of his speeches, more thrilling and delightful than the performance of any actor. So he was recalled. Cicero ought to have anticipated this; it seems, however, he had that unfortunate temperament which favors alternate depression and exhilaration of spirits, without measure or reason.

His return was a triumph,—a grand ovation, an unbounded tribute to his vanity. His palace was rebuilt at the expense of the State, and his property was restored. His popularity was regained. In fact, his influence was never lost; and, because it was so great, his enemies wished him out of the way. He was one of the few who retain influence after they have lost power.

The excess of his joy on his restoration to home and friends and property and fame and position, was as great as the excess of his grief in his short exile. But this is a defect in temperament, in his mental constitution, rather than a flaw in his character. We could have wished more placidity and equanimity; but to condemn him because he was not great in everything is unjust.

On his return to Rome Cicero resumed his practice in the courts with greater devotion than ever. He was now past fifty years of age, in the prime of his strength and in the height of his forensic fame. But, notwith-

standing his success and honors, his life was saddened by the growing dissensions between Cæsar and Pompey, the decline of public spirit, and the approaching fall of the institutions in which he gloried. It was clear that one or the other of these fortunate generals would soon become the master of the Roman world, and that liberty was about to perish. His eloquence now became sad; he sings the death-song of departing glories; he wails his Jeremiads over the demoralization which was sweeping away not merely liberty, but religion, and extinguishing faith in the world. To console himself he retired to one of his beautiful villas and wrote that immortal essay, "*De Oratore*," which has come down to us entire. His literary genius now blazed equally with his public speeches in the Forum and in the Senate. Literature was his solace and amusement, not a source of profit, or probably of contemporary fame. He wrote treatises on the same principles that he talked with friends, or that Fra Angelico painted pictures. He renewed his attempts in poetry, but failed. His poetry is in the transcendent rhythm of his prose compositions, like that of Madame de Staël, and Macaulay, and Rousseau.

But he was dragged from his literary and forensic life to accept the office of a governor of a province. It was forced upon him,—an honor to him without a charm. Had he been venal and unscrupulous, he would

have seized it with avidity. He was too conscientious to enrich himself by public corruption, as other Senators did, and unless he could accumulate a fortune the command of a distant province was an honorable exile. He was fifty-six years of age when he became Proconsul of Cilicia, an Eastern province; and all historians have united in praising his proconsulate for its justice, its integrity, and its ability. He committed no extortions, and returned home, when his term of office expired, as poor as when he went. One of the highest praises which can be given to a public man who has chances of enriching himself is, that he remains poor. When a member of Congress, known not to be worth ten thousand dollars, returns to his home worth one hundred thousand dollars, the public have an instinct that he has, somehow or other, been untrue to himself and his country. When a great man returns home from Washington poorer than when he went, his influence is apt to survive his power; and this perpetuated influence is the highest glory of a public man,—the glory of Jefferson, of Hamilton, of Washington, like the voice of Gladstone during his retirement. Now Cicero had pre-eminently this influence as long as he lived; and it was ever exerted for the good of his country. Had his country been free, he would have died in honor. But his country was enslaved, and his voice was drowned, and he had to pay the penalty of speaking

the truth about those unscrupulous men who usurped authority.

On his return to Rome the state of public affairs was most alarming. Cæsar and Pompey were in antagonism. He must choose between them, and he distrusted both. Cæsar was the more able, accomplished, and magnanimous, but he was the more unscrupulous and dangerous. He had ventured to cross the Rubicon, — the first general who ever dared thus openly to assail his country's liberties. Pompey was pompous, overrated, and proud, and had been fortunate in the East. But then he sided with the Constitutional authorities, — that is, with the Senate, — so far as his ambition allowed. So Cicero took his side feebly, reluctantly, as the least of the evils he had to choose, but not without vacillation, which is one of the popular charges against him. "His distraction almost took the form of insanity." "His inconsistency was an incoherence." Never did a more wretched man than Cicero resort to Pompey's camp, where he remained until his cause was lost. He returned, after the battle of Pharsalia, a suppliant at the feet of Cæsar, the conqueror. This, to me, is one of his weakest acts. It would have been more lofty and heroic to have perished in the camp of Pompey's sons.

In the midst of these public misfortunes which saddened his soul, his private miseries began. He was

now prematurely an old man, under sixty years of age, almost broken down with grief. His beloved daughter Tullia, with whom his life was bound up, died; and he was divorced from his wife Terentia, — a proceeding the cause of which remains a mystery. Neither in his most confidential letters, nor in his conversations with most intimate friends, does it appear that he ever unbosomed himself, although he was the frankest and most social of men. In his impressive silence he has set one of the noblest examples of a man afflicted with domestic infelicities. He buries his conjugal troubles in eternal silence; although he is forced to give vent to sorrows, so plaintive and bitter that both friend and foe were constrained to pity. He expects no sympathy, even at Rome, for the sundering of conjugal relations, and he communicates no secrets. In his grief and sadness he does, however, a most foolish thing: he marries a young lady one-third his age. She accepted him for his name and rank; he sought her for her beauty, her youth, and her fortune. This union of May with December was of course a failure. Both parties were soon disenchanted and disappointed. Neither party found happiness, only discontent and chagrin. The everlasting incongruities of such a relation — he sixty and she nineteen — soon led to another divorce. *He* expected his young wife to mourn with him the loss of his

daughter Tullia. *She* expected that her society and charms would be a compensation for all that he had lost; yea, more, enough to make him the most fortunate and happy of mortals. In truth, he was too old a man to have married a young woman whatever were the inducements. It was the great folly of his life; an illustration of the fact that, as a general thing, the older a man grows the greater fool he becomes, so far as women are concerned; a folly that disgraced and humiliated the two wisest and greatest men who ever sat on the Jewish throne.

In his accumulated sorrows Cicero now plunged for relief into literary labors. It was thus that his private sorrows were the means which Providence employed to transmit his precious thoughts and experiences to future ages, as the most valued inheritance he could bestow on posterity. What a precious legacy to the mind of the world was the book of "Ecclesiastes," yet by what bitter experiences was its wisdom earned!

It was in the short period when Cæsar rejoiced in the mighty power which he transmitted to the Roman Emperors that Cicero wrote, in comparative retirement, his history of "Roman Eloquence," his inquiry as to the "Greatest Good and Evil," his "Cato," his "Orator," his "Nature of the Gods," and his treatises on "Glory," on "Fate," on "Friendship," on "Old Age," and his grandest work of all, the "Offices,"

—the best manual in ethics which has come down to us from heathen antiquity. In his studious retirement he reminds us of Bacon after his fall, when on his estate, surrounded with friends, and in the enjoyment of elegant leisure, he penned the most valued of his immortal compositions. And in those degenerate days at Rome, when liberty was crushed under foot forever, it is beautiful to see the greatest of Roman statesmen and lawyers consoling himself and instructing posterity by his exhaustive treatises on the fundamental principles of law, of morality, and of philosophy.

The assassination of Cæsar by Roman senators, which Cicero seems to have foreseen, and in which he rejoiced, at this time shocked and disturbed the world. For nearly two thousand years the verdict of the civilized world respecting this great conqueror has been unanimous. But Mr. Froude has attempted to reverse this verdict, as he has in reference to Henry VIII., and as Carlyle—another idolater of force—has attempted in the cases of Oliver Cromwell and Frederick II. This remarkable word-painter, in his *Life of Cæsar*,—which is, however, interesting from first to last, as everything he writes is interesting,—has presented him as an object of unbounded admiration, as I have already noticed in my lecture on Cæsar. Whether in his eagerness to say some-

thing new, or from an ill-concealed hostility to aristocratic and religious institutions, or from an admiration of imperialism, or disdain of the people in their efforts at self-government, this able special pleader seems to hail the Roman conqueror as a benefactor to the cause of civilization. But imperialism crushed all alike,—the people, no longer able to send their best men to the Senate through the higher offices perchance to represent their interests, and the nobles, shorn of the administration of the Empire. Soldiers, not civilians, henceforth were to rule the world,—a dreary thought to a great lawyer like Cicero, or a landed proprietor like Brutus. Even if such a terrible revolution as occurred in Rome under Cæsar may have been ordered wisely by a Superintending Power for those degenerate times, and as a preservation of the peace of the world, that Christianity might take root and spread in countries where all religions were dead,—still, the prostration of what was dearest to the hearts of all true citizens by the sword was a crime; and men are not to be commended for crime, even if those crimes may be palliated. “It must need be that offences come, but woe to those by whom they come.”

Cicero was now sixty-three, prematurely old, discouraged, and heart-broken. And yet he braced himself up for one more grand effort,—for a life and death

struggle with Antony, one of the ablest of Cæsar's generals; a demagogue, eloquent and popular, but outrageously cruel and unscrupulous, and with unbridled passions. Had it not been for his infatuated love of Cleopatra, he probably would have succeeded to the imperial sceptre, for it was by the sword that he too sought to suppress the liberties of the Senate and people. Against him, as the enemy of his country, Cicero did not scruple to launch forth the most terrible of his invectives. In thirteen immortal philippics—some of which, however, were merely written and never delivered, after the fashion of Demosthenes, with whom as an orator and a patriot he can alone be compared—he denounced the unprincipled demagogue and general with every offensive epithet the language afforded,—unveiling his designs, exposing his forgeries, and proving his crimes. Nobler eloquence was never uttered, and wasted, than that with which Cicero pursued, in passionate vengeance, the most powerful and the most unscrupulous man in the Roman Empire. And Cicero must have anticipated the fate which impended over him if Antony were not decreed a public enemy. But the protests of the orator were in vain. He lived to utter them, as a witness of truth; and nothing was left to him but to die.

Of course Antony, when he became Triumvir.—

when he made a bargain that he never meant to keep with Octavius and Lepidus for a division of the Empire between them, — would not spare such an enemy as Cicero. The broken-hearted patriot fled mechanically, with a vacillating mind, when his proscription became known to him, — now more ready to die than live, since all hope in his country's liberties was utterly crushed. Perhaps he might have escaped to some remote corner of the Empire. But he did not wish for life, any more than did Socrates when summoned before his judges. Desponding, uncertain, pursued, he met his fate with the heroism of an ancient philosopher. He surrendered his wearied and exhausted body to the hand of the executioner, and his lofty soul to the keeping of that personal and supreme God in whom he believed as firmly as any man, perhaps, of Pagan antiquity. And surely of him, more than of any other Roman, could it be said, — as Sir Walter Scott said of Pitt, and as Gladstone quoted, and applied to Sir Robert Peel, —

“Now is the stately column broke,
The *beacon light* is quenched in smoke;
The trumpet's silver voice is still,
The warder silent on the hill.”

With the death — so sad — of the most illustrious of the Romans whose fame was not earned on the battlefield, I should perhaps close my lecture. Yet

it would be incomplete without a short notice of those services which—as statesman, orator, and essayist—he rendered to his country and to future ages and nations.

In regard to his services as a statesman, they were rendered chiefly to his day and generation, for he elaborated no system of political wisdom like Burke, which bears (except casually and indirectly) on modern governments and institutions. It was his aim, as a statesman, to continue the Roman Constitution and keep the people from civil war. Nor does he seem to have held, like Rousseau, the *vox populi* as the voice of God. He could find no language sufficiently strong to express his abhorrence of those who led the people for their own individual advancement. He was equally severe on corrupt governors and venal judges. He upheld morality and justice as the only guides in public affairs. He loved popularity, but he loved his country better. He hated anarchy as much as did Burke. Like Bright, he looked upon civil war as the greatest of national calamities. He advocated the most enlightened views, based on the principles of immutable justice. He wished to preserve his country equally from unscrupulous generals and unprincipled politicians.

As for his orations, they also were chiefly designed for his own contemporaries. They are not particularly

valuable to us, except as models of rhetorical composition and transcendent beauty and grace of style. They are not so luminous with fundamental principles as they are vivid with invective, sarcasm, wit, and telling exaggeration, — sometimes persuasive and working on the sensibilities, and at other times full of withering scorn. They are more like the pleadings of an advocate than an appeal to universal reason. He lays down no laws of political philosophy, nor does he soar into the region of abstract truth, evolving great deductions in morals. But as an orator he was transcendently effective, like Demosthenes, though not equal to the Greek in force. His sentences are perhaps too involved for our taste; yet he always swayed an audience, whether the people from the rostrum, or the judges at the bar, or the senators in the Curia. He seldom lost a case; no one could contend with him successfully. He called out the admiration of critics, and even of actors. He had a wonderful electrical influence; his very tones and gestures carried everything before him; his action was superb; and his whole frame quivered from real (or affected) emotion, like Edward Everett in his happiest efforts. He was vehement in gesture, like Brougham and Mirabeau. He was intensely earnest and impressive, like Savonarola. He had exceeding tact, and was master of the passions of his audience. There was an irresistible

music in his tones of voice, like that of St. Bernard when he fanned crusades. He was withering in his denunciations, like Wendell Phillips, whom in person he somewhat resembled. He was a fascination like Pericles, and the people could not long spare him from the excitement he produced. It was their desire to hear him speak which had no small share in producing his recall from banishment. They crowded around him as the people did around Chrysostom in Antioch. He amused like an actor, and instructed like a sage. His sentences are not short, terse, epigrammatic, and direct, but elaborate and artificial. Yet with all his arts of eloquence his soul, fired with great sentiments, rose in its inspired fervor above even the melody of voice, the rhythm of language, and the vehemence of action. A listener, who was not a critic, might fancy it was gesture, voice, and language combined; but, after all, it was the *man* communicating his soul to those who hung upon his lips, and securing conviction by his sincerity and appeals to conscience. He must have had a natural gift for oratory, aside from his learning and accomplishments and rhetorical arts,—a talent very rare and approaching to creative genius. But to his natural gifts—like Luther, or Henry Clay, born an orator—he added marvellous attainments. He had a most retentive memory. He was versed in the whole history of the world. He

was always ready with apt illustrations, which gave interest and finish to his discourses. He was the most industrious and studious man of his age. His attainments were prodigious. He was master of all the knowledge then known, like Gladstone of our day. He was not so learned a man as Varro; but Varro's works have perished, as the great monuments of German scholars are perhaps destined to perish, for lack of style. Cicero's style embalmed his thoughts and made them imperishable. No writer is immortal who is not an artist; Cicero was a consummate artist, and studied the arrangement of sentences, like the historian Tacitus and the Grecian Thucydides.

But greater than as an artist was he in the loftiness of his mind. He appealed to what is noblest in the soul. Transcendent eloquence ever "raises mortals to the skies" and never "pulls angels down." Love of country, love of home, love of friends, love of nature, love of law, love of God, is brought out in all his discourses, exalting the noblest sentiments which move the human soul. He was the first to give to the Latin language beauty and artistic finish. He added to its richness, copiousness, and strength; he gave it music. For style alone he would be valued as one of the immortal classics. All men of culture have admired it, from Augustine to Bossuet, and acknowledged their obligations to him. We accord

to the great poets the formation of languages,—Homer, Dante, Chaucer, Shakspeare; but I doubt if either Virgil or Horace contributed to the formation of the Latin language more than Cicero. Certainly they have not been more studied and admired. In every succeeding age the Orations of Cicero have been one of the first books which have been used as text-books in colleges. Is it not something to have been one of the acknowledged masters of human composition? What a great service did Cicero render to the education of the Teutonic races! Whatever the Latin language has done for the modern world, Cicero comes in for a large share of the glory. More is preserved of his writings than of any other writer of antiquity.

But not for style alone—seen equally in his essays and in his orations—is he admirable. His most enduring claim on the gratitude of the world is the noble tribute he rendered to those truths which save the world. His testimony, considering he was a pagan, is remarkable in reference to what is sound in philosophy and morals. His learning, too, is seen to most advantage in his ethical and philosophical writings. It is true he did not originate, like Socrates and Plato; but he condensed and sifted the writings of the Greeks, and is the best expounder of their philosophy. Who has added substantially to what the Greeks

worked out of their creative brain? I know that no Roman ever added to the domain of speculative thought, yet what Roman ever showed such a comprehension and appreciation of Greek philosophy as did Cicero? He was profoundly versed in all the learning the Grecians ever taught. Like Socrates, he had a contempt for physical science, because science in his day was based on imperfect inductions. There were not facts enough known of the material world to construct sound theories. Physical science at that time was the most uncertain of all knowledge, although there were great pretenders then, as now, who maintained it was the only certainty. But the speculations of scientists disgusted him, for he saw nothing in them upon which to base incontrovertible truth. They were mere dreams and baseless theories on the origin of the universe. They were even puerile; and they were then, as now, atheistic in their tendency. They mocked the consciousness of mankind. They annihilated faith and Providence. At best, they made all things subject to necessity, to an immutable fate, not to an intelligent and ever-present Creator. But Cicero, like Socrates, believed in God and in providential interference,—in striking contrast with Cæsar, who believed nothing. He taught moral obligation, on the basis of accountability to God. He repudiated expediency as the guide in life, and fell back on the prin-

principles of eternal right. As an ethical writer he was profounder and more enlightened than Paley. He did not seek to overturn the popular religion, like Grecian Sophists, only (like Socrates) to overturn ignorance, before a sound foundation could be laid for any system of truth. Nor did he ridicule religion, as Lucian did in after-times, but soared to comprehend it, like the esoteric priests of Egypt in the time of Moses or Pythagoras. He cherished as lofty views of God and his moral government as any moralist of antiquity. And all these lofty views he taught in matchless language,—principles of government, principles of law, of ethics, of theology, giving consolation not only to the men of his day, but to Christian sages in after-times. And there is nothing puerile or dreamy or demoralizing in his teachings; they all are luminous for learning as well as genius. He rivalled Bacon in the variety and profundity of his attainments. He gloried in the certitudes which consciousness reveals, as well as in the facts which experience and history demonstrate. With these he consoled himself in trouble; on these he reposed in the hour of danger. Like Pascal he meditated on the highest truths which task the intellect of man, but, unlike him, did not disdain those weapons which *reason* forged, and which no one used more triumphantly than Pascal himself. And these great meditations he transmitted

for all ages to ponder, as among the most precious of the legacies of antiquity.

Thus did he live, a shining light in a corrupt and godless age, in spite of all the faults which modern critics have enlarged upon in their ambitious desire for novelties, or in their thoughtless or malignant desire to show up human frailties. He was a patriot, taking the side of his country's highest interests; a statesman, seeking to conserve the wisdom of his ancestors; an orator, exposing vices and defending the innocent; a philosopher, unfolding the wisdom of the Greeks; a moralist, laying down the principles of immutable justice; a sage, pondering the mysteries of life; ever active, studious, dignified; the charm and fascination of cultivated circles; as courteous and polished as the ornaments of modern society; revered by friends, feared by enemies, adored by all good people; a kind father, an indulgent husband, a generous friend; hospitable, witty, magnificent, — a most accomplished gentleman, one of the best men of all antiquity. What if he was vain and egotistical and vacillating, and occasionally weak? Can you expect perfection in him who "is born of a woman"? We palliate the backslidings of Christians; we excuse the crimes of a Constantine, a Theodosius, a Cromwell: shall we have no toleration for the frailties of a Pagan, in one of the worst periods of history? I have no patience

with those critics who would hurl him from the pedestal on which he has stood for two thousand years. Contrast him with other illustrious men. How few Romans or Greeks were better than he! How few have rendered such exalted services! And even if he has not perpetuated a faultless character, he has yet bequeathed a noble example; and, more, has transmitted a legacy in the richness of which we forget the faults of the testator,—a legacy of imperishable thought, clothed in the language of imperishable art,—a legacy so valuable that it is the treasured inheritance of all civilized nations, and one which no nation can afford to lose.

AUTHORITIES.

Plutarch's *Life of Cicero*, Appian, Dion Cassius, Velleius Paterculus, are the original authorities,—next to the writings of Cicero himself, especially his *Letters and Orations*. Middleton's *Life* is full, but one-sided. Forsyth takes the opposite side in his *Life*. The last work in English is that of Anthony Trollope. In Smith's *Biographical Dictionary* is an able article. Dr. Vaughan has written an interesting lecture. Merivale has elaborately treated this great man in his valuable *History of the Romans*. Colley Cibber's *Character and Conduct of Cicero*, Drumann's *Roman History*, Rollin's *Ancient History*, *Biographie Universelle*. Mr. Froude alludes to Cicero in his *Life of Cæsar*, taking nearly the same view as Forsyth.

THE

1. The first step is to identify the problem or question that needs to be addressed. This involves understanding the context and the specific requirements of the task.

CLEOPATRA.

THE WOMAN OF PAGANISM.

CLEOPATRA.

THE WOMAN OF PAGANISM.

IT is my object in this lecture to present the condition of woman under the influences of Paganism, before Christianity enfranchised and elevated her. As a type of the Pagan woman I select Cleopatra, partly because she was famous, and partly because she possessed traits and accomplishments which made her interesting in spite of the vices which degraded her. She was a queen, the heir of a long line of kings, and ruled over an ancient and highly civilized country. She was intellectual, accomplished, beautiful, and fascinating. She lived in one of the most interesting capitals of the ancient world, and by birth she was more Greek than she was African or Oriental. She lived, too, in a great age, when Rome had nearly conquered the world; when Roman senators and generals had more power than kings; when Grecian arts and literature were copied by the imperial Romans; when

the rich and fortunate were luxurious and ostentatious beyond all precedent; when life had reached the highest point of material splendor, and yet when luxury had not destroyed military virtues or undermined the strength of the empire. The "eternal city" then numbered millions of people, and was the grandest capital ever seen on this earth, since everything was there concentrated,—the spoils of the world, riches immeasurable, literature and art, palaces and temples, power unlimited,—the proudest centre of civilization which then existed, and a civilization which in its material aspects has not since been surpassed. The civilized world was then most emphatically Pagan, in both spirit and forms. Religion as a controlling influence was dead. Only a very few among speculative philosophers believed in any god, except in a degrading sense,—as a blind inexorable fate, or an impersonation of the powers of Nature. The future state was a most perplexing uncertainty. Epicurean self-indulgence and material prosperity were regarded as the greatest good; and as doubt of the darkest kind hung over the future, the body was necessarily regarded as of more value than the soul. In fact, it was only the body which Paganism recognized as a reality; the soul, God, and immortality were virtually everywhere ignored.

It was in this godless, yet brilliant, age that Cleopatra appears upon the stage, having been born sixty

nine years before Christ,—about a century before the new revolutionary religion was proclaimed in Judea. Her father was a Ptolemy, and she succeeded him on the throne of Egypt when quite young,—the last of a famous dynasty that had reigned nearly three hundred years. The Ptolemies, descended from one of Alexander's generals, reigned in great magnificence at Alexandria, which was the commercial centre of the world, whose ships whitened the Mediterranean,—that great inland lake, as it were, in the centre of the Roman Empire, around whose shores were countless cities and villas and works of art. Alexandria was a city of schools, of libraries and museums, of temples and of palaces, as well as a mart of commerce. Its famous library was the largest in the world, and was the pride of the age and of the empire. Learned men from all countries came to this capital to study science, philosophy, and art. It was virtually a Grecian city, and the language of the leading people was Greek. It was rivalled in provincial magnificence only by Antioch, the seat of the old Syrian civilization, also a Greek capital, so far as the governing classes could make it one. Greece, politically ruined, still sent forth those influences which made her civilization potent in every land.

• Cleopatra, the last of the line of Grecian sovereigns in Egypt, was essentially Greek in her features, her

language, and her manners. There was nothing African about her, as we understand the term African, except that her complexion may have been darkened by the intermarriage of the Ptolemies; and I have often wondered why so learned and classical a man as Story should have given to this queen, in his famous statue, such thick lips and African features, which no more marked her than Indian features mark the family of the Braganzas on the throne of Brazil. She was not even Coptic, like Athanasius and Saint Augustine. On the ancient coins and medals her features are severely classical.

Nor is it probable that any of the peculiarities of the ancient Egyptian kings marked the dynasty of the Ptolemies. No purely Egyptian customs lingered in the palaces of Alexandria. The old deities of Isis and Osiris gave place to the worship of Jupiter, Minerva, and Venus. The wonders of pristine Egypt were confined to Memphis and Thebes and the dilapidated cities of the Nile. The mysteries of the antique Egyptian temples were no more known to the learned and mercantile citizen of Alexandria than they are to us. The pyramids were as much a wonder then as now. The priests and jugglers alike mingled in the crowd of Jews, Syrians, Romans, Greeks, Parthians, Arabs, who congregated in this learned and mercantile city.

So we have a right to presume that Cleopatra, when

she first appeared upon the stage of history as a girl of fourteen, was simply a very beautiful and accomplished Greek princess, who could speak several languages with fluency, as precocious as Elizabeth of England, skilled in music, conversant with history, and surrounded with eminent masters. She was only twenty-one when she was an object of attraction to Cæsar, then in the midst of his triumphs. How remarkable must have been her fascinations if at that age she could have diverted, even for a time, the great captain from his conquests, and chained him to her side! That refined, intellectual old veteran of fifty, with the whole world at his feet, loaded down with the cares of government, as temperate as he was ambitious, and bent on new conquests, would not have been chained and enthralled by a girl of twenty-one, however beautiful, had she not been as remarkable for intellect and culture as she was for beauty. Nor is it likely that Cleopatra would have devoted herself to this weather-beaten old general, had she not hoped to gain something from him besides caresses, — namely, the confirmation of her authority as queen. She also may have had some patriotic motives touching the political independence of her country. Left by her father's will at the age of eighteen joint heir of the Egyptian throne with her brother Ptolemy, she soon found herself expelled from the capital by him and the leading generals of the army, because they did not relish her precocious

activity in government. Her gathered adherents had made but little advance towards regaining her rights when, in August, 48, Cæsar landed in pursuit of Pompey, whom he had defeated at Pharsalia. Pompey's assassination left Cæsar free, and he proceeded to Alexandria to establish himself for the winter. Here the wily and beautiful young exile sought him, and won his interest and his affection. After some months of revelry and luxury, Cæsar left Egypt in 47 to chastise an Eastern rebel, and was in 46 followed to Rome by Cleopatra, who remained there in splendid state until the assassination of Cæsar drove her back to Egypt. Her whole subsequent life showed her to be as cunning and politic as she was luxurious and pleasure-seeking. Possibly she may have loved so interesting and brilliant a man as the great Cæsar, aside from the admiration of his position; but he never became her slave, although it was believed, a hundred years after his death, that she was actually living in his house when he was assassinated, and was the mother of his son Cæsarion. But Froude doubts this; and the probabilities are that he is correct, for, like Macaulay, he is not apt to be wrong in facts, but only in the way he puts them.

Cleopatra was twenty-eight years of age when she first met Antony, — “a period of life,” says Plutarch, “when woman's beauty is most splendid, and her intellect is in full maturity.” We have no account of the

style of her beauty, except that it was transcendent,—absolutely irresistible, with such a variety of expression as to be called infinite. As already remarked, from the long residence of her family in Egypt and intermarriages with foreigners, her complexion may have been darker than that of either Persians or Greeks. It probably resembled that of Queen Esther more than that of Aspasia, in that dark richness and voluptuousness which to some have such attractions; but in grace and vivacity she was purely Grecian,—not like a “blooming Eastern bride,” languid and passive and effeminate, but bright, witty, and intellectual. Shakspeare paints her as full of lively sallies, with the power of adapting herself to circumstances with tact and good nature, like a Madame Récamier or a Maintenon, rather than like a Montespan or a Pompadour, although her nature was passionate, her manner enticing, and her habits luxurious. She did not weary or satiate, like a mere sensual beauty.

“Age cannot wither her, nor custom stale
Her infinite variety.”

She certainly had the power of retaining the conquests she had won,—which rarely happens except with those who are gifted with intellectual radiance and freshness. She held her hold on Antony for eleven years, when he was burdened with great public cares and duties, and when he was forty-two years of age. Such a

superior man as he was intellectually, and, after *Cæsar*, the leading man of the empire,—a statesman as well as soldier,—would not have been enslaved so long by Cleopatra had she not possessed remarkable gifts and attainments, like those famous women who reigned in the courts of the Bourbons in the seventeenth and eighteenth centuries, and who, by their wit and social fascinations, gathered around their thrones the most distinguished men of France, and made them friends as well as admirers. The Pompadours of the world have only a brief reign, and at last become repulsive. But Cleopatra, like *Maintenon*, was always attractive, although she could not lay claim to the virtues of the latter. She was as politic as the French beauty, and as full of expedients to please her lord. She may have revelled in the banquets she prepared for *Antony*, as *Esther* did in those she prepared for *Xerxes*; but with the same intent, to please him rather than herself, and win, from his weakness, those political favors which in his calmer hours he might have shrunk from granting. Cleopatra was a politician as well as a luxurious beauty, and it may have been her supreme aim to secure the independence of Egypt. She wished to beguile *Antony* as she had sought to beguile *Cæsar*, since they were the masters of the world, and had it in their power to crush her sovereignty and reduce her realm to a mere province of the empire. Nor is there

evidence that in the magnificent banquets she gave to the Roman general she ever lost her self-control. She drank, and made him drink, but retained her wits, "laughing him out of patience and laughing him into patience," ascendant over him by raillery, irony, and wit.

And Antony, again, although fond of banquets and ostentation, like other Roman nobles, and utterly unscrupulous and unprincipled, as Roman libertines were, was also general, statesman, and orator. He grew up amid the dangers and toils and privations of Cæsar's camp. He was as greedy of honors as was his imperial master. He was a sunburnt and experienced commander, obliged to be on his guard, and ready for emergencies. No such man feels that he can afford to indulge his appetites, except on rare occasions. One of the leading peculiarities of all great generals has been their temperance. It marked Cæsar, Charlemagne, Gustavus Adolphus, Frederic the Great, Cromwell, and Napoleon. When Alexander gave himself up to banquets, his conquests ended. Even such a self-indulgent, pleasure-seeking man as Louis XIV. always maintained the decencies of society amid his dissipated courtiers. We feel that a man who could discourse so eloquently as Antony did over the dead body of Cæsar was something more than a sensualist or a demagogue. He was also the finest-looking man in Rome, reminding the

people, it is said, of the busts of Hercules. He was lavish, like Cæsar, but, like him, sought popularity, and cared but little what it cost. It is probable that Cicero painted him, in his famous philippics, in darker colors than he deserved, because he aimed to be Cæsar's successor, as he probably would have been but for his infatuation for Cleopatra. Cæsar sent him to Rome as master of the horse, — a position next in power to that of dictator. When Cæsar was assassinated, Antony was the most powerful man of the empire. He was greater than any existing king; he was almost supreme. And after Cæsar's death, when he divided his sovereignty of the world with Octavius and Lepidus, he had the fairest chance of becoming emperor. He had great military experience, the broad Orient as his domain, and half the legions of Rome under his control.

It was when this great man was Triumvir, sharing with only two others the empire of the world, and likely to overpower them, when he was in Asia consolidating and arranging the affairs of his vast department, that he met the woman who was the cause of all his calamities. He was then in Cilicia, and, with all the arrogance of a Roman general, had sent for the Queen of Egypt to appear before him and answer to an accusation of having rendered assistance to Cassius before the fatal battle of Philippi. He had already known and admired Cleopatra in Rome, and it is not improbable

that she divined the secret of his judicial summons. His envoy, struck with her beauty and intelligence, advised her to appear in her best attire. Such a woman scarcely needed such a hint. So, making every preparation for her journey, — money, ornaments, gifts, — a kind of Queen of Sheba, a Zenobia in her pride and glory, a Queen Esther when she had invited the king and his minister to a banquet, — she came to the Cydnus, and ascended the river in a magnificent barge, such as had never been seen before, and prepared to meet her judge, not as a criminal, but as a conqueror, armed with those weapons that few mortals can resist.

“The barge she sat in, like a burnish’d throne,
Burn’d on the water; the poop was beaten gold;
Purple the sails, and so perfumed that
The winds were love-sick with them : the oars were silver,
Which to the tune of flutes kept stroke, and made
The water, which they beat, to follow faster,
As amorous of their strokes. For her own person,
It beggar’d all description : she did lie
In her pavilion (cloth-of-gold of tissue)
O’er-picturing that Venus, where we see
The fancy outwork nature : on each side her
Stood pretty dimpled boys, like smiling Cupids,
With diverse-color’d fans. . . .
Her gentlewomen, like the Nereides,
So many mermaids, tended her i’ the eyes.
. . . At the helm
A seeming mermaid steers. . . .
. From the barge

A strange invisible perfume hits the sense
Of the adjacent wharves. The city cast
Her people out upon her ; and Antony,
Enthron'd i' the market-place, did sit alone,
Whistling to th' air ; which, but for vacancy,
Had gone to gaze on Cleopatra too,
And made a gap in nature."

On the arrival of this siren queen, Antony had invited her to supper,—the dinner of the Romans,—but she, with woman's instinct, had declined, till he should come to her ; and he, with the urbanity of a polished noble,—for such he probably was,—complied, and found a banquet which astonished even him, accustomed as he was to senatorial magnificence, and which, with all the treasures of the East, he could not rival. From that fatal hour he was enslaved. She conquered him, not merely by her display and her dazzling beauty, but by her wit. Her very tones were music. So accomplished was she in languages, that without interpreters she conversed not only with Greeks and Latins, but with Ethiopians, Jews, Arabians, Syrians, Medes, and Parthians. So dazzled and bewitched was Antony, that, instead of continuing the duties of his great position, he returned with Cleopatra to Alexandria, there to keep holiday and squander riches, and, still worse, his precious time, to the shame and scandal of Rome, inglorious and without excuse,—a Samson at the feet of Delilah, or a Hercules throwing away his club to

seize the distaff of Omphale, confessing to the potency of that mysterious charm which the sage at the court of an Eastern prince pronounced the strongest power on earth. Never was a strong man more enthralled than was Antony by this bewitching woman, who exhausted every art to please him. She played at dice with him, drank with him, hunted with him, rambled with him, jested with him, angled with him, flattering and reproving him by turn, always having some new device of pleasure to gratify his senses or stimulate his curiosity. Thus passed the winter of 41-40, and in the spring he was recalled to Rome by political dissensions there.

At this stage, however, it would seem that ambition was paramount with him, not love; for his wife Fulvia having died, he did not marry Cleopatra, but Octavia, sister of Octavius, his fellow-triumvir and general rival. It was evidently from political considerations that he married Octavia, who was a stately and noble woman, but tedious in her dignity, and unattractive in her person. And what a commentary on Roman rank! The sister of a Roman grandee seemed to the ambitious general a greater match than the Queen of Egypt. How this must have piqued the proud daughter of the Ptolemies,—that she, a queen, with all her charms, was not the equal in the eyes of Antony to the sister of Cæsar's heir! But she knew her power, and stifled her

resentment, and waited for her time. She, too, had a political end to gain, and was too politic to give way to anger and reproaches. She was anything but the impulsive woman that some suppose, — but a great actress and artist, as some women are when they would conquer, even in their loves, which, if they do not feign, at least they know how to make appear greater than they are. For about three years Antony cut loose from Cleopatra, and pursued his military career in the East, as the rival of Octavius might, having in view the sovereignty that Cæsar had bequeathed to the strongest man.

But his passion for Cleopatra could not long be suppressed, neither from reasons of state nor from the respect he must have felt for the admirable conduct of Octavia, who was devoted to him, and who was one of the most magnanimous and reproachless women of antiquity. And surely he must have had some great qualities to call out the love of the noblest and proudest woman of the age, in spite of his many vices and his abandonment to a mad passion, forgetful alike both of fame and duty. He had not been two years in Athens, the headquarters of his Eastern Department, before he was called upon to chastise the Parthians, who had thrown off the Roman yoke and invaded other Roman provinces. But hardly had he left Octavia, and set foot again in Asia, before he sent for his Egyptian mistress, and loaded her with presents; not

gold, and silver, and precious stones, and silks, and curious works of art merely, but whole provinces even, — Phœnicia, Syria, Cilicia, and a part of Judea and Arabia, — provinces which belonged not to him, but to the Roman Empire. How indignant must have been the Roman people when they heard of such lavish presents, and presents which he had no right to give! And when the artful Cleopatra feigned illness on the approach of Octavia, pretending to be dying of love, and wasting her body by fasting and weeping by turns, and perhaps tearing her hair in a seeming paroxysm of grief, — for an actress can do even this, — Antony was totally disarmed, and gave up his Parthian expedition altogether, which was treason to the State, and returned to Alexandria more submissive than ever. This abandonment of duty and official trust disgusted and incensed the Romans, so that his cause was weakened. Octavius became stronger every day, and now resolved on reigning alone. This meant another civil war. How strong the party of Antony must have been to keep together and sustain him amid such scandals, treasons, and disgrace!

Antony, perceiving a desperate contest before him, ending in his supremacy or ruin, put forth all his energies, assisted by the contributions of Cleopatra, who furnished two hundred ships and twenty thousand talents, — about twenty million dollars. He had five

Hundred war-vessels, beside galleys, one hundred thousand foot and twelve thousand horse,—one of the largest armies that any Roman general had ever commanded,—and he was attended by vassal kings from the East. The forces of Octavius were not so large, though better disciplined; nor was he a match for Antony in military experience. Antony with his superior forces wished to fight upon the land, but against his better judgment was overruled by Cleopatra, who, having reinforced him with sixty galleys, urged him to contend upon the sea. The rivals met at Actium, where was fought one of the great decisive battles of the world. For a while the fortunes of the day were doubtful, when Cleopatra, from some unexplained motive, or from panic, or possibly from a calculating policy, was seen sailing away with her ships for Egypt. And what was still more extraordinary, Antony abandoned his fleet and followed her. Had he been defeated on the sea, he still had superior forces on the land, and was a match for Octavius. His infatuation ended in a weakness difficult to comprehend in a successful Roman general. And never was infatuation followed by more tragic consequences. Was this madness sent upon him by that awful Power who controls the fate of war and the destinies of nations? Who sent madness upon Nebuchadnezzar? Who blinded Napoleon at the very summit of his greatness? May not that memo-

rable defeat have been ordered by Providence to give consolidation and peace and prosperity to the Roman Empire, so long groaning under the complicated miseries of anarchy and civil war? If an imperial government was necessary for the existing political and social condition of the Roman world,—and this is maintained by most historians,—how fortunate it was that the empire fell into the hands of a man whose subsequent policy was peace, the development of resources of nations, and a vigorous administration of government!

It is generally conceded that the reign of Octavius—or, as he is more generally known, Augustus Cæsar—was able, enlightened, and efficient. He laid down the policy which succeeding emperors pursued, and which resulted in the peace and prosperity of the Roman world until vices prepared the way for violence. Augustus was a great organizer, and the machinery of government which he and his ministers perfected kept the empire together until it was overrun by the New Germanic races. Had Antony conquered at Actium, the destinies of the empire might have been far different. But for two hundred years the world never saw a more efficient central power than that exercised by the Roman emperors or by their ministers. Imperialism at last proved fatal to genius and the higher interests of mankind; but imperialism was the creation of Julius Cæsar, as a real or supposed necessity; it was efficiently

and beneficently continued by his grand-nephew Augustus; and its consolidated strength became an established institution which the civilized world quietly accepted.

The battle of Actium virtually settled the civil war and the fortunes of Antony, although he afterwards fought bravely and energetically; but all to no purpose. And then, at last, his eyes were opened, and Shakespeare makes him bitterly exclaim,—

“ All is lost !

This foul Egyptian hath betrayed me.

. . . Betray'd I am :

O this false soul of Egypt !”

And with his ruin the ruin of his paramour was also settled; yet her resources were not utterly exhausted. She retired into a castle or mausoleum she had prepared for herself in case of necessity, with her most valuable treasures, and sent messengers to Antony, who reported to him that she was dead,—that she had killed herself in despair. He believed it all. His wrath now vanished in his grief. He could not live, or did not wish to live, without her; and he fell upon his own sword. The wound was mortal, but death did not immediately follow. He lived to learn that Cleopatra had again deceived him,—that she was still alive. Even amid the agonies of the shadow of death, and in view of this last fatal lie of hers, he did not upbraid her, but ordered his servants to bear him to her

retreat. Covered with blood, the dying general was drawn up by ropes and through a window — the only entrance to the queen's retreat that was left unbarred — into her presence, and soon expired. Shakspeare has Antony greet Cleopatra with the words, "I am dying, Egypt, dying!" This suggestive theme has been enlarged in a modern song of pathetic eloquence:—

"I am dying, Egypt, dying,
 Ebbs the crimson life-tide fast,
 And the dark Plutonian shadows
 Gather on the evening blast;
 Let thine arms, O Queen, enfold me,
 Hush thy sobs and bow thine ear,
 Listen to the great heart-secrets
Thou; and thou *alone*, must hear.

.

Should the base plebeian rabble
 Dare assail my name at Rome,
 Where my noble spouse Octavia
 Weeps within her widow'd home,
 Seek her; say the gods bear witness —
 Altars, augurs, circling wings —
 That her blood, with mine commingled,
 Yet shall mount the throne of kings.

As for thee, star-ey'd Egyptian!
 Glorious sorceress of the Nile!
 Light the path to Stygian horrors
 With the splendors of thy smile
 I can scorn the Senate's triumphs,
 Triumphant in love like thine.

.

Ah! no more amid the battle

Shall my heart exulting swell:

Isis and Osiris guard thee!

Cleopatra — Rome — farewell!"

Thus perished the great Triumvir, dying like a Roman, whose blinded but persistent love, whatever were its elements, ever shall make his name memorable. All the ages will point to him as a man who gave the world away for the caresses of a woman, and a woman who deceived and ruined him.

As for her, — this selfish, heartless sorceress, gifted and beautiful as she was, — what does she do when she sees her lover dead, — dying for her? Does she share his fate? Not she. What selfish woman ever killed herself for love?

"Some natural tears she shed, but wiped them soon."

She may have torn her clothes, and beaten her breast, and disfigured her face, and given vent to mourning and lamentations. But she does not seek death, nor surrender herself to grief, nor court despair. She renews her strength. She reserves her arts for another victim. She hopes to win Octavius as she had won Julius and Antony; for she was only thirty-nine, and still a queen. And for what? That she might retain her own sovereignty, or the independence of Egypt, — still the most fertile of countries, rich, splendid.

and with grand traditions which went back thousands of years; the oldest, and once the most powerful of monarchies. *Her* love was ever subservient to her interests. Antony gave up ambition for love,—whatever that love was. It took possession of his whole being, not pure and tender, but powerful, strange; doubtless a mad infatuation, and perhaps something more, since it never passed away,—admiration allied with desire, the worship of dazzling gifts, though not of moral virtues. Would such a love have been permanent? Probably not, since the object of it did not shine in the beauty of the soul, but rather in the graces and adornments of the body, intensified indeed by the lustre of bewitching social qualities and the brightness of a cultivated intellect. It is hard to analyze a passionate love between highly gifted people who have an intense development of both the higher and the lower natures, and still more difficult when the idol is a Venus Polyhymnia rather than a Venus Urania. But the love of Antony, whether unwise, or mysterious, or unfortunate, was not feigned or forced: it was real, and it was irresistible; he could not help it. He was enslaved, bound hand and foot. His reason may have rallied to his support, but his will was fettered. He may have had at times dark and gloomy suspicions,—that he was played with, that he was cheated, that he would be deserted, that Cleopatra was false and

treacherous. And yet she reigned over him; he could not live without her. She was all in all to him, so long as the infatuation lasted; and it had lasted fourteen years, with increasing force, in spite of duty and pressing labors, the calls of ambition and the lust of power. In this consuming and abandoned passion, for fourteen years, — so strange and inglorious, and for a woman so unworthy, even if he were no better than she, — we see one of the great mysteries of our complex nature, not uncommon, but insoluble.

I have no respect for Antony, and but little admiration. I speak of such mad infatuation as a humiliating exhibition of human weakness. Any one under its fearful spell is an object of pity. But I have more sympathy for him than for Cleopatra, although she was doubtless a very gifted woman. He was her victim; she was not his. If extravagant and reckless and sensual, he was frank, generous, eloquent, brave, and true to her. She was artful, designing, and selfish, and used him for her own ends, although we do not know that she was perfidious and false to him. But for her he would have ruled the world. He showed himself capable of an enormous sacrifice. She made no sacrifices for him. She could even have transferred her affections, since she afterwards sought to play her blandishments upon his rival. Conceive of Antony, if you can, as loving any one else than her who led him on to ruin. In the very de-

gradation of love we see its sacredness. In his fidelity we find some palliation. Nor does it seem that Octavia, the slighted wife of Antony, gave way to vengeance. Her sense of injury was overshadowed by her pity. This lofty and dignified matron even took his six surviving children, three of whom were Cleopatra's, and brought them up in her own house as her own. Can Paganism show a greater magnanimity?

The fate of Cleopatra was tragic also. She too destroyed herself, not probably by the bite of asps, as is the popular opinion, but by some potent and subtile poison that she ever carried with her, and which had the effect of benumbing the body and making her insensible to pain. Yet she does not kill herself because she cannot survive the death of Antony, but because she is too proud to be carried to Rome to grace the triumph of the new Cæsar. She will not be led a captive princess up the Capitoline Hill. She has an overbearing pride. "Know, sir," says she to Proculeius, "that I

"Will not wait pinion'd at your master's court,
Nor once be chastis'd with the sober eye
Of dull Octavia. . . .
. . . Rather a ditch in Egypt
Be gentle grave to me!"

But whether pride or whether shame was the more powerful motive in committing suicide, I do not read

that she was a victim of remorse. She had no moral sense. Nor did she give way to sentimental grief on the death of Antony. Her grief was blended with disappointment and rage. Nor did she hide her head, but wore a face of brass. She used all her arts to win Octavius. Her resources did not fail her; but she expended them on one of the coldest, most politic, and most astute men that ever lived. And the disappointment that followed her defeat — that she could not enslave another conqueror — was greater than the grief for Antony. Nor during her whole career do we see any signs of that sorrow and humility which, it would seem, should mark a woman who has made so great and fatal a mistake, — cut off hopelessly from the respect of the world and the peace of her own soul. We see grief, rage, despair, in her miserable end, as we see pride and shamefacedness in her gilded life, but not remorse or shame. And when she dies by her own hand, it is not in madness, but to escape humiliation. Suicide was one of the worst features of Pagan antiquity. It was a base and cowardly reluctance to meet the evils of life, as much as indifference to the future and a blunted moral sense.

So much for the woman herself, her selfish spirit, her vile career; but as Cleopatra is one of the best known and most striking examples of a Pagan woman, with qualities and in circumstances peculiarly characteristic

of Paganism, I must make a few remarks on these points.

One of the most noticeable of these is that immorality seems to have been no bar to social position. Some of those who were most attractive and sought after were notoriously immoral. Aspasia, whom Socrates and Pericles equally admired, and whose house was the resort of poets, philosophers, statesmen, and artists, and who is said to have been one of the most cultivated women of antiquity, bore a sullied name. Sappho, who was ever exalted by Grecian poets for the sweetness of her verses, attempted to reconcile a life of pleasure with a life of letters, and threw herself into the sea because of a disappointed passion. Laïs, a professional courtesan, was the associate of kings and sages as well as the idol of poets and priests. Agrippina, whose very name is infamy, was the admiration of courtiers and statesmen. Lucilla, who armed her assassins against her own brother, seems to have ruled the court of Marcus Aurelius.

And all these women, and more who could be mentioned, were — like Cleopatra — cultivated, intellectual, and brilliant. They seem to have reigned for their social fascinations as much as by their physical beauty. Hence, that class of women who with us are shunned and excluded from society were not only flattered and honored, but the class itself seems to have been re-

cruited by those who were the most attractive for their intellectual gifts as well as for physical beauty. No woman, if bright, witty, and beautiful, was avoided because she was immoral. It was the immoral women who often aspired to the highest culture. They sought to reign by making their homes attractive to distinguished men. Their houses seem to have been what the *salons* of noble and fascinating duchesses were in France in the last two centuries. The homes of virtuous and domestic women were dull and wearisome. In fact, the modest wives and daughters of most men were confined to monotonous domestic duties; they were household slaves; they saw but little of what we now call society. I do not say that virtue was not held in honor. I know of no age, however corrupt, when it was not prized by husbands and fathers. I know of no age when virtuous women did not shine at home, and exert a healthful influence upon men, and secure the proud regard of their husbands. But these were not the women whose society was most sought. The drudgeries and slaveries of domestic life among the ancients made women unattractive to the world. The women who were most attractive were those who gave or attended sumptuous banquets, and indulged in pleasures that were demoralizing. Not domestic women, but bright women, carried away those prizes which turned the brain. Those who shone were those that

attached themselves to men through their senses, and possibly through their intellects, and who were themselves strong in proportion as men were weak. For a woman to appear in public assemblies with braided and decorated hair and ostentatious dress, and especially if she displayed any gifts of eloquence or culture, was to proclaim herself one of the immoral, leisurely, educated, dissolute class. This gives point to Saint Paul's strict injunctions to the women of Corinth to dress soberly, to keep silence in the assemblies, etc. The modest woman was to "be in subjection." Those Pagan converts to the "New Way" were to avoid even the appearance of evil.

Thus under Paganism the general influence of women was to pull men down rather than to elevate them, especially those who were attractive in society. Virtuous and domestic women were not sufficiently educated to have much influence except in a narrow circle. Even they, in a social point of view, were slaves. They could be given in marriage without their consent; they were restricted in their intercourse with men; they were confined to their homes; they had but few privileges; they had no books; they led a life of terror from the caprices of their lords and masters, and hence inspired no veneration. The wives and daughters of the rich tyrannized over their servants, decked themselves with costly ornaments, and were merely gilded

toys, whose society was vapid and uninteresting. The wives and daughters of the poor were drudges and menials, without attraction or influence; noisy, quarrelsome, garrulous women, who said the least when they talked the most.

Hence under Paganism home had none of those attractions which, in Christian countries, invest it with such charms. The home of the poor was squalid and repulsive; the home of the rich was gaudy and tinselled enough, but was dull and uninspiring. What is home when women are ignorant, stupid, and slavish? What glitter or artistic splendor can make home attractive when women are mere butterflies or slaves with gilded fetters? Deprive women of education, and especially of that respect which Christian chivalry inspires, and they cannot rise to be the equal companions of men. They are simply their victims or their slaves. What is a home where women are treated as inferiors? Paganism never recognized their equality with men; and if they ever ruled men, it was by appealing to their lower qualities, or resorting to arts and devices which are subversive of all dignity of character. When their personal beauty fled, their power also departed. A faded or homely woman, without intelligence or wit, was a forlorn object in a Pagan home,—to be avoided, derided, despised,—a melancholy object of pity or neglect, so far as companionship goes. She may have

been valued as a cook or drudge, but she was only a menial. Of all those sins of omission of which Paganism is accused, the worst was that it gave to women no mental resources to assist them in poverty, or neglect, or isolation, when beauty or fortune deserted them. No home can be attractive where women have no resources; and women can have no resources outside of domestic duties, unless educated to some art or something calculated to draw out their energies and higher faculties by which they win the respect and admiration, not of men only, but of their own sex.

It was this lack of education which Paganism withheld from women which not only destroyed the radiance of home, but which really made women inferior to men. All writers, poets, and satirists alike speak of the inferiority of women to men, — not physically only, but even intellectually; and some authors made them more vicious than men in natural inclination. And when the mind was both neglected and undervalued, how could respect and admiration be kindled, or continue after sensual charms had passed away? Paganism taught the inequality of the sexes, and produced it; and when this inequality is taught, or believed in, or insisted upon, then farewell to the glory of homes, to all unbought charms, to the graces of domestic life, to everything that gilds our brief existence with the radiance of imperishable joy.

Nor did Paganism offer any consolations to the down-trodden, injured, neglected, uninteresting woman of antiquity. She could not rise above the condition in which she was born. No sympathetic priest directed her thoughts to another and higher and endless life. Nobody wiped away her tears; nobody gave encouragement to those visions of beauty and serenity for which the burdened spirit will, under any oppressions, sometimes aspire to enjoy. No one told her of immortality and a God of forgiveness, who binds up the bleeding heart and promises a future peace and bliss. Paganism was merciful only in this, — that it did not open wounds it could not heal; that it did not hold out hopes and promises it could not fulfil; that it did not remind the afflicted of miseries from which they could not rise; that it did not let in a vision of glories which could never be enjoyed; that it did not provoke the soul to indulge in a bitterness in view of evils for which there was no remedy; that it did not educate the mind for enjoyments which could never be reached; that it did not kindle a discontent with a condition from which there is no escape. If one cannot rise above debasement or misery, there is no use in pointing it out. If the Pagan woman was not seemingly aware of the degradation which kept her down, and from which it was impossible to rise, Paganism did not add stings to her misery by presenting it as an accident which it was

easy to surmount. There would be no contentment or submission among animals if they were endowed with the reason of men. Give to a healthy, but ignorant, coarse, uncultivated country girl, surrounded only with pigs and chickens, almost without neighbors, a glimpse of the glories of cities, the wonders of art, the charms of social life, the triumphs of mind, the capacities of the soul, and would she be any happier, if obliged to remain for life in her rustic obscurity and labor, and with no possible chance of improving her condition? Such was woman under Paganism. She could rise only so far as men lifted her up; and they lifted her up only further to consummate her degradation.

But there was another thing which kept women in degradation. Paganism did not recognize the immaterial and immortal soul: it only had regard to the wants of the body. Of course there were exceptions. There were sages and philosophers among the men, who speculated on the grandest subjects which can elevate the mind to the regions of immortal truth, — like Socrates, Plato, Epictetus, Marcus Aurelius, — even as there were women who rose above all the vile temptations which surrounded them, and were poets, heroines, and benefactors, — like Telessa, who saved Argos by her courage; and Volumnia, who screened Rome from the vengeance of her angry son; and Lucretia, who destroyed herself rather than survive the dishonor of her house. There

are some people who rise and triumph over every kind of oppression and injury. Under Paganism there was the possibility of the emancipation of the soul, but not the probability. Its genius was directed to the welfare of the body, — to utilitarian ends of life, to ornaments and riches, to luxury and voluptuousness, to the pleasures which are brief, to the charms of physical beauty and grace. It could stimulate ambition and inculcate patriotism and sing of love, if it coupled the praises of Venus with the praises of wine. But everything it praised or honored had reference to this life and to the mortal body. It may have recognized the mind, but not the soul, which is greater than the mind. It had no aspirations for future happiness; it had no fears of future misery. Hence the frequency of suicide under disappointment, or ennui, or satiated desire, or fear of poverty, or disgrace, or pain.

And thus, as Paganism did not take cognizance of the soul in its future existence, it disregarded man's highest aspirations. It did not cultivate his graces; it set but a slight value on moral beauty; it thought little of affections; it spurned gentleness and passive virtues; it saw no lustre in the tender eye; it heard no music in the tones of sympathy; it was hard and cold. That which constitutes the richest beatitudes of love it could not see, and did not care for. Ethereal blessedness it despised. That which raises woman highest, it was

indifferent to. The cold atmosphere of Paganism froze her soul, and made her callous to wrongs and sufferings. It destroyed enthusiasm and poetic ardor and the graces which shine in misfortune. Woman was not kindled by lofty sentiments, since no one believed in them. The harmonies of home had no poetry and no inspiration, and they disappeared. The face of woman was not lighted by supernatural smiles. Her caresses had no spiritual fervor, and her benedictions were unmeaning platitudes. Take away the soul of woman, and what is she? Rob her of her divine enthusiasm, and how vapid and commonplace she becomes! Destroy her yearnings to be a spiritual solace, and how limited is her sphere! Take away the holy dignity of the soul, and how impossible is a lofty friendship! Without the amenities of the soul there can be no real society. Crush the soul of a woman, and you extinguish her life, and shed darkness on all who surround her. She cannot rally from pain, or labor, or misfortune, if her higher nature is ignored. Paganism ignored what is grandest and truest in a woman, and she withered like a stricken tree. She succumbed before the cold blasts that froze her noblest impulses, and sunk sullenly into obscurity. Oh, what a fool a man is to make woman a slave! He forgets that though he may succeed in keeping her down, chained and fettered by drudgeries, she will be revenged; that though power

less, she will instinctively learn to hate him; and if she cannot defy him she will scorn him, — for not even a brute animal will patiently submit to cruelty, still less a human soul become reconciled to injustice. And what is the possession of a human body without the sympathy of a living soul?

And hence women, under Paganism, — having no hopes of future joy, no recognition of their diviner attributes, no true scope for energies, no field of usefulness but in a dreary home, no ennobling friendships, no high encouragements, no education, no lofty companionship; utterly unappreciated in what most distinguishes them, and valued only as household slaves or victims of guilty pleasure; adorned and bedecked with trinkets, all to show off the graces of the body alone, and with nothing to show their proud equality with men in influence, if not in power, in mind as well as heart, — took no interest in what truly elevates society. What schools did they teach or even visit? What hospitals did they enrich? What miseries did they relieve? What charities did they contribute to? What churches did they attend? What social gatherings did they enliven? What missions of benevolence did they embark in? What were these to women who did not know what was the most precious thing they had, or when this precious thing was allowed to run to waste? What was there for a woman to do with an unrecognized

soul but gird herself with ornaments, and curiously braid her hair, and ransack shops for new cosmetics, and hunt for new perfumes, and recline on luxurious couches, and issue orders to attendant slaves, and join in seductive dances, and indulge in frivolous gossip, and entice by the display of sensual charms? Her highest aspiration was to adorn a perishable body, and vanity became the spring of life.

And the men, — without the true sanctities and beatitudes of married life, without the tender companionship which cultivated women give, without the hallowed friendships which the soul alone can keep alive, despising women who were either toys or slaves, — fled from their dull, monotonous, and dreary homes to the circus and the theatre and the banqueting hall for excitement or self-forgetfulness. They did not seek society, for there can be no high society where women do not preside and inspire and guide. Society is a Christian institution. It was born among our German ancestors, amid the inspiring glories of chivalry. It was made for women as well as men of social cravings and aspirations, which have their seat in what Paganism ignored. Society, under Paganism, was confined to men, at banquets or symposia, where women seldom entered, unless for the amusement of men, — never for their improvement, and still less for their restraint.

It was not until Christianity permeated the old Pagan civilization and destroyed its idols, that the noble Paulas and Marcellas and Fabiolas arose to dignify human friendships, and give fascination to reunions of cultivated women and gifted men; that the seeds of society were sown. It was not until the natural veneration which the Gothic nations seem to have had for women, even in their native forests, had ripened into devotion and gallantry under the teachings of Christian priests, that the true position of women was understood. And after their equality was recognized in the feudal castles of the Middle Ages, the *salons* of the seventeenth and eighteenth centuries established their claims as the inspiring geniuses of what we call society. Then, and not till then, did physical beauty pale before the brilliancy of the mind and the radiance of the soul, — at last recognized as the highest charm of woman. The leaders of society became, not the ornamented and painted *heteræ* which had attracted Grecian generals and statesmen and men of letters, but the witty and the genial and the dignified matrons who were capable of instructing and inspiring men superior to themselves, with eyes beaming with intellectual radiance, and features changing with perpetual variety. Modern society, created by Christianity, — since only Christianity recognizes what is most truly attractive and ennobling among women. — is a great

advance over the banquets of imperial Romans and the symposia of gifted Greeks.

But even this does not satisfy woman in her loftiest aspirations. The soul which animates and inspires her is boundless. Its wants cannot be fully met even in an assemblage of wits and beauties. The soul of Madame de Staël pined amid all her social triumphs. The soul craves friendships, intellectual banquetings, and religious aspirations. And unless the emancipated soul of woman can have these wants gratified, she droops even amid the glories of society. She is killed, not as a hero perishes on a battle-field; but she dies, as Madame de Maintenon said that she died, amid the imposing splendors of Versailles. It is only the teachings and influences of that divine religion which made Bethany the centre of true social banquetings to the wandering and isolated Man of Sorrows, which can keep the soul alive amid the cares, the burdens, and the duties which bend down every son and daughter of Adam, however gilded may be the outward life. How grateful, then, should women be to that influence which has snatched them from the pollutions and heartless slaveries of Paganism, and given dignity to their higher nature! It is to them that it has brought the greatest boon, and made them triumphant over the evils of life. And how thoughtless, how misguided, how ungrateful is that woman who would exchange the priceless blessings which Chris-

tianity has brought to her for those ornaments, those excitements, and those pleasures which ancient Paganism gave as the only solace for the loss and degradation of her immortal soul!

PAGAN SOCIETY.

GLORY AND SHAME.

WE have now surveyed what was most glorious in the States of antiquity. We have seen a civilization which in many respects rivals all that modern nations have to show. In art, in literature, in philosophy, in laws, in the mechanism of government, in the cultivated face of Nature, in military strength, in æsthetic culture, the Greeks and Romans were our equals. And this high civilization was reached by the native and unaided strength of man; by the power of will, by courage, by perseverance, by genius, by fortunate circumstances. We are filled with admiration by all these trophies of genius, and cannot but feel that only superior races could have accomplished such mighty triumphs.

Yet all this splendid exterior was deceptive; for the deeper we penetrate the social condition of the people, the more we feel disgust and pity supplanting all feelings of admiration and wonder. The Roman

empire especially, which had gathered into its strong embrace the whole world, and was the natural inheritor of all the achievements of all the nations, in its shame and degradation suggests melancholy feelings in reference to the destiny of man, so far as his happiness and welfare depend upon his own unaided efforts.

It is a sad picture of oppression, injustice, crime, and wretchedness which I have now to present. Glory is succeeded by shame, strength by weakness, and virtue by vice. The condition of the mass is deplorable, and even the great and fortunate shine in a false and fictitious light. We see laws, theoretically good, practically perverted, and selfishness and egotism the mainsprings of life; we see energies misdirected, and art corrupted. All noble aspirations have fled, and the good and the wise retire from active life in despair and misanthropy. Poets flatter the tyrants who trample on human rights, while sensuality and luxurious pleasure absorb the depraved thoughts of a perverse generation.

The first thing which arrests our attention as we survey the civilized countries of the old world, is the imperial despotism of Rome. The empire indeed enjoyed quietude, and society was no longer rent by factions and parties. Demagogues no longer disturbed the public peace, nor were the provinces ransacked

and devastated to provide for the means of carrying on war. So long as men did not oppose the government they were safe from molestation, and were left to pursue their business and pleasure in their own way. Imperial cruelty was not often visited on the humble classes. It was the policy of the emperors to amuse and flatter the people, while depriving them of political rights. Hence social life was free. All were at liberty to seek their pleasures and gains; all were proud of their metropolis, with its gilded glories and its fascinating pleasures. Outrages, extortions, and disturbances were punished. Order reigned, and all classes felt secure; they could sleep without fear of robbery or assassination. In short, all the arguments which can be adduced in favor of despotism in contrast with civil war and violence, show that it was beneficial in its immediate effects.

Nevertheless, it was a most lamentable change from that condition of things which existed before the civil wars. Roman liberties were prostrated forever; noble sentiments and aspirations were rebuked. Under the Emperors we read of no more great orators like Cicero, battling for human rights and defending the public weal. Eloquence was suppressed. Nor was there liberty of speech even in the Senate. It was treason to find fault with any public acts. From the Pillars of Hercules to the Caspian Sea one stern will ruled

all classes and orders. No one could fly from the agents and ministers of the Emperor; he controlled the army, the Senate, the judiciary, the internal administration of the empire, and the religious worship of the people; all offices, honors, and emoluments emanated from him. All influences conspired to elevate the man whom no one could hope successfully to rival. Revolt was madness, and treason absurdity. Nor did the Emperors attempt to check the gigantic social evils of the empire. They did not seek to prevent irreligion, luxury, slavery, and usury, the encroachments of the rich upon the poor, the tyranny of foolish fashions, demoralizing sports and pleasures, money-making, and all the follies which lax principles of morality allowed; they fed the rabble with corn, oil, and wine, and thus encouraged idleness and dissipation. The world never saw a more rapid retrogression in human rights, or a greater prostration of liberties. Taxes were imposed according to the pleasure or necessities of the government. Provincial governors became still more rapacious and cruel; judges hesitated to decide against the government. Patriotism, in its most enlarged sense, became an impossibility; all lofty spirits were crushed. Corruption in all forms of administration fearfully increased, for there was no safeguard against it.

Theoretically, absolutism may be the best govern-

ment, if rulers are wise and just; but practically, as men are, despotisms are generally cruel and revengeful. Despotism implies slavery, and slavery is the worst condition of mankind.

It cannot be questioned that many virtuous princes reigned at Rome, who would have ornamented any age or country. Titus, Hadrian, Marcus Aurelius, Antoninus Pius, Alexander Severus, Tacitus, Probus, Carus, Constantine, Theodosius, were all men of remarkable virtues as well as talents. They did what they could to promote public prosperity. Marcus Aurelius was one of the purest and noblest characters of antiquity. Theodosius for genius and virtue ranks with the most illustrious sovereigns that ever wore a crown, — with Charlemagne, with Alfred, with William III., with Gustavus Adolphus.

But it matters not whether the Emperors were good or bad, if the régime to which they consecrated their energies was exerted to crush the liberties of mankind. The imperial despotism, whether brilliant or disgraceful, was a mournful retrograde step in civilization; it implied the extinction of patriotism and the general degradation of the people, and would have been impossible in the days of Cato, Scipio, or Metellus.

If we turn from the Emperors to the class which before the dictatorship of Julius Cæsar had the ascendancy in the State, and for several centuries the

supreme power, we shall find but little that is flattering to a nation or to humanity. Under the Emperors the aristocracy had degenerated in morals as well as influence. They still retained their enormous fortunes, originally acquired as governors of provinces, and continually increased by fortunate marriages and speculations. Indeed, nothing was more marked and melancholy at Rome than the vast disproportion in fortunes. In the better days of the republic, property was more equally divided; the citizens were not ambitious for more land than they could conveniently cultivate. But the lands, obtained by conquest, gradually fell into the possession of powerful families. The classes of society widened as great fortunes were accumulated; pride of wealth kept pace with pride of ancestry; and when plebeian families had obtained great estates, they were amalgamated with the old aristocracy. The equestrian order, founded substantially on wealth, grew daily in importance. Knights ultimately rivalled senatorial families. Even freedmen in an age of commercial speculation became powerful for their riches. The pursuit of money became a passion, and the rich assumed all the importance and consideration which had once been bestowed upon those who had rendered great public services.

As the wealth of the world flowed naturally to the capital, Rome became a city of princes, whose for-

tunes were almost incredible. It took eighty thousand dollars a year to support the ordinary senatorial dignity. Some senators owned whole provinces. Trimalchio, a rich freedman whom Petronius ridiculed could afford to lose thirty millions of sesterces in a single voyage without sensibly diminishing his fortune. Pallas, a freedman of the Emperor Claudius possessed a fortune of three hundred millions of sesterces. Seneca, the philosopher, amassed an enormous fortune.

As the Romans were a sensual, ostentatious, and luxurious people, they accordingly wasted their fortunes by an extravagance in their living which has had no parallel. The pleasures of the table and the cares of the kitchen were the most serious avocation of the aristocracy in the days of the greatest corruption. They had around them regular courts of parasites and flatterers, and they employed even persons of high rank as their chamberlains and stewards. Carving was taught in celebrated schools, and the masters of this sublime art were held in higher estimation than philosophers or poets. Says Juvenal, —

“To such perfection now is carving brought,
That different gestures by our curious men
Are used for different dishes, hare or hen.”

Their entertainments were accompanied with everything which could flatter vanity or excite the passions:

musicians, male and female dancers, players of farce and pantomime, jesters, buffoons, and gladiators exhibited, while the guests reclined at table after the fashion of the Orientals. The tables were made of Thuja-root, with claws of ivory or Delian bronze. Even Cicero, in an economical age, paid six hundred and fifty pounds for his banqueting-table. Gluttony was carried to such a point that the sea and earth scarcely sufficed to set off their tables; they ate as delicacies water-rats and white worms. Fish were the chief object of the Roman epicures, of which the *mullus*, the *rhombus*, and the *asellus* were the most valued; it is recorded that a mullus (sea barbel), weighing but eight pounds, sold for eight thousand sesterces. Oysters from the Lucrine Lake were in great demand; snails were fattened in ponds for cooking, while the villas of the rich had their piscinæ filled with fresh or salt-water fish. Peacocks and pheasants were the most highly esteemed among poultry, although the absurdity prevailed of eating singing-birds. Of quadrupeds, the greatest favorite was the wild boar, — the chief dish of a grand *cœna*, — coming whole upon the table; and the practised gourmand pretended to distinguish by the taste from what part of Italy it came. Dishes, the very names of which excite disgust, were used at fashionable banquets. and held in high esteem. Martial devotes two

entire books of his "Epigrams" to the various dishes and ornaments of a Roman banquet.

The extravagance of that period almost surpasses belief. Cicero and Pompey one day surprised Lucullus at one of his ordinary banquets, when he expected no guests, and even that cost fifty thousand drachmas, — about four thousand dollars; his table-couches were of purple, and his vessels glittered with jewels. The halls of Heliogabalus were hung with cloth of gold, enriched with jewels; his table and plate were of pure gold; his couches were of massive silver, and his mattresses, covered with carpets of cloth of gold, were stuffed with down found only under the wings of partridges. His suppers never cost less than one hundred thousand sesterces. Crassus paid one hundred thousand sesterces for a golden cup. Banqueting-rooms were strewn with lilies and roses. Apicius, in the time of Trajan, spent one hundred millions of sesterces in debauchery and gluttony; having only ten millions left, he ended his life with poison, thinking he might die of hunger. Things were valued for their cost and rarity rather than their real value. Enormous prices were paid for carp, the favorite dish of the Romans as of the Chinese. Drusillus, a freedman of Claudius, caused a dish to be made of five hundred pounds weight of silver. Vitellius had one made of such prodigious size that he was

obliged to build a furnace on purpose for it; and at a feast which he gave in honor of this dish, it was filled with the livers of the scarrus (fish), the brains of peacocks, the tongues of parrots, and the roes of lampreys caught in the Carpathian Sea.

The nobles squandered money equally on their banquets, their stables, and their dress; and it was to their crimes, says Juvenal, that they were indebted for their gardens, their palaces, their tables, and their fine old plate.

Unbounded pride, insolence, inhumanity, selfishness, and scorn marked this noble class. Of course there were exceptions, but the historians and satirists give the saddest pictures of their cold-hearted depravity. The sole result of friendship with a great man was a meal, at which flattery and sycophancy were expected; but the best wine was drunk by the host, instead of by the guest. Provinces were ransacked for fish and fowl and game for the tables of the great, and sensualism was thought to be no reproach. They violated the laws of chastity and decorum; they scourged to death their slaves; they degraded their wives and sisters; they patronized the most demoralizing sports; they enriched themselves by usury and monopolies; they practised no generosity, except at their banquets, when ostentation balanced their avarice; they measured everything by the money-

standard; they had no taste for literature, but they rewarded sculptors and painters who prostituted art to their vanity or passions; they had no reverence for religion, and ridiculed the gods. Their distinguishing vices were meanness and servility, the pursuit of money by every artifice, the absence of honor, and unblushing sensuality.

Gibbon has eloquently abridged the remarks of Ammianus Marcellinus respecting these people:—

“They contend with each other in the empty vanity of titles and surnames. They affect to multiply their likenesses in statues of bronze or marble; nor are they satisfied unless these statues are covered with plates of gold. They boast of the rent-rolls of their estates; they measure their rank and consequence by the loftiness of their chariots and the weighty magnificence of their dress; their long robes of silk and purple float in the wind, and as they are agitated by art or accident they discover the under garments, the rich tunics embroidered with the figures of various animals. Followed by a train of fifty servants, and tearing up the pavement, they move along the streets as if they travelled with post-horses; and the example of the senators is boldly imitated by the matrons and ladies, whose covered carriages are continually driving round the immense space of the city and suburbs. Whenever they condescend to enter the public baths, they assume, on their entrance, a tone of loud and insolent command, and maintain a haughty demeanor, which perhaps might have been excused in the great Marcellus

after the conquest of Syracuse. Sometimes these heroes undertake more arduous achievements: they visit their estates in Italy, and procure themselves, by servile hands, the amusements of the chase. And if at any time, especially on a hot day, they have the courage to sail in their gilded galleys from the Lucrine Lake to their elegant villas on the sea-coast of Puteoli and Cargeta, they compare these expeditions to the marches of Cæsar and Alexander; yet should a fly presume to settle on the silken folds of their gilded umbrellas, should a sunbeam penetrate through some unguarded chink, they deplore their intolerable hardships, and lament, in affected language, that they were not born in the regions of eternal darkness. In the exercise of domestic jurisdiction they express an exquisite sensibility for any personal injury, and a contemptuous indifference for the rest of mankind. When they have called for warm water, should a slave be tardy in his obedience, he is chastised with a hundred lashes; should he commit a wilful murder, his master will mildly observe that he is a worthless fellow, and shall be punished if he repeat the offence. If a foreigner of no contemptible rank be introduced to these senators, he is welcomed with such warm professions that he retires charmed with their affability; but when he repeats his visit, he is surprised and mortified to find that his name, his person, and his country are forgotten. The modest, the sober, and the learned are rarely invited to their sumptuous banquets, only the most worthless of mankind, — parasites who applaud every look and gesture, who gaze with rapture on marble columns and variegated pavements, and strenuously

praise the pomp and elegance which he is taught to consider as a part of his personal merit. At the Roman table the birds, the squirrels, the fish, which appear of uncommon size, are contemplated with curious attention, and notaries are summoned to attest, by authentic record, their real weight. Another method of introduction into the houses of the great is skill in games, which is a sure road to wealth and reputation. A master of this sublime art, if placed at a supper below a magistrate, displays in his countenance a surprise and indignation which Cato might be supposed to feel when refused the prætorship. The acquisition of knowledge seldom engages the attention of the nobles, who abhor the fatigue and disdain the advantages of study; and the only books they peruse are the 'Satires of Juvenal,' or the fabulous histories of Marius Maximus. The libraries they have inherited from their fathers are secluded, like dreary sepulchres, from the light of day; but the costly instruments of the theatre — flutes and hydraulic organs — are constructed for their use. In their palaces sound is preferred to sense, and the care of the body to that of the mind. The suspicion of a malady is of sufficient weight to excuse the visits of the most intimate friends. The prospect of gain will urge a rich and gouty senator as far as Spoleta; every sentiment of arrogance and dignity is suppressed in the hope of an inheritance or legacy, and a wealthy, childless citizen is the most powerful of the Romans. The distress which follows and chastises extravagant luxury often reduces the great to use the most humiliating expedients. When they wish to borrow, they employ the

base and supplicating style of the slaves in the comedy ; but when they are called upon to pay, they assume the royal and tragic declamations of the grandsons of Hercules. If the demand is repeated, they readily procure some trusty sycophant to maintain a charge of poison or magic against the insolent creditor, who is seldom released from prison until he has signed a discharge of the whole debt. And these vices are mixed with a puerile superstition which disgraces their understanding. They listen with confidence to the productions of haruspices, who pretend to read in the entrails of victims the signs of future greatness and prosperity ; and this superstition is observed among those very sceptics who impiously deny or doubt the existence of a celestial power."

Such, in the latter days of the empire, was the leading class at Rome, and probably also in the cities which aped the fashions of the capital. Frivolity and luxury loosened all the ties of society. They were bound up in themselves, and had no care for the people except as they might extract more money from them.

As for the miserable class whom the patricians oppressed, their condition became worse every day from the accession of the Emperors. The plebeians had ever disdained those arts which now occupied the middle classes ; these were intrusted to slaves. Originally, they employed themselves upon the lands which had been obtained by conquest ; but these lands were

gradually absorbed or usurped by the large proprietors. The small farmers, oppressed with debt and usury, parted with their lands to their wealthy creditors. Even in the time of Cicero, it was computed that there were only about two thousand citizens possessed of independent property. These two thousand persons owned the world; the rest were dependent and powerless, and would have perished but for largesses. Monthly distributions of corn were converted into daily allowance for bread. The people were amused with games and festivals, fed like slaves, and of course lost at last even the semblance of manliness and independence. They loitered in the public streets, and dissipated in gaming their miserable pittance; they spent the hours of the night in the lowest resorts of crime and misery, they expired in wretched apartments without attracting the attention of government; pestilence, famine, and squalid misery thinned their ranks, and they would have been annihilated but for constant accession to their numbers from the provinces.

In the busy streets of Rome might be seen adventurers from all parts of the world, disgraced by all the various vices of their respective countries. They had no education, and but small religious advantages; they were held in terror by both priests and nobles, — the priest terrifying them with Egyptian sorceries, the nobles crushing them by iron weight; like lazzaroni

they lived in the streets, or were crowded into filthy tenements; a gladiatorial show delighted them, but the circus was their peculiar joy,—here they sought to drown the consciousness of their squalid degradation; they were sold into slavery for trifling debts; they had no homes. The poor man had no ambition or hope; his wife was a slave; his children were precocious demons, whose prattle was the cry for bread, whose laughter was the howl of pandemonium, whose sports were the tricks of premature iniquity, whose beauty was the squalor of disease and filth; he fled from a wife in whom he had no trust, from children in whom he had no hope, from brothers for whom he felt no sympathy, from parents for whom he felt no reverence; the circus was his home, the fights of wild beasts were his consolation; the future was a blank, death was the release from suffering. There were no hospitals for the sick and the old, except one on an island in the Tiber; the old and helpless were left to die, unpitied and unconsolated. Suicide was so common that it attracted no attention.

Superstition culminated at Rome, for there were seen the priests and devotees of all the countries that it governed,—“the dark-skinned daughters of Isis, with drum and timbrel and wanton mien; devotees of the Persian Mithras; emasculated Asiatics; priests of Cybele, with their wild dances and discordant cries -

worshippers of the great goddess Diana ; barbarian captives with the rites of Teuton priests ; Syrians, Jews, Chaldaean astrologers, and Thessalian sorcerers. . . . The crowds which flocked to Rome from the eastern shores of the Mediterranean brought with them practices extremely demoralizing. The awful rites of initiation, the tricks of magicians, the pretended virtues of amulets and charms, the riddles of emblematical idolatry with which the superstition of the East abounded, amused the languid voluptuaries who had neither the energy for a moral belief nor the boldness requisite for logical scepticism."

We cannot pass by, in this enumeration of the different classes of Roman society, the number and condition of slaves. A large part of the population belonged to this servile class. Originally brought in by foreign conquest, it was increased by those who could not pay their debts. The single campaign of Regulus introduced as many captives as made up a fifth part of the whole population. Four hundred were maintained in a single palace, at a comparatively early period ; a freedman in the time of Augustus left behind him forty-one hundred and sixteen ; Horace regarded two hundred as the suitable establishment for a gentleman ; some senators owned twenty thousand. Gibbon estimates the number of slaves at about sixty millions, — one-half of the whole popu-

lation. One hundred thousand captives were taken in the Jewish war, who were sold as slaves, and sold as cheap as horses. William Blair supposes that there were three slaves to one freeman, from the conquest of Greece to the reign of Alexander Severus. Slaves often cost two hundred thousand sesterces, yet everybody was eager to possess a slave. At one time the slave's life was at the absolute control of his master; he could be treated at all times with brutal severity. Fettered and branded, he toiled to cultivate the lands of an imperious master, and at night was shut up in a subterranean cell. The laws hardly recognized his claim to be considered a moral agent, — he was *secundum hominum genus*; he could acquire no rights, social or political, — he was incapable of inheriting property, or making a will, or contracting a legal marriage; his value was estimated like that of a brute; he was a thing and not a person, “a piece of furniture possessed of life;” he was his master's property, to be scourged, or tortured, or crucified. If a wealthy proprietor died under circumstances which excited suspicion of foul play, his whole household was put to torture. It is recorded that on the murder of a man of consular dignity by a slave, every slave in his possession was condemned to death. Slaves swelled the useless rabbles of the cities, and devoured the revenues of the State. All

manual labor was done by slaves, in towns as well as the country; they were used in the navy to propel the galleys. Even the mechanical arts were cultivated by the slaves. Nay more, slaves were schoolmasters, secretaries, actors, musicians, and physicians, for in intelligence they were often on an equality with their masters. Slaves were procured from Greece and Asia Minor and Syria, as well as from Gaul and the African deserts; they were white as well as black. All captives in war were made slaves, also unfortunate debtors; sometimes they could regain their freedom, but generally their condition became more and more deplorable. What a state of society when a refined and cultivated Greek could be made to obey the most offensive orders of a capricious and sensual Roman, without remuneration, without thanks, without favor, without redress! What was to be expected of a class who had no object to live for? They became the most degraded of mortals, ready for pillage, and justly to be feared in the hour of danger.

Slavery undoubtedly proved the most destructive canker of the Roman State. It was this social evil, more than political misrule, which undermined the empire. Slavery proved at Rome a monstrous curse, destroying all manliness of character, creating contempt of honest labor, making men timorous yet cruel, idle, frivolous, weak, dependent, powerless. The em-

pire might have lasted centuries longer but for this incubus, the standing disgrace of the Pagan world. Paganism never recognized what is most noble and glorious in man; never recognized his equality, his common brotherhood, his natural rights. It had no compunction, no remorse in depriving human beings of their highest privileges; its whole tendency was to degrade the soul, and to cause forgetfulness of immortality. Slavery thrives best when the generous instincts are suppressed, when egotism, sensuality, and pride are the dominant springs of human action.

The same influences which tended to rob man of the rights which God has given him, and produce cruelty and heartlessness in the general intercourse of life, also tended to degrade the female sex. In the earlier age of the republic, when the people were poor, and life was simple and primitive, and heroism and patriotism were characteristic, woman was comparatively virtuous and respected; she asserted her natural equality, and led a life of domestic tranquillity, employed upon the training of her children, and inspiring her husband to noble deeds. But under the Emperors these virtues had fled. Woman was miserably educated, being taught by a slave, or some Greek chambermaid, accustomed to ribald conversation, and fed with idle tales and silly superstitions; she was regarded as more vicious in natural inclination than man, and was

chiefly valued for household labors; she was reduced to dependence; she saw but little of her brothers or relatives; she was confined to her home as if it were a prison; she was guarded by eunuchs and female slaves; she was given in marriage without her consent; she could be easily divorced; she was valued only as a domestic servant, or as an animal to prevent the extinction of families; she was regarded as the inferior of her husband, to whom she was a victim, a toy, or a slave. Love after marriage was not frequent, since woman did not shine in the virtues by which love is kept alive. She became timorous or frivolous, without dignity or public esteem; her happiness was in extravagant attire, in elaborate hair-dressings, in rings and bracelets, in a retinue of servants, in gilded apartments, in luxurious couches, in voluptuous dances, in exciting banquets, in demoralizing spectacles, in frivolous gossip, in inglorious idleness. If virtuous, it was not so much from principle as from fear. Hence she resorted to all sorts of arts to deceive her husband; her genius was sharpened by perpetual devices, and cunning was her great resource. She cultivated no lofty friendships; she engaged in no philanthropic mission; she cherished no ennobling sentiments; she kindled no chivalrous admiration. Her amusements were frivolous, her taste vitiated, her education neglected, her rights violated, her sympathy despised, her

aspirations scorned. And here I do not allude to great and infamous examples that history has handed down in the sober pages of Suetonius and Tacitus, or that unblushing depravity which stands out in the bitter satires of those times; I speak not of the adultery, the poisoning, the infanticide, the debauchery, the cruelty of which history accuses the Messalinas and Agrippinas of imperial Rome; I allude not to the orgies of the Palatine Hill, or the abominations which are inferred from the paintings of Pompeii, — I mean the general frivolity and extravagance and demoralization of the women of the Roman empire. Marriage was considered inexpedient unless large dowries were brought to the husband. Numerous were the efforts of Emperors to promote honorable marriages, but the relation was shunned. Courtesans usurped the privileges of wives, and with unblushing effrontery. A man was derided who contemplated matrimony, for there was but little confidence in female virtue or capacity, and woman lost all her fascination when age had destroyed her beauty; even her very virtues were distasteful to her self-indulgent husband. When, as sometimes happened, the wife gained the ascendancy by her charms, she was tyrannical; her relatives incited her to despoil her husband; she lived amid incessant broils; she had no care for the future, and exceeded man in prodigality. “The government of her house is no

more merciful," says Juvenal, "than the court of a Sicilian tyrant." In order to render herself attractive, she exhausted all the arts of cosmetics and elaborate hair-dressing; she delighted in magical incantations and love-potions. In the bitter satire of Juvenal we get an impression most melancholy and loathsome:—

"'T were long to tell what philters they provide,
What drugs to set a son-in-law aside, —
Women, in judgment weak, in feeling strong,
By every gust of passion borne along.
To a fond spouse a wife no mercy shows;
Though warmed with equal fires, she mocks his woes,
And triumphs in his spoils; her wayward will
Defeats his bliss and turns his good to ill.
Women support the bar; they love the law,
And raise litigious questions for a straw.
Nay, more, they fence! who has not marked their oil,
Their purple rigs, for this preposterous toil!
A woman stops at nothing; when she wears
Rich emeralds round her neck, and in her ears
Pearls of enormous size, — these justify
Her faults, and make all lawful in her eye.
More shame to Rome! in every street are found
The essenced Lypanti, with roses crowned;
The gay Miletan and the Tarentine,
Lewd, petulant, and reeling ripe with wine!"

In the sixth satire of Juvenal is found the most severe delineation of woman that ever mortal penned. Doubtless he is libellous and extravagant, for only

infamous women can stoop to such arts and degradations as would seem to have been common in his time. But with all his probable exaggeration, we are forced to feel that but few women, even in the highest class, except those converted to Christianity, showed the virtues of a Lucretia, a Volumnia, a Cornelia, or an Octavia. The lofty virtues of a Perpetua, a Felicitas, an Agnes, a Paula, a Blessilla, a Fabiola, would have adorned any civilization; but the great mass were, what they were in Greece even in the days of Pericles, what they have ever been under the influence of Paganism, what they ever will be without Christianity to guide them,—victims or slaves of man, revenging themselves by squandering his wealth, stealing his secrets, betraying his interests, and deserting his home.

Another essential but demoralizing feature of Roman society was to be found in the games and festivals and gladiatorial shows, which accustomed the people to unnatural excitement and familiarity with cruelty and suffering. They made all ordinary pleasures insipid; they ended in making homicide an institution. The butcheries of the amphitheatre exerted a fascination which diverted the mind from literature, art, and the enjoyments of domestic life. Very early they were the favorite sport of the Romans. Marcus and Decimus Brutus employed gladiators in celebrating the obsequies

of their fathers, nearly three centuries before Christ. "The wealth and ingenuity of the aristocracy were taxed to the utmost to content the populace and provide food for the indiscriminate slaughter of the circus, where brute fought with brute, and man again with man, or where the skill and weapons of the latter were matched against the strength and ferocity of the first." Pompey let loose six hundred lions in the arena in one day; Augustus delighted the people with four hundred and twenty panthers. The games of Trajan lasted one hundred and twenty days, when ten thousand gladiators fought, and ten thousand beasts were slain. Titus slaughtered five thousand animals at a time; twenty elephants contended, according to Pliny, against a band of six hundred captives. Probus reserved six hundred gladiators for one of his festivals, and slaughtered on another two hundred lions, twenty leopards, and three hundred bears; Gordian let loose three hundred African hyenas and ten Indian tigers in the arena. Every corner of the earth was ransacked for these wild animals, which were so highly valued that in the time of Theodosius it was forbidden by law to destroy a Getulian lion. No one can contemplate the statue of the Dying Gladiator which now ornaments the capitol at Rome, without emotions of pity and admiration. If a marble statue can thus move us, what was it to see the Christian gladiators contending with the fierce

lions of Africa! "The Christians to the lions!" was the cry of the brutal populace. What a sight was the old amphitheatre of Titus, five hundred and sixty feet long and four hundred and seventy feet wide, built on eighty arches and rising one hundred and forty feet into the air, with its four successive orders of architecture, and enclosing its eighty thousand seated spectators, arranged according to rank, from the Emperor to the lowest of the populace, all seated on marble benches covered with cushions, and protected from the sun and rain by ample canopies! What an excitement, when men strove not with wild beasts alone, but with one another; and when all that human skill and strength, increased by elaborate treatment, and taxed to the uttermost, were put forth in needless slaughter, until the thirsty soil was wet and saturated with human gore! Familiarity with such sights must have hardened the heart and rendered the mind insensible to refined pleasures. What theatres are to the French, what bull-fights are to the Spaniards, what horse-races are to the English, these gladiatorial shows were to the ancient Romans. The ruins of hundreds of amphitheatres attest the universality of the custom, not in Rome alone, but in the provinces.

Probably no people abandoned themselves to pleasures more universally than the Romans, after war had ceased to be their master passion. All classes alike

pursued them with restless eagerness. Amusements were the fashion and the business of life. At the theatre, at the great gladiatorial shows, at the chariot races, emperors and senators and generals were always present in conspicuous and reserved seats of honor; behind them were the patricians, and then the ordinary citizens, and in the rear of these the people fed at the public expense. The Circus Maximus, the Theatre of Pompey, the Amphitheatre of Titus, would collectively accommodate over four hundred thousand spectators. We may presume that over five hundred thousand persons were in the habit of constant attendance on these demoralizing sports; and the fashion spread throughout all the great cities of the empire, so that there was scarcely a city of twenty thousand inhabitants which had not its theatres, amphitheatres, or circus. And when we remember the heavy bets on favorite horses, and the universal passion for gambling in every shape, we can form some idea of the effect of these amusements on the common mind,—destroying the taste for home pleasures, and for all that was intellectual and simple

What are we to think of a state of society where all classes had continual leisure for these sports! Habits of industry were destroyed, and all respect for employments that required labor. The rich were supported by contributions from the provinces, since they were

the great proprietors of conquered lands; the poor had no solicitude for a living, since they were supported at the public expense. All therefore gave themselves up to pleasure. Even the baths, designed for sanatory purposes, became places of resort and idleness, and ultimately of intrigue and vice. In the time of Julius Cæsar we find no less a personage than the mother of Augustus making use of the public establishments; and in process of time the Emperors themselves bathed in public with the meanest of their subjects. The baths in the time of Alexander Severus were not only kept open from sunrise to sunset, but even during the whole night. The luxurious classes almost lived in the baths. Commodus took his meals in the bath. Gordian bathed seven times in the day, and Gallienus as often. They bathed before they took their meals, and after meals to provoke a new appetite; they did not content themselves with a single bath, but went through a course of baths in succession, in which the agency of air as well as of water was applied; and the bathers were attended by an army of slaves given over to every sort of roguery and theft. Nor were water and air baths alone used; the people made use of scented oils to anoint their persons, and perfumed the water itself with the most precious essences. Bodily health and cleanliness were only secondary considerations;

voluptuous pleasure was the main object. The ruins of the baths of Titus, Caracalla, and Diocletian in Rome show that they were decorated with prodigal magnificence, and with everything that could excite the passions, — pictures, statues, ornaments, and mirrors. The baths were scenes of orgies consecrated to Bacchus, and the frescos on the excavated baths of Pompeii still raise a blush on the face of every spectator who visits them. I speak not of the elaborate ornaments, the Numidian marbles, the precious stones, the exquisite sculptures that formed part of the decorations of the Roman baths, but of the demoralizing pleasures with which they were connected, and which they tended to promote. The baths ultimately became, according to the ancient writers, places of excessive and degrading debauchery.

“*Balnea, vina, Venus corrumpunt corpora nostra.*”

If it were possible to allude to an evil more revolting than the sports of the amphitheatre and circus, or the extravagant luxuries of the table, I would say that the universal abandonment to money-making, for the enjoyment of the factitious pleasures it purchased, was even still more melancholy, since it struck deeper into the foundations which supported society. The leading spring of life was money. Boys were bred from early youth to all the mysteries of unscrupulous gains.

Usury was practised to such an incredible extent that the interest on loans in some instances equalled, in a few months, the whole capital; this was the more aristocratic mode of making money, which not even senators disdained. The pages of the poets show how profoundly money was prized, and how miserable were people without it. Rich old bachelors, without heirs, were held in the supremest honor. Money was the first object in all matrimonial alliances; and provided that women were only wealthy, neither bridegroom nor parent was fastidious as to age, or deformity, or meanness of family, or vulgarity of person. The needy descendants of the old patricians yoked themselves with fortunate plebeians, and the blooming maidens of a comfortable obscurity sold themselves, without shame or reluctance, to the bloated sensualists who could give them what they supremely valued,—chariots and diamonds. The giddy women in love with ornaments and dress, and the godless men seeking what they should eat, could only be satisfied with what purchased their pleasures. The haughtiest aristocracy ever known on earth, tracing their lineage to the times of Cato and boasting of their descent from the Scipios and the Pompeys, accustomed themselves at last to regard money as the only test of their own social position. The great Augustine found himself utterly neglected at Rome because of his poverty,—being dependent

on his pupils, and they being mean enough to run away without paying him. Literature languished and died, since it brought neither honor nor emolument. No dignitary was respected for his office, only for his gains; nor was any office prized which did not bring rich emoluments. Corruption was so universal that an official in an important post was sure of making a fortune in a short time. With such an idolatry of money, all trades and professions which were not favorable to its accumulation fell into disrepute, while those who administered to the pleasures of a rich man were held in honor. Cooks, buffoons, and dancers received the consideration which artists and philosophers enjoyed at Athens in the days of Pericles. But artists and scholars were very few indeed in the more degenerate days of the empire; nor would they have had influence. The wit of a Petronius, the ridicule of a Martial, the bitter sarcasm of a Juvenal were lost on a people abandoned to frivolous gossip and demoralizing excesses. The haughty scorn with which a sensual beauty, living on the smiles and purse of a fortunate glutton, would pass in her gilded chariot some of the impoverished descendants of the great Camillus might have provoked a smile, had any one been found, even a neglected poet, to give them countenance and sympathy. But, alas! everybody worshipped at the shrine of Mammon; every-

body was valued for what he *had*, rather than for what he *was*; and life was prized, not for those pleasures which are cheap and free as heaven, not for quiet tastes and rich affections and generous sympathies, — the glorious certitudes of love, esteem, and friendship, which, “be they what they may, are yet the fountain-life of all our day,” — but for the gratification of depraved and expensive tastes, of those short-lived enjoyments which ended with the decay of appetite and the *ennui* of realized expectation, — all of the earth, earthy; making a wreck of the divine image which was made for God and heaven, preparing the way for a most fearful retribution, and producing on contemplative minds a sadness allied with despair, driving them to caves and solitudes, and making death the relief from sorrow.

The fourteenth satire of Juvenal is directed mainly to the universal passion for gain and the demoralizing vices it brings in its train, which made Rome a Vanity Fair and even a Pandemonium.

The old Greek philosophers gloried in their poverty; but poverty was the greatest reproach to a Roman. “In exact proportion to the sum of money a man keeps in his chest,” says Juvenal, “is the credit given to his oath. And the first question ever asked of a man is in reference to his income, rather than his character. How many slaves does he keep; how many acres

does he own; what dishes are his table spread with?—these are the universal inquiries. Poverty, bitter though it be, has no sharper sting than this,—that it makes men ridiculous. Who was ever allowed at Rome to become a son-in-law, if his estate was inferior? What poor man's name appears in any will?"

And with this reproach of poverty there were no means to escape from it. Nor was there alleviation. A man was regarded as a fool who gave anything except to the rich. Charity and benevolence were unknown virtues. The sick and the miserable were left to die unlamented and unknown. Prosperity and success, no matter by what means they were purchased, secured reverence and influence.

Such was imperial Rome, in all the internal relations of life, and amid all the trophies and praises which resulted from universal conquest, — a sad, gloomy, dismal picture, which fills us with disgust as well as melancholy. If any one deems it an exaggeration, he has only to read Saint Paul's first chapter in his epistle to the Romans. I cannot understand the enthusiasm of Gibbon for such a people, or for such an empire, — a grinding and resistless imperial despotism, a sensual and proud aristocracy, a debased and ignorant populace, enormously disproportionate conditions of fortune, slavery flourishing to a state unprece-

dented in the world's history, women the victims and the toys of men, lax sentiments of public and private morality, a whole people given over to demoralizing sports and spectacles, pleasure the master passion of the people, money the mainspring of society, a universal indulgence in all the vices which lead to violence and prepare the way for the total eclipse of the glory of man. Of what value was the cultivation of Nature, or a splendid material civilization, or great armies, or an unrivalled jurisprudence, or the triumph of energy and skill, when the moral health was completely undermined? A world therefore as fair and glorious as our own must needs crumble away. There were no powerful conservative forces; the poison had descended to the extremities of the social system. A corrupt body must die when vitality has fled. The soul was gone; principle, patriotism, virtue, had all passed away. The barbarians were advancing to conquer and desolate; there was no power to resist them but enervated and timid legions, with the accumulated vices of all the nations of the earth, which they had been learning for four hundred years. Society must needs resolve itself into its original elements when men would not make sacrifices, and so few belonged to their country. The machine was sure to break up at the first great shock. No State could stand with such an accumulation of wrongs, with

such complicated and fatal diseases eating out the vitals of the empire. No form of civilization however brilliant and lauded, could arrest decay and ruin when public and private virtue had fled. The house was built upon the sand.

The army might rally under able generals, in view of the approaching catastrophe ; philosophy might console the days of a few indignant citizens ; good Emperors might attempt to raise barriers against corruption, — still, nothing, according to natural laws, could save the empire. Even Christianity could not arrest the ruin. It had converted thousands, and had sowed the seeds of future and better civilizations. It was sent, however, not to save a decayed and demoralized empire, but the world itself. Not until the Germanic barbarians, with their nobler elements of character, had taken possession of the seats of the old civilization, were the real triumphs of Christianity seen. Had the Roman empire continued longer, Christianity might have become still more corrupted ; in the prevailing degeneracy it certainly could not save what was not worth preserving. The strong grasp which Rome had laid upon the splendors of all the ancient Pagan Civilizations was to be relaxed. Antiquity had lived out its life. The empire of the Cæsars was doomed. Retributive justice must march on in its majestic course. The empire had accomplished its mission the time came

for it to die. The Sibylline oracle must needs be fulfilled: "O haughty Rome, the divine chastisement shall come upon thee; fire shall consume thee; thy wealth shall perish; foxes and wolves shall dwell among thy ruins: and then what land that thou hast enslaved shall be thy ally, and which of thy gods shall save thee? For there shall be confusion over the face of the whole earth, and the fall of cities shall come."

AUTHORITIES.

MR. MERIVALE has written fully on the condition of the empire. Gibbon has occasional paragraphs which show the condition of Roman society. Lyman's *Life of the Emperors* should be read, and also DeQuincey's *Lives of the Cæsars*. See also Niebuhr, Arnold, Mommsen, and Curtius, though these writers have chiefly confined themselves to republican Rome. But if one would get the truest and most vivid description, he must read the Roman poets, especially Juvenal and Martial. The work of Petronius is too indecent to be read. Ammianus Marcellinus gives us some striking pictures of the later Romans. Suetonius, in his *Lives of the Cæsars*, furnishes many facts. Becker's *Gallus* is a fine description of Roman habits and customs. Lucian does not describe Roman manners, but he aims his sarcasm at the hollowness of Roman life, as do the great satirists generally. These can all be had in translations.

ALEXANDER THE GREAT

356-323 B. C.

ALEXANDER THE GREAT.

THE WARRIOR.

ALEXANDER, called THE GREAT, son of Philip of Macedon, and of Olympias of Epirus his wife, was born in the autumn of 356 B.C. Neither he nor his father was a Greek in character, both having the self-will of barbarian princes. Both were, however, partially imbued with Grecian sentiment and intelligence. Alexander's first tutor was a Greek, Lysimachus, and the first thing which the child learned was Homer's Iliad. At the age of thirteen, he received further instruction from Aristotle, and enjoyed this teaching for three years, being then warmly attached to that philosopher. His interest in Greek heroic and tragic poetry lasted through his whole life, and survived his personal affection for Aristotle. During his father's lifetime he shared in his wars, and in the government of the kingdom, early showing a strong will, and an imperious temper. He mounted the throne at the age of twenty, his father

having been murdered, and it is supposed by some that the son was partially acquainted with the conspiracy. Alexander at the start put to death several of the conspirators, as well as many relations of his father's second wife, and soon after Philip's infant son was killed by his order.

At the head of an army he at once entered Greece, strengthened the submission of the Greek republics, and at a general Grecian assembly at Corinth, was made commander-in-chief, with full powers on land and sea to prosecute the war against Persia. In the following spring in an armed excursion against various tribes of Thracians, and others north of Macedonia, he crossed the Danube with his army without a bridge in the face of an enemy. During this campaign rumors of his death arose in Greece. Demosthenes and the patriots of other Greek cities, and above all the Thebans, considered this to be a propitious moment to emancipate Hellas from Macedonian domination. The Thebans rose in arms. Alexander with matchless celerity returned with his army in thirteen days from beyond the north of Macedonia to Bœotia. After a murderous storm, he took Thebes, razed that ancient and legendary Grecian city to the ground, leaving only the house of Pindar standing, and sparing the descendants of the poet from being sold into slavery, which was the fate of all the other

Thebans. This blow crushed the aspirations of the Greeks for freedom.

Alexander now completed his preparations for the invasion of Asia. In March or April, 334 B.C., he crossed the Hellespont from Sestos to Abydos, with a force of between 30,000 and 40,000 foot, and 4,500 horse. This army was composed principally of Macedonians, with Macedonian commanders, and had not a spark of genuine Greek feeling in it. In full armor, like Protesilaus, the hero of the Homeric legend, Alexander was the first to tread the Asiatic shore. At Ilium (Troy) he performed various rites and sacrifices in honor of the ancient heroes, a manifestation of that legendary sympathy which formed the only real relation between him and the Greeks. A powerful Persian force defended the passage of the Granicus. Alexander was the first to enter the river at the head of his army, and fought foremost with great personal courage. He won a decisive and terror-striking victory.

Nearly the whole of Asia Minor submitted to him, and the few cities that attempted to resist were taken by storm. At Tarsus in Cilicia he was seized with a violent fever, after bathing in the chilly waters of Cydnus, and owed his recovery to the skill of his physician, Philip. Darius, commanding in person an army of 600,000 footmen, met him on the banks of

the Issus, and one of the most important and decisive battles recorded in history was fought there. Darius was defeated with immense slaughter and the loss of his camp and treasures; while his mother, his wife Statira, the handsomest woman in Asia, his infant son and two daughters, fell into the hands of the victor. Syria, Palestine, and Phœnicia submitted, with the exception of Tyre, which was taken after a siege which the desperate defence of the Tyrians prolonged for seven months. Alexander was twice obliged to construct a solid mole more than 200 feet wide, across the half mile channel between the mainland and the islet on which Tyre was situated. At the final storm the carnage was terrible; and then 2,000 prisoners were hung on the walls, 30,000 inhabitants sold into slavery, and the ancient and free-spirited population wholly extirpated.

Alexander now marched toward Egypt. Only the city of Gaza, commanded by Batis, a eunuch, resisted him. The town had hitherto been thought impregnable, but Alexander surrounded it with artificial mounds equal in elevation to the hill on which the stronghold was situated, and after having been beaten off in several attacks, in one of which he was severely wounded, took the city, and slaughtered nearly the whole population. Batis, covered with wounds, was taken prisoner. The infuriated victor ordered his feet

to be bored, and his living body to be attached to a chariot, which he drove himself in full speed through the streets. Thus he copied the ignominious treatment which, according to the legend, was inflicted by Achilles on the dead body of Hector. Egypt submitted without offering the slightest resistance. Alexander founded the celebrated city of Alexandria, and marched through the sandy desert into Libya to the temple of Jupiter Ammon. The priest addressed him as the son of the god. In his self-adoration, Alexander henceforth believed such to be his parentage, to the great dissatisfaction of his Macedonian army and companions, who were highly incensed at this insolence and disregard for the memory of his father, Philip.

Alexander was now master of the whole eastern Mediterranean coast, and of all the islands, and returned to Asia in search of Darius, who was lost in the immense dominions which still remained to him. Alexander crossed the Euphrates and Tigris, and in the plains of Arbela, in Syria, reached the Persian army, made up of the contingents from the Caspian Sea, the rivers Oxus and Indus, the Persian gulf, and the Red Sea. It is said that this army numbered 1,000,000 of infantry, 40,000 cavalry, 200 chariots armed with scythes, and 15 elephants, their first appearance on a field of battle

west of their native country. Alexander commanded 40,000 foot and 7,000 horse. The battle was severely contested, but at last the Persians were utterly routed. The Persian Empire was destroyed. Its two capitals, Babylon and Susa, surrendered, with their treasures, about \$60,000,000 in gold and silver, accumulated there by the Persian kings. From Susa Alexander marched into Persis proper, the cradle of the earlier Persian conquerors, overpowering various barbarian mountain tribes on the march. Persepolis and Pasargada, the two capitals of the Persian race, fell into his hands. The treasure found there amounted to \$100,000,000. He set fire to Persepolis, the male inhabitants were slain, the females dragged into servitude. Next he continued the conquest of the eastern part of the Persian Empire, following the flying Darius into Media and Hyrcania. While approaching the southeastern side of the Caspian sea, he learned that Darius had been murdered by his revolted satraps. Alexander ordered the body to be buried with regal pomp in the royal sepulchres of Persis. Pursuing the satraps across Parthia he entered Aria, in the region adjoining the modern Herat. Thence he marched into Drangiana, the modern Seiestan. While at the chief town of this province, on the plea of a conspiracy against his life discovered among those nearest his person, he con-

demned to death Philotas, one of his first generals, and son of Parmenio, his best captain, and the companion in arms of his father, Philip; and after this he ordered the murder of Parmenio himself. He had now fallen into habits of the utmost intemperance, and full of suspicion like all tyrants, he opened the letters written by his officers and soldiers to their relations in Europe. He reduced Gedrosia, Arachosia, and the Paropamisadæ, modern Afghanistan, and the western part of Cabool — founding various cities of Greeks and Macedonians. Then he overran Bactria, crossed the Oxus, marched to Sogdiana, passing through the principal city Maracanda, now Samarcand, and reached the river Jaxartes, which he thought was the Tanaïs (Don), then considered to be the boundary between Europe and Asia. On its banks he founded a city named Alexandria, as a fortress against the nomadic Scythians, in whose pursuit he reached the present khanat of Kokand. This was the utmost limit of Alexander's northern progress.

During his stay at Samarcand, on his return, in a drunken orgy, he killed with his own hand his general, Clitus, who had saved his life at the battle of the Granicus. The impulse for this crime was given by Clitus, who rebuked Alexander for his overbearing pride and infatuated belief in his divine

origin. After this bloody deed the murderer, seized with remorse, passed three days without food and drink. In Bactra (Balkh), the capital of Bactria, he celebrated an oriental marriage between himself and his captive Roxana, and in the festivities of this ceremony demanded prostration and worship from the Greeks as well as the Asiatics. Some Greek philosophers, and Anaxarchus among them, led the way in this degradation, but Callisthenes, the friend and correspondent of Aristotle, opposed it. This person was falsely accused of a conspiracy, tortured, and put to death by order of Alexander, who was now burning with hate against every manifestation of an independent spirit, even involving in this animosity Aristotle, who fortunately was at Athens.

From Bactra, Alexander marched southward to the mountain range of Paropamisus, or Caucasus, now known as the Hindoo Koosh, and went into Cabool, descending along the right bank of the Indus, and reducing various mountain tribes on the way. In the early spring, 326 B.C., he crossed the Indus at or near Attock, a passage now much used. He entered Taxila, whose prince, Taxilus, at once submitted, becoming a tributary ally, and furnishing a contingent to the Macedonian army. Alexander marched to the river Hydaspes (Jelum), and on its farther side met the Indian prince Porus, with a

formidable force, which he defeated in a sanguinary battle, taking Porus prisoner. The latter, however, had his possessions restored and became an ally and friend of Alexander.

After conquering various Indian princes and nations, Alexander passed the river Acesines, and advancing across the Punjaub to the river Hydraotes, or Ravee, took the city of Sangala by storm and demolished it, putting to death 17,000 persons, and making 70,000 captives from various free Indian tribes. Thence he marched to the river Hyphasis (Sutlej). Here for the first time the Macedonians of the army, wearied by the uninterrupted hardships, and averse to plunging further in unknown deserts and regions, refused to cross the river. The troops resisted his entreaties, and Alexander gave the order to return. To mark the limit of his eastward progress, Alexander erected twelve altars of extraordinary height on the western bank of the Hyphasis. He embarked with a part of his army on the Hydaspes, and sailed down to the confluence of this river with the Indus, which he descended to its junction with the Indian Ocean, disembarking perpetually to attack, subdue, and slaughter the tribes near the shore. Nearchus, his admiral, took the fleet from the mouth of the Indus round the Persian gulf to that of the Tigris, while Alexander

himself marched westward along the shores of the gulf, then through the desert of Gedrosia to the city of Pura (Bahnpoorah). In this march the army underwent much suffering from want of food and water in the trackless sands. To compensate for this, and in imitation of the festivals of Dionysus, Alexander and his army marched seven days in drunken, bacchanalian procession through Carmania (Kerman), entering Persis, and finally reaching Susa. Here he plunged more and more into Eastern habits, showing an all-absorbing love of servility, adopting the Persian costume and ceremonial, making a eunuch Bagoas his favorite, and contracting an Asiatic marriage with two additional wives. He sailed down the river Pasitigris (Karoön) to the Persian gulf, and entered the mouth of the Tigris. He wished for naval glory, projected the circumnavigation and conquest of Arabia, and devoted his indomitable energy to the construction of an immense fleet in the Phœnician ports. After the vessels were built, they were taken to pieces, and conveyed on the Euphrates to Babylon, which was transformed into a harbor for the purpose, where other ships were built. At this time he received embassies from all the nations around the Mediterranean, from the Iberians, Scythians, Gauls, and even from the Romans, who then were of no great importance. After

arriving at Babylon, he spent several days in surveying the surrounding marshes, where he contracted the germs of a violent fever. This malady was developed and heightened by his daily revelries, and after a few days he died in the afternoon of a day of June, 323 B.C., after a life of thirty-two years and eight months and a reign of twelve years and eight months.

His reign and epoch form one of the pivots of the world's history. By it Asia and the East were interwoven with Europe and Greece, while the free Greek communities were crushed and democratic progress and liberty entombed. Alexander's career was not that of a great ruler and statesman, but rather of a general and soldier. His generalship, his knowledge of command, his strategic combinations, his far-reaching plans for prosecuting campaigns, his constant foresight and fertility in difficulties, his rapidity of movement, are almost without a parallel in history, when we consider the time, the regions where he acted, and the resources at his disposal. With all his exuberant courage and his sanguine temperament, nothing was ever omitted in the way of systematic military precaution. But all his great qualities were useful only against enemies, and in this category we must reckon all mankind, known or unknown, except those who submitted to him. His voracious appetite for con-

quest was unabated to his death. But he had no grand and beneficent views on the subject of government, and no intentions for the improvement of mankind. The acquisition of universal dominion was the master-passion of his soul. As a conqueror he was neither Macedonian nor Greek. He had no attachment for any special nationality, but looked on all mankind as on his subjects.

The Macedonians used the Greek language and one of the indirect and beneficent results of the devastating wars of Alexander was to sow the seeds of Greek culture and civilization in Egypt, central Asia, Persia, and western India, although that was no part of his ambition. On visiting Diogenes at Corinth it is related that Alexander asked if he could do anything to oblige him; "Yes," replied Diogenes, "stand from between me and the sun." Was this audacious reply by the Cynic Philosopher a gentle hint that Alexander, at the height of his fame, was already the darkest shadow over the greatest of empires?

Nearly a century before the Christian era the vast empire crumbled and passed under Roman rule. That which survived and became a rich legacy to the modern world was the learning, the finished oratory, and matchless philosophy of its master minds. The age of Alexander is crowded with great names: Demosthenes, Lycurgus, Hyperides, Eschines, Pho-

cion, Aristotle, and the immortal Plato, who, as Emerson said, "has answered all our questions." Plato's later days were quietly devoted to teaching in the garden of Academos at Athens. Like Socrates he found that in the long run the world is ruled by ideas, not by forms of government, by military prowess, not by the accumulation of wealth. So he explored the highest realms of thought and left dissertations that will receive academic discussion for ages yet to come.

HANNIBAL

A CENTURY after Alexander another genius arose in commercial Carthage, in the person of Hannibal, who at the early age of nine took the oath of eternal enmity to Rome, a vow faithfully kept to the day of his death. He exhibited the ardor and boldness of youth with the discretion of age; he had the taciturnity of Grant, yet possessed rare powers of eloquence, an oriental passion with a keen analytic mind; he was a model of chastity; he could be patient and prudent, able to conquer by strategy or by terror. When powerful enemies at home secured his removal from military command he quickly rose in civil councils, detecting abuses, reorganizing finances and restoring prosperity like our modern captains of industry. After conquering Spain he twice defeated Scipio in Italy. With an untrained force he fought veterans and for six years defied and endangered the supremacy of the Roman Empire. But Carthage was

lacking in national ideals and patriotism; it was given over to the love and lust of wealth; it gave only feeble and fitful support to those, like Hannibal, who strove to make it a nation. In 201 B.C. Carthage passed under the rule of its old enemy and became a Roman province, followed in 146 B.C. by Macedonia.

Speaking at the "Hall of Fame," the late Mr. Curtis Guild, Jr., thus summed up the character of this ancient empire:

Twenty-one centuries ago a struggling little republic of Italy faced Carthage, perhaps the most nearly perfect government framed for material development that ever existed. It was a government of business men. Only merchant princes might aspire to the governing assembly. The masses of the people were taught nothing except to toil, and they did toil. Except for the services of the Sacred Band, so-called, a bare brigade, the wars of Carthage were fought by foreign mercenaries hired for the purpose, by Greeks and Gauls and Iberians and Libyans. They needed no poets to celebrate their victories. To the free companies of ancient Africa as of mediæval France or Italy plunder was more attractive than Greek pæan or Roman triumph. The only literature that inspired the hired soldiers of Carthage was the inscription on the hard coin they pouched as pay. Business success, immediate or ancestral, was the

golden key — the only key to government position. Materially, Carthage was splendidly successful. Without an orator, a poet, a historian, an educator, Carthage extended her dominion from Egypt to the Atlantic. Her merchantmen swept from the Levant to the Pillars of Hercules and beyond. North her ships sailed across the Bay of Biscay to the tin mines of Cornwall, south along the coast of Africa to its uttermost cape, centuries before Prince Henry the Navigator or Vasco da Gama were born, tens of centuries before the American explorer, Paul du Chaillu, had rediscovered along the Gaboon River the great apes that still bear the ancient Punic name gorilla. Westward there is now good reason to believe that not the Canaries merely but Yucatan were visited by these adventurous Phœnician sailors beside whose voyages the wild sea stories of the Vikings themselves seem but the chronicle of summer cruising.

They produced great statesmen. They produced great generals who to a nicety mingled and manœuvered Balearic slingers, skirmishers from Gaul, spearmen from Greece, swordsmen from Spain, wild desert cavalry from the Sahara, and war elephants from India.

Not even the army of Xerxes himself showed a more wonderful variety of material. No general in any age or time has ever surpassed, many soldiers be-

lieve that none have ever equalled, the military attainment of the master mind of Hannibal.

Yet what did the Phœnician people, what did Carthage accomplish for the world? What did they do to make humanity the better or the happier for their existence? They discovered a purple dye whose secret is forgotten and they invented an alphabet for commercial purposes which only became the vehicle of literature and poetry and thought when another race had recognized its possibilities.

Tyre and Sidon live in the mouths of men but as historic memories of ineffable vice; Carthage is known only in so far as her enemies have told her story. The boundaries of her domain are unknown. Her discoveries had to be made anew before they could benefit posterity. Her triumphs have left not a mark on the history of civilization. The traces even of her language have vanished almost as utterly as her battlements and palaces.

The Rome even of Fabius and Scipio was not as well equipped as Carthage in military leadership. It was notoriously weak in diplomats. The race that then and since then supplied its inhabitants has not always succeeded. It has often failed, yet it endures. Italy has clung to ideals suppressed but never forgotten and the ancient Roman law lives in the jurisprudence of the world.

BEACON LIGHTS OF HISTORY.

CYRUS THE GREAT.

ASIATIC SUPREMACY.

ONE of the most prominent and romantic characters in the history of the Oriental world, before its conquest by Alexander of Macedon, is Cyrus the Great; not as a sage or prophet, not as the founder of new religious systems, not even as a law-giver, but as the founder and organizer of the greatest empire the world has seen, next to that of the Romans. The territory over which Cyrus bore rule extended nearly three thousand miles from east to west, and fifteen hundred miles from north to south, embracing the principal nations known to antiquity, so that he was really a king of kings. He was practically the last of the great Asiatic emperors, absorbing in his dominions those acquired by the Assyrians, the Babylonians, and the Lydians. He was also the first who brought Asia into intimate contact with Europe and its influences,

and thus may be regarded as the link between the old Oriental world and the Greek civilization.

It is to be regretted that so little is really known of the Persian hero, both in the matter of events and also of exact dates, since chronologists differ, and can only approximate to the truth in their calculations. In this lecture, which is in some respects an introduction to those that will follow on the heroes and sages of Greek, Roman, and Christian antiquity, it is of more importance to present Oriental countries and institutions than any particular character, interesting as he may be,—especially since as to biography one is obliged to sift historical facts from a great mass of fables and speculations.

Neither Herodotus, Xenophon, nor Ctesias satisfy us as to the real life and character of Cyrus. This renowned name represents, however, the Persian power, the last of the great monarchies that ruled the Oriental world until its conquest by the Greeks. Persia came suddenly into prominence in the middle of the seventh century before Christ. Prior to this time it was comparatively unknown and unimportant, and was one of the dependent provinces of Media, whose religion, language, and customs were not very dissimilar to its own.

Persia was a small, rocky, hilly, arid country about three hundred miles long by two hundred and fifty

wide, situated south of Media, having the Persian Gulf as its southern boundary, the Zagros Mountains on the west separating it from Babylonia, and a great and almost impassable desert on the east, so that it was easily defended. Its population was composed of hardy, warlike, and religious people, condemned to poverty and incessant toil by the difficulty of getting a living on sterile and unproductive hills, except in a few favored localities. The climate was warm in summer and cold in winter, but on the whole more temperate than might be supposed from a region situated so near the tropics,—between the twenty-fifth and thirtieth degrees of latitude. It was an elevated country, more than three thousand feet above the sea, and was favorable to the cultivation of the fruits and flowers that have ever been most prized, those cereals which constitute the ordinary food of man growing in abundance if sufficient labor were spent on their cultivation, reminding us of Switzerland and New England. But vigilance and incessant toil were necessary, such as are only found among a hardy and courageous peasantry, turning easily from agricultural labors to the fatigues and dangers of war. The real wealth of the country was in the flocks and herds that browsed in the valleys and plains. Game of all kinds was abundant, so that the people were unusually fond of the pleasures of the chase; and as they were temperate.

inured to exposure, frugal, and adventurous, they made excellent soldiers. Nor did they ever as a nation lose their warlike qualities,—it being only the rich and powerful among them who learned the vices of the nations they subdued, and became addicted to luxury, indolence, and self-indulgence. Before the conquest of Media the whole nation was distinguished for temperance, frugality, and bravery. According to Herodotus, the Persians were especially instructed in three things,—“to ride, to draw the bow, and to speak the truth.” Their moral virtues were as conspicuous as their warlike qualities. They were so poor that their ordinary dress was of leather. They could boast of no large city, like the Median Ecbatana, or like Babylon,—Pasargadaë their ancient capital, being comparatively small and deficient in architectural monuments. The people lived chiefly in villages and hamlets, and were governed, like the Israelites under the Judges, by independent chieftains, none of whom attained the rank and power of kings until about one hundred years before the birth of Cyrus. These pastoral and hunting people, frugal from necessity, brave from exposure, industrious from the difficulty of subsisting in a dry and barren country, for the most sort were just such a race as furnished a noble material for the foundation of a great empire.

Whence came this honest, truthful, thrifty race? It

is generally admitted that it was a branch of the great Aryan family, whose original settlements are supposed to have been on the high table-lands of Central Asia east of the Caspian Sea, probably in Bactria. They emigrated from that dreary and inhospitable country after Zoroaster had proclaimed his doctrines, after the sacred hymns called the Gathas were sung, perhaps even after the Zend-Avesta or sacred writings of the Zoroastrian priests had been begun, — conquering or driving away Turanian tribes, and migrating to the southwest in search of more fruitful fields and fertile valleys, they found a region which has ever since borne a name — Iran — that evidently commemorated the proud title of the Aryan race. And this great movement took place about the time that another branch of their race also migrated southeastwardly to the valleys of the Indus. The Persians and the Hindus therefore had common ancestors, — the same indeed, as those of the Greeks, Romans, Slavonians, Celts, and Teutons, who migrated to the northwest and settled in Europe. The Aryans in all their branches were the noblest of the primitive races, and have in their later developments produced the highest civilization ever attained. They all had similar elements of character, especially love of personal independence, respect for woman, and a religious tendency of mind. We see a considerable similarity of habits

and customs between the Teutonic races of Germany and Scandinavia and the early inhabitants of Persia, as well as great affinity in language. All branches of the Aryan family have been warlike and adventurous, if we may except the Hindus, who were subjected to different influences,—especially of climate, which enervated their bodies if it did not weaken their minds.

When the migration of the Iranians took place it is difficult to determine, but probably between fifteen hundred and two thousand years before our era, although it may have been even five hundred years earlier than that. All theories as to their movements before their authentic history begins are based on conjecture and speculation, which it is not profitable to pursue, since we can settle nothing in the present state of our knowledge.

It is very singular that the Iranians should have had, after their migrations and settlements, religious ideas and systems so different from those of the Hindus, considering that they had common ancestors. The Iranians, including the Medes as well as Persians, accepted Zoroaster as their prophet and teacher, and the Zend-Avesta as their sacred books, and worshipped one Supreme Deity, whom they called Ahura-Mazda (Ormazd),—the Lord Omniscient,—and thus were monotheists; while the Hindus were practically poly-

theists, governed by a sacerdotal caste, who imposed gloomy austerities and sacrifices, although it would seem that the older Vedistic hymns of the Hindus were theistic in spirit. The Magi — the priests of the Iranians — differed widely in their religious views from the Brahmans, inculcating a higher morality and a loftier theological creed, worshipping the Supreme Being without temples or shrines or images, although their religion ultimately degenerated into a worship of the powers of Nature, as the recognition of Mithra the sun-god and the mysterious fire-altars would seem to indicate. But even in spite of the corruptions introduced by the Magi when they became a powerful sacerdotal body, their doctrine remained purer and more elevated than the religions of the surrounding nations.

While the Iranians worshipped a supreme deity of goodness, they also recognized a supreme deity of evil, both ruling the world — in perpetual conflict — by unnumbered angels, good and evil; but the final triumph of the good was a conspicuous article of their faith. In close logical connection with this recognition of a supreme power in the universe was the belief of a future state and of future rewards and punishments, without which belief there can be, in my opinion, no high morality, as men are constituted.

In process of time the priests of the Zoroastrian faith became unduly powerful, and enslaved the people by

many superstitions, such as the multiplication of rites and ceremonies and the interpretation of dreams and omens. They united spiritual with temporal authority, as a powerful priesthood is apt to do,—a fact which the Christian priesthood of the Middle Ages made evident in the Occidental world.

In the time of Cyrus the Magi had become a sort of sacerdotal caste. They were the trusted ministers of kings, and exercised a controlling influence over the people. They assumed a stately air, wore white and flowing robes, and were adepts in the arts of sorcery and magic. They were even consulted by kings and chieftains, as if they possessed prophetic power. They were a picturesque body of men, with their mystic wands, their impressive robes, their tall caps, appealing by their long incantations and frequent ceremonies and prayers to the eye and to the ear. “Pure Zoroastrianism was too spiritual to coalesce readily with Oriental luxury and magnificence when the Persians were rulers of a vast empire, but Magism furnished a hierarchy to support the throne and add splendor and dignity to the court, while it blended easily with previous creeds.”

In material civilization the Medes and Persians were inferior to the Babylonians and Egyptians, and immeasurably behind the Greeks and Romans. Their architecture was not so imposing as that of the Egyptians and Babylonians; it had no striking originality, and it

was only in the palaces of great monarchs that anything approached magnificence. Still, there were famous palaces at Ecbatana, Susa, and Persepolis, raised on lofty platforms, reached by grand staircases, and ornamented with elaborate pillars. The most splendid of these were erected after the time of Cyrus, by Darius and Xerxes, decorated with carpets, hangings, and golden ornaments. The halls of their palaces were of great size and imposing effect. Next to palaces, the most remarkable buildings were the tombs of kings; but we have no remains of marble statues or metal castings or ivory carvings, not even of potteries, which at that time in other countries were common and beautiful. The gems and signet rings which the Persians engraved possessed much merit, and on them were wrought with great skill the figures of men and animals; but the nearest approach to sculpture were the figures of colossal bulls set to guard the portals of palaces, and these were probably borrowed from the Assyrians.

Nor were the Persians celebrated for their textile fabrics and dyes. "So long as the carpets of Babylon, the shawls of India, the fine linen of Egypt, and the coverlets of Damascus poured continually into Persia in the way of tribute and gifts, there was no stimulus to manufacture." The same may be said of the ornamental metal-work of the Greeks, and the glass manufacture of the Phœnicians. The Persians were soldiers,

and gloried in being so, to the disdain of much that civilization has ever valued.

It may as well be here said that the Iranians, both Medes and Persians, were acquainted with the art of writing. Harpagus sent a letter to Cyrus concealed in the belly of a hare, and Darius signed a decree which his nobles presented to him in writing. In common with the Babylonians they used the same alphabetic system, though their languages were unlike, — namely, the cuneiform or arrow-head or wedge-shaped characters, as seen in the celebrated inscriptions of Darius on the side of a high rock thirty feet from the ground. We cannot determine whether the Medes and Persians brought their alphabet from their original settlements in Central Asia, or derived it from the Turanian and Semitic nations with which they came in contact. In spite of their knowledge of writing, however, they produced no literature of any account, and of science they were completely ignorant. They made few improvements even in military weapons, the chief of which, as among all the nations of antiquity, were the bow, the spear, and the sword. They were skilful horsemen, and made use of chariots of war. Their great occupation, aside from agriculture, was hunting, in which they were trained by exposure for war. They were born to conquer and rule, like the Romans, and cared for little except the warlike virtues.

Such were the Persians and the rugged country in which they lived, with their courage and fortitude, their love of freedom, their patriotism, their abhorrence of lies, their self-respect allied with pride, their temperance and frugality, forming a noble material for empire and dominion when the time came for the old monarchies to fall into their hands,—the last and greatest of all the races that had ruled the Oriental world, and kindred in their remote ancestry with those European conquerors who laid the foundation of modern civilization.

Of these Persians Cyrus was the type-man, combining in himself all that was admirable in his countrymen, and making so strong an impression on the Greeks that he is presented by their historians as an ideal prince, invested with all those virtues which the mediæval romance-writers have ascribed to the knights of chivalry.

The Persians were ruled by independent chieftains, or petty kings, who acknowledged fealty to Media, so that Persia was really a province of Media, as Burgundy was of France in the Middle Ages, and as Babylon at one period was of Assyria. The most prominent of these chieftains or princes was Achæmenes, who is regarded as the founder of the Persian monarchy. To this royal family of the Achæmenidæ Cyrus belonged. His father Cambyses, called by some a satrap and by others a king, married, according to Herod-

otus, a daughter of Astyages, the last of the Median monarchs.

The youth and education of Cyrus are invested with poetic interest by both Herodotus and Xenophon, but their narratives have no historical authority in the eyes of critics, any more than Livy's painting of Romulus and Remus: they belong to the realm of romance rather than authentic history. Nevertheless the legend of Cyrus is beautiful, and has been repeated by all succeeding historians.

According to this legend, Astyages — a luxurious and superstitious monarch, without the warlike virtues of his father, who had really built up the Median empire — had a dream that troubled him, which being interpreted by the Magi, priests of the national religion, was to the effect that his daughter Mandanê (for he had no legitimate son) would be married to a prince whose heir should seize the supreme power of Media. To prevent this, he married her to a prince beneath her rank, for whom he felt no fear, — Cambyzes, the chief governor or king of Persia, who ruled a territory to the South, about one fifth the size of Media, and which practically was a dependent province. Another dream which alarmed Astyages still further, in spite of his precaution, induced him to send for his daughter, so that having her in his power he might easily destroy her offspring. As soon as Cyrus was born therefore in

the royal palace at Ecbatana, the king intrusted the infant prince to one of the principal officers of his court, named Harpagus, with peremptory orders to destroy him. Harpagus, although he professed unconditional obedience to his monarch, had scruples about taking the life of one so near the throne, the grandson of the king and presumptive heir of the monarchy. So he, in turn, intrusted the royal infant to the care of a herdsman, in whom he had implicit confidence, with orders to kill him. The herdsman had a tender-hearted and conscientious wife who had just given birth to a dead child, and she persuaded her husband — for even in Media women virtually ruled, as they do everywhere, if they have tact — to substitute the dead child for the living one, deck it out in the royal costume, and expose it to wild beasts. This was done, and Cyrus remained the supposed child of the shepherd. The secret was well kept for ten years, and both Astyages and Harpagus supposed that Cyrus was slain.

Cyrus meanwhile grew up among the mountains, a hardy and beautiful boy, exposed to heat and cold, hunger and fatigue, and thus was early inured to danger and hardship. Added to personal beauty was remarkable courage, frankness, and brightness, so that he took the lead of other boys in their amusements. One day they played king, and Cyrus was chosen to represent royalty, which he acted so literally as to

beat the son of a Median nobleman for disobedience. The indignant and angry father complained at once to the king, and Astyages sent for the herdsman and his supposed son to attend him in his palace. When the two mountaineers were ushered into the royal presence, Astyages was so struck with the beauty, wit, and boldness of the boy that he made earnest inquiries of the herdsman, who was forced to tell the truth, and confessed that the youth was not his son, but had been put into his hands by Harpagus with orders to destroy him. The royal origin of Cyrus was now apparent, and the king sent for Harpagus, who corroborated the statement of the herdsman. Astyages dissembled his wrath, as Oriental monarchs can, who are trained to dissimulation, and the only punishment he inflicted on Harpagus was to set before him at a banquet a dish made of the arms and legs of a dead infant. This the courtier in turn professed to relish, but henceforth became the secret and implacable enemy of the king.

Herodotus tells us that Astyages took the boy, unmistakably his grandson and heir, to his palace to be educated according to his rank. Cyrus was now brought up with every honor and the greatest care, taught to hunt and ride and shoot with the bow like the highest nobles. He soon distinguished himself for his feats in horsemanship and skill in hunting wild animals, winning universal admiration, and disarming

envy by his tact, amiability, and generosity, which were as marked as his intellectual brilliancy, — being altogether a model of reproachless chivalry.

For some reason, however, the fears and jealousy of Astyages were renewed, and Cyrus was sent to his father in Persia with costly gifts. Possibly he was recalled by Cambyses himself, for a father by all the Eastern codes had a right to the person of his son.

No sooner was Cyrus established in Persia, — a country which it would seem he had never before seen, — than he was sought by the discontented Persians to head a revolt against their masters, and he availed himself of the disaffection of Harpagus, the most influential of the Median noblemen, for the dethronement of his grandfather. Persia arose in rebellion against Media. A war ensued, and in a battle between the conflicting forces Astyages was defeated and taken prisoner, but was kindly treated by his magnanimous conqueror. This battle ended the Median ascendancy, and Cyrus became the monarch of both Media and Persia.

Since the Medes belonged to the same Aryan family as the Persians, and had the same language, religion, and institutions, with slight differences, and lived among the mountains exposed to an uncongenial climate with extremes of heat and cold, and were doomed to hard and incessant labors for a subsistence, and were there-

fore — that is, the ordinary people — frugal, industrious, and temperate, it will be seen that what we have said of Persia equally applies to Media, except the possession by the latter of political power as wielded by the sovereign of a larger State.

Before a central power was established in Media, the country had been — as in all nations in their formative state — ruled by chieftains, who acknowledged as their supreme lord the King of Assyria, who reigned in Nineveh. Among these chieftains was a remarkable man called Deioces, so upright and able that he was elected king. Deioces reigned fifty-three years wisely and well, bequeathing the kingdom he had founded to his son Phraortes, under whom Media became independent of Assyria. His son and successor Cyaxares, who died 593 B. C., was a successful warrior and conqueror, and was the founder of Median greatness. With the assistance of Nabopolassar, a Babylonian general who had also revolted against the Assyrian monarch, Cyaxares succeeded, after repeated failures, in taking Nineveh and destroying the great Assyrian Empire which had ruled the Eastern world for several centuries. The northern and eastern provinces were annexed to Media, while the Babylonian valley of the Euphrates in the south fell to the share of Nabopolassar, who established the Babylonian ascendancy. This in its turn was greatly

augmented by his son Nebuchadnezzar, one of the most famous conquerors of antiquity, whose empire became more extensive even than the Assyrian. He reigned in Babylon with unparalleled splendor, and made his capital the wonder and the admiration of the world, enriching and ornamenting it with palaces, temples, and hanging gardens, and strengthening its defences to such a marvellous degree that it was deemed impregnable.

Cyaxares the Median meanwhile raised up in Ec-batana a rival power to that of Babylon, although he devoted himself to warlike expeditions more than to the adornment of his capital. He penetrated with his invincible troops as far to the west as Lydia in Asia Minor, then ruled by the father of Cræsus, and thus became known to the Ionian cities which the Greeks had colonized. After a brilliant reign, Cyaxares transmitted his empire to an unworthy son, — Astyages, the grandfather of Cyrus, whose loss of the throne has been already related. With Astyages perished the Median Empire, which had lasted only about one hundred years, and Media was incorporated with Persia. Henceforth the Medes and Persians are spoken of as virtually one nation, similar in religion and customs, and furnishing equally the best cavalry in the world. Under Cyrus they became the ascendent power in Asia, and maintained their ascendancy until their conquest by Alexandre

The union between Media and Persia was probably as complete as that between Burgundy and France, or that of Scotland with England. Indeed, Media now became the residence of the Persian kings, whose palaces at Ecbatana, Susa, and Persepolis nearly rivalled those of Babylon. Even modern Persia comprises the ancient Media.

The reign of Cyrus properly begins with the conquest of Media, or rather its union with Persia, B. C. 549. We know, however, but little of the career of Cyrus after he became monarch of both Persia and Media, until he was forty years of age. He was probably engaged in the conquest of various barbaric hordes before his memorable Lydian campaign. But we are in ignorance of his most active years, when he was exposed to the greatest dangers and hardships, and when he became perfected in the military art, as in the case of Cæsar amid the marshes and forests of Gaul and Belgium. The fame of Cæsar rests as much on his conquests of the Celtic barbarians of Europe as on his conflict with Pompey; but whether Cyrus obtained military fame or not in his wars against the Turanians, he doubtless proved himself a benefactor to humanity more in arresting the tide of Scythian invasion than by those conquests which have given him immortality.

When Cyrus had cemented his empire by the con-

quest of the Turanian nations, especially those that dwelt between the Caspian and Black seas, his attention was drawn to Lydia, the most powerful kingdom of western Asia, whose monarch, Cræsus, reigned at Sardis in Oriental magnificence. Lydia was not much known to distant States until the reign of Gyges, about 716 B. C., who made war on the Dorian and Ionian Greek colonies on the coast of Asia Minor, the chief of which were Miletus, Smyrna, Colophon, and Ephesus. His successor Ardys continued this warfare, but was obliged to desist because of an invasion of the Cimmerians, — barbarians from beyond the Caucasus, driven away from their homes by the Scythians. His grandson Alyattes, greatest of the Lydian monarchs, succeeded in expelling the Cimmerians from Lydia. After subduing some of the maritime cities of Asia Minor, this monarch faced the Medes, who had advanced their empire to the river Halys, the eastern boundary of Lydia, which flows northwardly into the Euxine. For five years Alyattes fought the Medes under Cyaxares with varying success, and the war ended by the marriage of the daughter of the Lydian king with Astyages. After this, Alyattes reigned forty-three years, and was buried in a tomb whose magnificence was little short of the grandest of the Egyptian monuments.

Cræsus, his son, entered upon a career which reminds us of Solomon, the inheritor of the conquests

of David. Like the Jewish monarch, Cræsus¹ was rich, luxurious, and intellectual. His wealth, obtained chiefly from the mines of his kingdom, was a marvel to the Greeks. His capital Sardis became the largest in western Asia, and one of the most luxurious cities known to antiquity, whither resorted travellers from all parts of the world, attracted by the magnificence of the court, among whom was Solon himself, the great Athenian law-giver. Cræsus continued the warfare on the Greek cities of Asia, and forced them to become his tributaries. He brought under his sway most of the nations to the west of the Halys, and though never so great a warrior as his father, he became very powerful. He was as generous in his gifts as he was magnificent in his tastes. His offerings to the oracle at Delphi were unprecedented in their value, when he sought advice as to the wisdom of engaging in war with Cyrus. Of the three great Asian empires, Cræsus now saw his father's ally, Babylon, under a weak and dissolute ruler; Media, absorbed into Persia under the power of a valiant and successful conqueror; and his own empire, Lydia, threatened with attack by the growing ambition of Persia. Hérodoteus says he "was led to consider whether it were possible to check the growing power of that people."

It was the misfortune of Cræsus to overrate his strength, — an error often seen in the career of fortu-

nate men, especially those who enter upon a great inheritance. It does not appear that Cræsus desired war with Persia, but he did not dread it, and felt confident that he could overcome a man whose chief conquests had been made over barbarians. Perhaps he felt the necessity of contending with Cyrus before that warrior's victories and prestige should become overwhelming, for the Persian monarch obviously aimed at absorbing all Asia in his empire; at any rate, when informed by the oracle at Delphi that if he fought with the Persians he would destroy a mighty empire, Cræsus interpreted the response in his own favor.

Cræsus made great preparations for the approaching contest, which was to settle the destiny of Asia Minor. The Greeks were on his side, for they feared the Persians more than they did the Lydians. With the aid of Sparta, the most warlike of the Grecian States, he advanced to meet the Persian conqueror, not however without the expostulation of some of his wisest counsellors. One of them, according to Herodotus, ventured to address him with these plain words: "Thou art about, O King, to make war against men who wear leather trousers and other garments of leather; who feed not on what they like, but on what they can get from a soil which is sterile and unfriendly; who do not indulge in wine, but drink water; who possess no figs, nor anything which is good to eat. If, then, thou

conquerest them, what canst thou get from them, seeing that they have nothing at all? But if they conquer thee, consider how much that is precious thou wilt lose; if they once get a taste of our pleasant things, they will keep such a hold of them that we never shall be able to make them lose their grasp." We cannot consider Crœsus as utterly infatuated in not taking this advice, since war had become inevitable. It was "either anvil or hammer," as between France and Prussia in 1870-72, — as between all great powers that accept the fortune of war, ever uncertain in its results. The only question seems to have been who should first take the offensive in a war that had been long preparing, and in which defeat would be followed by the utter ruin of the defeated party.

The Lydians began the attack by crossing the Halys and entering the enemy's territory. The first battle took place at Pteria in Cappadocia, near Sinope on the Euxine, but was indecisive. Both parties fought bravely, and the slaughter on both sides was dreadful, the Lydians being the most numerous, and the Persians the most highly disciplined. After the battle of Pteria, Crœsus withdrew his army to his own territories and retired upon his capital, with a view of augmenting his forces; while Cyrus, with the instinct of a conqueror, ventured to cross the Halys in pursuit, and to march rapidly on Sardis before the enemy could collect an-

other army. Prompt decision and celerity of movement characterize all successful warriors, and here it was that Cyrus showed his military genius. Before Cræsus was fully prepared for another fight, Cyrus was at the gates of Sardis. But the Lydian king rallied what forces he could, and led them out to battle. The Lydians were superior in cavalry; seeing which, Cyrus, with that fertility of resource which marked his whole career, collected together the camels which transported his baggage and provisions, and placed them in the front of his array, since the horse, according to Herodotus, has a natural dread of the camel and cannot abide his sight or his smell. The result was as Cyrus calculated; the cavalry of the Lydians turned round and galloped away. The Lydians fought bravely, but were driven within the walls of their capital. Cyrus vigorously prosecuted the siege, which lasted only fourteen days, since an attack was made on the side of the city which was undefended, and which was supposed to be impregnable and unassailable. The proud city fell by assault, and was given up to plunder. Cræsus himself was taken alive, after a reign of fourteen years, and the mighty Lydia became a Persian province.

There is something unusually touching in the fate of Cræsus after so great prosperity. Saved by Cyrus from an ignominious and painful death, such as the barbarous customs of war then made common, the

unhappy Lydian monarch became, it is said, the friend and admirer of the Conqueror, and was present in his future expeditions, and even proved a wise and faithful counsellor. If some proud monarchs by the fortune of war have fallen suddenly from as lofty an eminence as that of Cræsus, it is certain that few have yielded with nobler submission than he to the decrees of fate.

The fall of Sardis, — B. C. 546, according to Grote, — was followed by the submission of all the States that were dependent on Lydia. Even the Grecian colonies in Asia Minor were annexed to the Persian Empire.

The conquest of the Ionian cities, first by Cræsus and then by Cyrus, was attended with important political consequences. Before the time of Cræsus the Greek cities of Asia were independent. Had they combined together for offence and defence, with the assistance of Sparta and Athens, they might have resisted the attacks of both Lydians and Persians. But the autonomy of cities and states, favorable as it was to the development of art, literature, and commerce, as well as of individual genius in all departments of knowledge and enterprise, was not calculated to make a people politically powerful. Only a strong central power enables a country to resist hostile aggressions on a great scale. Thus Greece herself ultimately fell into the hands of Philip, and afterward into those of the Romans.

The conquest of the Ionian cities also introduced into Asia Minor and perhaps into Europe Oriental customs, luxuries, and wealth hitherto unknown. Certainly when Persia became an irresistible power and ruled the conquered countries by satraps and royal governors, it assimilated the Greeks with Asiatics, and modified the forms of social life; it brought Asia and Europe together, and produced a rivalry which finally ended in the battle of Marathon and the subsequent Asiatic victories of Alexander. While the conquests of the Persians introduced Oriental ideas and customs into Greece, the wars of Alexander extended the Grecian sway in Asia. The civilized world opened toward the East; but with the extension of Greek ideas and art, there was a decline of primitive virtues in Greece herself. Luxury undermined power.

The annexation of Asia Minor to the empire of Cyrus was followed by a protracted war with the barbarians on his eastern boundaries. The imperfect subjugation of barbaric nations living in Central Asia occupied Cyrus, it is thought, about twelve years. He pushed his conquests to the Iaxartes on the north and Afghanistan on the east, reducing that vast country which lies between the Caspian Sea and the deserts of Tartary.

Cyrus was advancing in years before he undertook the conquest of Babylon, the most important of all his

undertakings, and for which his other conquests were preparatory. At the age of sixty, Cyrus, 538 B. C., advanced against Narbonadius, the proud king of Babylon, — the only remaining power in Asia that was still formidable. The Babylonian Empire, which had arisen on the ruins of the Assyrian, had lasted only about one hundred years. Yet what wonders and triumphs had been seen at Babylon during that single century! What progress had been made in arts and sciences! What grand palaces and temples had been erected! What a multitude of captives had added to the pomp and wealth of the proudest city of antiquity! Babylon the great, — “the glory of kingdoms,” “the praise of the whole earth,” the centre of all that was civilized and all that was corrupting in the Oriental world, with its soothsayers, its magicians, its necromancers, its priests, its nobles, — was now to fall, for its abominations cried aloud to heaven for punishment.

This great city was built on both sides of the Euphrates, was fifteen miles square, with gardens and fields capable of supporting a large population, and was stocked with provisions to maintain a siege of indefinite length against any enemy. The accounts of its walls and fortifications exceed belief, estimated by Herodotus to be three hundred and fifty feet in height, with a wide moat surrounding them, which could not be bridged or crossed by an invading army.

The soldiers of Narbonadius looked with derision on the veteran forces of Cyrus, although they were inured to the hardships and privations of incessant war. To all appearance the city was impregnable, and could be taken only by unusual methods. But the genius of the Persian conqueror, according to traditional accounts, surmounted all difficulties. Who else would have thought of diverting the Euphrates from its bed into the canals and gigantic reservoirs which Nebuchadnezzar had built for purposes of irrigation? Yet this seems to have been done. Taking advantage of a festival, when the whole population were given over to bacchanalian orgies, and therefore off their guard, Cyrus advanced, under the cover of a dark night, by the bed of the river, now dry, and easily surprised the drunken city, slaying the king, with a thousand of his lords, as he was banqueting in his palace. The slightest accident or miscarriage would have defeated so bold an operation. The success of Cyrus had all the mystery and solemnity of a Providential event. Though no miracle was wrought, the fall of Babylon — so strong, so proud, so defiant — was as wonderful as the passage of the Israelites across the Red Sea, or the crumbling walls of Jericho before the blasts of the trumpets of Joshua.

However, this account is to be taken with some reserve, since by the discoveries of historical "cylinders,"

— the clay books whereon the Chaldæan priests and scribes recorded the main facts of the reigns of their monarchs, — and especially one called the “Proclamation Cylinder,” prepared for Cyrus after the fall of Babylon, it would seem that dissension and treachery within had much to do with facilitating the entrance of the invader. Narbonadius, the second successor of Nebuchadnezzar, had quarrelled with the priesthood of Babylon, and neglected the worship of Bel-Marduk and Nebo, the special patron gods of that city. The captive Jews also, who had been now nearly fifty years in the land, had grown more zealous for their own God and religion, more influential and wealthy, and even had become in some sort a power in the State. The invasion of Cyrus — a monotheist like themselves — must have seemed to them a special providence from Jehovah; indeed, we know that it did, from the records in II. Chronicles xxxvi. 22, 23: “The Lord stirred up the spirit of Koresh, King of Persia, that he made a proclamation throughout all his kingdom, and put it also in writing.” The same words occur in the beginning of the Book of Ezra, both referring to the sending home of the Jews after the fall of Babylon; the forty-sixth chapter of Isaiah also: “The Lord saith of Koresh, He is my shepherd, and shall perform all my pleasure.”

Babylon was not at that time levelled with the ground, but became one of the capitals of the Persian

Empire, where the Persian monarch resided for more than half the year. Although the Babylonian Empire began with Nabopolassar, B. C. 625, on the destruction of Nineveh, yet Babylon was a very ancient city and the capital of the ancient Chaldæan monarchy, which lasted under various dynasties from about 2400 B. C. to 1300 B. C., when it was taken by the Assyrians under Tig Vathi-Nin. The great Assyrian Empire, which thus absorbed ancient Babylonia, lasted between six and seven hundred years, according to Herodotus, although recent discoveries and inscriptions make its continuance much longer, and was the dominant power of Asia during the most interesting period of Jewish history, until taken by Cyaxares the Median. The limits of the empire varied at different times, for the conquered States which composed it were held together by a precarious tenure. But even in its greatest strength it was inferior in size and power to the Empire of Cyrus. To check rebellion, — a source of constant trouble and weakness, — the warlike monarchs were obliged to reconquer, imposing not only tribute and fealty, but overrunning the rebellious countries with fire and sword, and carrying away captive to distant cities a large part of the population as slaves. Thus at one time two hundred thousand Jews were transported to Assyria, and the "Ten Tribes" were scattered over the Eastern world, never more to return to Palestine.

On the rebellion of Nabopolassar, in 625 B. c., Babylon recovered not only its ancient independence, but more than its ancient prestige; yet the empire of which it was the capital lasted only about the same length of time as Media and Lydia, — the most powerful monarchies existing when Cyrus was born. Babylon, however, during its brief dominion, after having been subject to Assyria for seven hundred years, reappeared in unparalleled splendor, and was probably the most magnificent capital the ancient world ever saw until Rome arose. Even after its occupancy by the Persian monarchs for two hundred years, it called out the admiration of Herodotus and Alexander alike. Its arts, its sciences, its manufactures, to say nothing of its palaces and temples, were the admiration of travelers. When the proud conqueror of Palestine beheld the magnificence he had created, little did he dream that “this great Babylon which he had built,” would become such a desolation that its very site would be uncertain, — a habitation for dragons, a dreary waste for owls and goats and wild beasts to occupy.

We should naturally suppose that Cyrus, with the kings of Asia prostrate before his satraps, would have been contented to enjoy the fruits of his labors; but there is no limit to man’s ambition. Like Alexander, he sought for new worlds to conquer, and perished, as some historians maintain, in an unsuccessful war with

some unknown barbarians on the northeastern boundaries of his empire, — even as Cæsar meditated a war with the Parthians, where he might have perished, as Crassus did. Unbounded as is human ambition, there is a limit to human aggrandizement. Great conquerors are raised up by Providence to accomplish certain results for civilization, and when these are attained, when their mission is ended, they often pass away ingloriously, — assassinated or defeated or destroyed by self-indulgence, as the case may be. It seems to have been the mission of Cyrus to destroy the ascendancy of the Semitic and Hamitic despotisms in western Asia, that a new empire might be erected by nobler races, who should establish a reign of law. For the first time in Asia there was, on the accession of Cyrus to unlimited power, a recognition of justice, and the adoration of one supreme deity ruling in goodness and truth.

This may be the reason why Cyrus treated the captive Jews with so great generosity, since he recognized in their Jehovah the Ahura-Mazda, — the Supreme God that Zoroaster taught. No political reason will account for sending back to Palestine thousands of captives with imperial presents, to erect once more their sacred Temple and rebuild their sacred city. He and all the Persian monarchs were zealous adherents of the religion of Zoroaster, the centra'

doctrine of which was the unity of God and Divine Providence in the world, which doctrine neither Egyptian nor Babylonian nor Lydian monarchs recognized. What a boon to humanity was the restoration of the Jews to their capital and country! We read of no oppression of the Jews by the Persian monarchs. Mordecai the Jew became the prime minister of such an effeminate monarch as Xerxes, while Daniel before him had been the honored minister of Darius.

Of all the Persian monarchs Cyrus was the best beloved. Xenophon made him the hero of his philosophical romance. He is represented as the incarnation of "sweetness and light." When a mere boy he delights all with whom he is brought into contact, by his wit and valor. The king of Media accepts his reproofs and admires his wisdom; the nobles of Media are won by his urbanity and magnanimity. All historians praise his simple habits and unbounded generosity. In an age when polygamy was the vice of kings, he was contented with one wife, whom he loved and honored. He rejected great presents, and thought it was better to give than to receive. He treated women with delicacy and captives with magnanimity. He conducted war with unknown mildness, and converted the conquered into friends. He exalted the dignity of labor, and scorned all baseness and lies. His piety and manly virtues may have been exaggerated by his

admirers, but what we do know of him fills us with admiration. Brilliant in intellect, lofty in character, he was an ideal man, fitted to be the guide of a noble nation whom he led to glory and honor. Other warriors of world-wide fame have had, like him, great excellencies, marred by glaring defects; but no vices or crimes are ascribed to Cyrus, such as stained the characters of David and Constantine. The worst we can say of him is that he was ambitious, and delighted in conquest; but he was a conqueror raised up to elevate a religious race to a higher plane, and to find a field for the development of their energies, whatever may be said of their subsequent degeneracy. "The grandeur of his character is well rendered in that brief and unassuming inscription of his, more eloquent in its lofty simplicity than anything recorded by Assyrian and Babylonian kings: 'I am Kurush [Cyrus] the king, the Achæmenian.'" Whether he fell in battle, or died a natural death in one of his palaces, he was buried in the ancient but modest capital of the ancient Persians, Pasargadæ; and his tomb was intact in the time of Alexander, who visited it,—a sort of marble chapel raised on a marble platform thirty-six feet high, in which was deposited a gilt sarcophagus, together with Babylonian tapestries, Persian weapons, and rare jewels of great value. This was the inscription on his tomb: "O man, I am Kurush, the son of Kambujiya, who

founded the greatness of Persia and ruled Asia ; grudge me not this monument."

Cyrus was succeeded by his son Cambyzes, who though not devoid of fine qualities was jealous and tyrannical. He caused his own brother Smerdis to be put to death. He completed the conquests of his father by adding Egypt to his empire. In a fit of remorse for the murder of his brother he committed suicide, and the empire was usurped by a Magian impostor, called Gaumata, who claimed to be the second son of Cyrus. His reign, however, was short, he being slain by Darius the son of Hystaspes, belonging to another branch of the royal family. Darius was a great general and statesman, who reorganized the empire and raised it to the zenith of its power and glory. It extended from the Greek islands on the west to India on the east. This monarch even penetrated to the Danube with his armies, but made no permanent conquest in Europe. He made Susa his chief capital, and also built Persepolis, the ruins of which attest its ancient magnificence. It seems that he was a devout follower of Zoroaster, and ascribed his successes to the favor of Ahura-Mazda, the Supreme Deity.

It was during the reign of Darius that Persia came in contact with Greece, in consequence of the revolt of the Ionian cities of Asia Minor, which, however, was easily suppressed by the Persian satrap. Then

followed two invasions of Greece itself by the Persians under the generals of Darius, and their defeat at Marathon by Miltiades.

Darius was succeeded by Xerxes, the Ahasuerus of the Hebrew Scriptures, whose invasion of Greece with the largest army the world ever saw properly belongs to Grecian history. It was reserved for the heroes of Plataea to teach the world the lesson that the strength of armies is not in multitudes but in discipline, — a lesson confirmed by the conquests of Alexander and Cæsar.

On the fall of the Persian Empire three hundred years after the fall of Babylon, and the establishment of the Greek rule in Asia under the generals of Alexander, Persia proper did not cease to be formidable. Under the Sassanian princes the ambition of the Achæmenians was revived. Sapor defied Rome herself, and dragged the Emperor Valerian in disgraceful captivity to Ctesiphon, his capital. Sapor II. was the conqueror of the Emperor Julian, and Chrosroes was an equally formidable adversary. In the year 617 A. D. Persian warriors advanced to the walls of Constantinople, and drove the Emperor Heraclius to despair.

Thus Persia never lost wholly its ancient prestige, and still remains, after the rise and fall of so many dynasties, and such great vicissitudes from Greek and Arab conquests, a powerful country twice the size of

Germany, under the rule of an independent prince. There seems no likelihood of her ever again playing so grand a part in the world's history as when, under the great Cyrus, she prepared the transfer of empire from the Orient to the Occident. But "what has been, has been, and she has had her hour."

AUTHORITIES.

HERODOTUS and Xenophon are our main authorities, though not to be fully relied upon. Of modern works Rawlinson's *Ancient Monarchies* and Rawlinson's *Herodotus* are the most valuable. Ragozin has written interesting books on Media, Persia, Assyria, and Chaldæa, making special note of the researches of European travellers in the East. Fergusson, Layard, Sayce, and George Smith have shed light on all this ancient region. Johnson's work is learned but indefinite. Benjamin is the latest writer on the history of Persia; but a satisfactory life of Cyrus has yet to be written.

JULIUS CÆSAR.

IMPERIALISM.

THE most august name in the history of the old Roman world, and perhaps of all antiquity, is that of Julius Cæsar; and a new interest has of late been created in this extraordinary man by the brilliant sketch of his life and character by Mr. Froude, who has whitewashed him, as is the fashion with hero-worshippers, like Carlyle in his history of Frederick II. But it is not an easy thing to reverse the verdict of the civilized world for two thousand years, although a man of genius can say many interesting things and offer valuable suggestions.

In his *Life of Cæsar* Mr. Froude seems to vindicate Imperialism, not merely as a great necessity in the corrupt times which succeeded the civil wars of Marius and Sulla, but as a good thing in itself. It seems to me that while there was a general tendency to Imperialism in the Roman world for one or two hundred

years before Christ, the whole tendency of modern governments is against it, and has been since the second English Revolution. It still exists in Russia and Turkey, possibly in Germany and Austria; yet constitutional forms of government seem to be gradually taking its place. What a change in England, France, Italy, and Spain during the last hundred years!—what a breaking up of the old absolutism of the Bourbons! Even the imperialism of Napoleon is held in detestation by a large class of the French nation.

It may have been necessary for such a man as Cæsar to arise when the Romans had already conquered a great part of the civilized world, and when the various provinces which composed the Empire needed a firm, stable, and uniform government in the hands of a single man, in order to promote peace and law,—the first conditions of human society. But it is one thing to recognize the majesty of divine Providence in furnishing a remedy for the peculiar evils of an age or people, and quite another thing to make this remedy a panacea for all the future conditions of nations. If we believe in the moral government of this world by a divine and supreme Intelligence whom we call God, then it is not difficult to see in Julius Cæsar, after nearly two thousand years, an instrument of Providence like Constantine, Charlemagne, Richelieu, and Napoleon himself. It matters nothing whether Cæsar was good or bad,

whether he was a patriot or a usurper, so far as his ultimate influence is concerned, if he was the instrument of an overruling Power; for God chooses such instruments as he pleases. Even in human governments it is sometimes expedient to employ rogues in order to catch rogues, or to head off some peculiar evil that honest people do not know how to manage. But because a bad man is selected by a higher power to do some peculiar work, it does not follow that this bad man should be praised for doing it, especially if the work is good only so far as it is overruled. Both human consciousness and Christianity declare that it is a crime to shed needless and innocent blood. If ambition prompts a man to destroy his rivals and fill the world with miseries in order to climb to supreme power, then it is an insult to the human understanding to make this ambition synonymous with patriotism. A successful conqueror may be far-sighted and enlightened, whatever his motives for conquest; but because he is enlightened, it does not follow that he fights battles with the supreme view of benefiting his country, like William III. and George Washington. He may have taken the sword chiefly to elevate himself; or, after having taken the sword with a view of rendering important services, and having rendered these services, he may have been diverted from his original intentions, and have fought for the gratification of per-

sonal ambition, losing sight utterly of the cause in which he embarked.

Now this is the popular view which the world has taken of Cæsar. Shakspeare may have been unjust in his verdict; but it is a verdict which has been sustained by most writers and by popular sentiment during the last three hundred years. It was also the verdict of Cicero, of the Roman Senate, and of ancient historians. It is one of my objects to show in this lecture how far this verdict is just. It is another object to point out the services of Cæsar to the State, which, however great and honestly to be praised, do not offset crime.

Caius Julius Cæsar belonged to one of the proudest and most ancient of the patrician families of Rome,—a branch of the *gens Julia*, which claimed a descent from Iules, the son of Æneas. His father, Caius Julius, married Aurelia, a noble matron of the Cotta family, and his aunt Julia married the great Marius; so that, though he was a patrician of the purest blood, his family alliances were either plebeian or on the liberal side in politics. He was born one hundred years before Christ, and received a good education, but was not precocious, like Cicero. There was nothing remarkable about his childhood. “He was a tall and handsome man, with dark, piercing eyes, sallow com-

plexion, large nose, full lips, refined and intellectual features, and thick neck." He was particular about his appearance, and showed a studied negligence of dress. His uncle Marius, in the height of his power, marked him out for promotion, and made him a priest of Jupiter when he was fourteen years old. On the death of his father, a man of prætorian rank, and therefore a senator, at the age of seventeen Cæsar married Cornelia, the daughter of Cinna, which connected him still more closely with the popular party. He was only a few years younger than Cicero and Pompey. When he was eighteen he attracted the notice of Sulla, then dictator, who wished him to divorce his wife and take such a one as he should propose,—which the young man, at the risk of his life, refused to do. This boldness and independence of course displeased the Dictator, who predicted his future. "In this young Cæsar," said he, "there are many Mariuses;" but he did not kill him, owing to the intercession of powerful friends.

The career of Cæsar may be divided into three periods, during each of which he appeared in a different light: the first, until he began the conquest of Gaul, at the age of forty-three; the second, the time of his military exploits in Gaul, by which he rendered great services and gained popularity and fame; and the third, that of his civil wars, dictatorship, and imperial reign.

In the first period of his life, for about twenty-five years, he made a mark indeed, but rendered no memorable services to the State and won no especial fame. Had he died at the age of forty-three, his name would probably not have descended to our times, except as a leading citizen, a good lawyer, and powerful debater. He saw military service, almost as a matter of course; but he was not particularly distinguished as a general, nor did he select the military profession. He was eloquent, aspiring, and able, as a young patrician; but, like Cicero, it would seem that he sought the civil service, and made choice of the law, by which to rise in wealth and power. He was a politician from the first; and his ambition was to get a seat in the Senate, like all other able and ambitious men. Senators were not hereditary, however nobly born, but gained their seats by election to certain high offices in the gift of the people, called *curule* offices, which entitled them to senatorial position and dignity. A seat in the Senate was the great object of Roman ambition; because the Senate was the leading power of the State, and controlled the army, the treasury, religious worship, and the provinces. The governors and ambassadors, as well as the dictators, were selected by this body of aristocrats. In fact, to the Senate was intrusted the supreme administration of the Empire, although the source of power was technically and theoretically in the people.

or those who had the right of suffrage; and as the people elected those magistrates whose offices entitled them to a seat in the Senate, the Senate was virtually elected by the people. Senators held their places for life, but could be weeded out by the censors. And as the Senate in its best days contained between three and four hundred men, not all the curule magistrates could enter it, unless there were vacancies; but a selection from them was made by the censors. So the Senate, in all periods of the Roman Republic, was composed of experienced men,—of those who had previously held the great offices of State.

To gain a seat in the Senate, therefore, it was necessary to be elected by the people to one of the great magistracies. In the early ages of the Republic the people were incorruptible; but when foreign conquest, slavery, and other influences demoralized them, they became venal and sold their votes. Hence only rich men, ordinarily, were elected to high office; and the rich men, as a rule, belonged to the old families. So the Senate was made up not only of experienced men, but of the aristocracy. There were rich men outside the Senate,—successful plebeians, men who had made fortunes by trade, bankers, monopolists, and others; but these, if ambitious of social position or political influence, became gradually absorbed among the senatorial families. Those who could afford to buy

the votes of the people, and those only, became magistrates and senators. Hence the demagogues were rich men and belonged to the highest ranks, like Clodius and Catiline.

It thus happened that, when Julius Cæsar came upon the stage, the aristocracy controlled the elections. The people were indeed sovereign; but they abdicated their power to those who would pay the most for it. The constitution was popular in name; in reality it was aristocratic, since only rich men (generally noble) could be elected to office. Rome was ruled by aristocrats, who became rich as the people became poor. The great source of senatorial wealth was in the control of the provinces. The governors were chosen by the Senate and from the Senate; and it required only one or two years to make a fortune as a governor, like Verres. The ultimate cause which threw power into the hands of the rich and noble was the venality of the people. The aristocratic demagogues bought them, in the same way that rich monopolists in our day control legislatures. The people are too numerous in this country to be directly bought up, even if it were possible, and the prizes they confer are not high enough to tempt rich men, as they did in Rome.

A man, therefore, who would rise to power at Rome must necessarily bribe the people, must purchase their votes, unless he was a man of extraordinary popularity.

—some great orator like Cicero, or successful general like Marius or Sulla; and it was difficult to get popularity except as a lawyer and orator, or as a general.

Cæsar, like Cicero and Hortensius, chose the law as a means of rising in the world; for, though of ancient family, he was not rich. He must make money by his profession, or he must borrow it, if he would secure office. It seems he borrowed it. How he contrived to borrow such vast sums as he spent on elections, I do not know. He probably made friends of rich men like Crassus, who became security for him. He was in debt to the amount of \$1,500,000 of our money before he held office. He was a bold political gambler, and played for high stakes. It would seem that he had very winning and courteous manners, though he was not distinguished for popular oratory. His terse and pregnant sentences, however, won the admiration of his friend Cicero, a brother lawyer, and he was very social and hospitable. He was on the liberal side in politics, and attacked the abuses of the day, which won him popular favor. At first he lived in a modest house with his wife and mother, in the Subarra, without attracting much notice. The first office to which he was elected was that of a Military Tribune, soon after his sojourn of two years in Rhodes to learn from Apollonius the arts of oratory. His next office was that of Quæstor, which enabled him to enter the Senate, at

the age of thirty-two; and his third office, that of *Ædile*, which gave him the control of the public buildings: the *ædiles* were expected to decorate the city, and this gave him opportunities of cultivating popularity by splendor and display. The first thing which brought him into notice as an orator was a funeral oration he pronounced on his Aunt Julia, the widow of Marius. The next fortunate event of his life was his marriage with Pompeia, a cousin of Pompey, who was then the foremost man in Rome, having distinguished himself in Spain and in putting down the slave insurrection under Spartacus; but Pompey's great career in the East had not yet commenced, so that the future rivals at that time were friends. Cæsar glorified Pompey in the Senate, which by virtue of his office he had lately entered. The next step to greatness was his election by the people — through the use of immense amounts of borrowed money — to the great office of *Pontifex Maximus*, which made him the pagan Pope of Rome for life, with a grand palace to live in. Soon after he was made *Prætor*, which office entitled him to a provincial government; and he was sent by the Senate to Spain as *Pro-prætor*, completed the conquest of the peninsula, and sent to Rome vast sums of money. These services entitled him to a triumph; but, as he presented himself at the same time as a candidate for the consulship, he was obliged to forego the triumph;

and was elected Consul without opposition : his vanity ever yielded to his ambition.

Thus far there was nothing remarkable in Cæsar's career. He had risen by power of money, like other aristocrats, to the highest offices of the State, showing abilities indeed, but not that extraordinary genius which has made him immortal. He was the leader of the political party which Sulla had put down, and yet was not a revolutionist like the Gracchi. He was an aristocratic reformer, like Lord John Russell before the passage of the Reform Bill, whom the people adored. He was a liberal, but not a radical. Of course he was not a favorite with the senators, who wished to perpetuate abuses. He was intensely disliked by Cato, a most excellent and honest man, but narrow-minded and conservative, — a sort of Duke of Wellington without his military abilities. The Senate would make no concessions, would part with no privileges, and submit to no changes. Like Lord Eldon, it "adhered to what was established, because it was established."

Cæsar, as Consul, began his administration with conciliation; and he had the support of Crassus with his money, and of Pompey as the representative of the army, who was then flushed with his Eastern conquests, — pompous, vain, and proud, but honest and incorruptible. Cicero stood aloof, — the greatest man in the Senate, whose aristocratic privileges he defended. He might

have aided Cæsar "in the speaking department;" but as a "new man" he was jealous of his prerogatives, and was always conservative, like Burke, whom he resembled in his eloquence and turn of mind and fondness for literature and philosophy. Failing to conciliate the aristocrats, Cæsar became a sort of Mirabeau, and appealed to the people, causing them to pass his celebrated "Leges Juliæ," or reform bills; the chief of which was the "land act," which conferred portions of the public lands on Pompey's disbanded soldiers for settlement,—a wise thing, which senators opposed, since it took away their monopoly. Another act required the provincial governors, on their return from office, to render an account of their stewardship and hand in their accounts for public inspection. The Julian Laws also were designed to prevent the plunder of the public revenues, the debasing of the coin, the bribery of judges and of the people at elections. There were laws also for the protection of citizens from violence, and sundry other reforms which were enlightened and useful. In the passage of these laws against the will of the Senate, we see that the people were still recognized as sovereign in *legislation*. The laws were good. All depended on their execution; and the Senate, as the administrative body, could practically defeat their operation when Cæsar's term of office expired; and this it unwisely determined to

do. The last thing it wished was any reform whatever; and, as Mr. Froude thinks, there must have been either reform or revolution. But this is not so clear to me. Aristocracy was all-powerful when money could buy the people, and when the people had no virtue, no ambition, no intelligence. The struggle at Rome in the latter days of the Republic was not between the people and the aristocracy, but between the aristocracy and the military chieftains on one side, and those demagogues whom it feared on the other. The result showed that the aristocracy feared and distrusted Cæsar; and he used the people only to advance his own ends, — of course, in the name of reform and patriotism. And when he became Dictator, he kicked away the ladder on which he climbed to power. It was Imperialism that he established; neither popular rights nor aristocratic privileges. He had no more love of the people than he had of those proud aristocrats who afterwards murdered him.

But the empire of the world — to which Cæsar at that time may, or may not, have aspired: who can tell? but probably not — was not to be gained by civil services, or reforms, or arguments in law courts, or by holding great offices, or haranguing the people at the rostrum, or making speeches in the Senate, — where he was hated for his liberal views and enlightened mind, rather than from any fear of his overturning the

constitution, — but by military services and heroic deeds and the devotion of a tried and disciplined regular army. Cæsar was now forty-three years of age, being in the full maturity of his powers. At the close of his term as Consul he sought a province where military talents were indispensable, and where he could have a long term of office. The Senate gave him the “woods and forests,” — an unsubdued country, where he would have hard work and unknown perils, and from which it was probable he would never return. They sent him to Gaul. But this was just the field for his marvellous military genius, then only partially developed; and the second period of his career now began.

It was during this second period that he rendered his most important services to the State and earned his greatest fame. The dangers which threatened the Empire came from the West, and not the East. Asia was already subdued by Sulla, Lucullus, and Pompey, or was on the point of being subdued. Mithridates was a formidable enemy; but he aimed at establishing an Asiatic empire, not conquering the European provinces. He was not so dangerous as even Pyrrhus had been. Moreover, the conquest of the East was comparatively easy, — over worn-out races and an effete civilization; it gave *éclat* to Sulla and Pompey; — as the conquest of India, with a handful of British troops, made Clive and

Hastings famous; it required no remarkable military genius, nor was it necessary for the safety of Italy. Conquest over the Oriental monarchies meant only spoliation. It was prompted by greed and vanity more than by a sense of danger. Pompey brought back money enough from the East to enrich all his generals, and the Senate besides,—or rather the State, which a few aristocrats practically owned.

But the conquest of Gaul would be another affair. It was peopled with hardy races, who cast their greedy eyes on the empire of the Romans, or on some of its provinces, and who were being pushed forward to invasion by a still braver people beyond the Rhine,—races kindred to those Teutons whom Marius had defeated. There was no immediate danger from the Germans; but there was ultimate danger, as proved by the union they made in the time of Marcus Antoninus for the invasion of the Roman provinces. It was necessary to raise a barrier against their inundations. It was also necessary to subdue the various Celtic tribes of Gaul, who were getting restless and uneasy. There was no money in a conquest over barbarians, except so far as they could be sold into slavery; but there was danger in it. The whole country was threatened with insurrections, leagues, and invasion, from the Alps to the ocean. There was a confederacy of hostile kings and chieftains; they commanded innumerable forces; they

controlled important posts and passes. The Gauls had long made fixed settlements, and had built bridges and fortresses. They were not so warlike as the Germans; but they were yet formidable enemies. United, they were like "a volcano giving signs of approaching eruption; and at any moment, and hardly without warning, another lava stream might be poured down Venetia and Lombardy."

To rescue the Empire from such dangers was the work of Cæsar; and it was no small undertaking. The Senate had given him unlimited power, for five years, over Gaul, — then a *terra incognita*, — an indefinite country, comprising the modern States of France, Holland, Switzerland, Belgium, and a part of Germany. Afterward the Senate extended the governorship five years more; so difficult was the work of conquest, and so formidable were the enemies. But it was danger which Cæsar loved. The greater the obstacles the better was he pleased, and the greater was the scope for his genius, — which at first was not appreciated, for the best part of his life had been passed in Rome as a lawyer and orator and statesman. But he had a fine constitution, robust health, temperate habits, and unbounded energies. He was free to do as he liked with several legions, and had time to perfect his operations. And his legions were trained to every kind of labor and hardship. They could build bridges, cut down forests, and

drain swamps, as well as march with a weight of eighty pounds to the man. They could make their own shoes, mend their own clothes, repair their own arms, and construct their own tents. They were as familiar with the axe and spade as they were with the lance and sword. They were inured to every kind of danger and difficulty, and not one of them was personally braver than the general who led them, or more skilful in riding a horse, or fording a river, or climbing a mountain. No one of them could be more abstemious. Luxury is not one of the peculiarities of successful generals in barbaric countries.

To give a minute sketch of the various encounters with the different tribes and nations that inhabited the vast country he was sent to conquer and govern, would be impossible in a lecture like this. One must read Cæsar's own account of his conflicts with Helvetii, Ædui, Remi, Nervii, Belgæ, Veneti, Arverni, Aquitani, Ubii, Eubœones, Treveri, and other nations between the Alps, the Pyrenees, the Rhine, and the sea. Their numbers were immense, and they were well armed, and had cavalry, military stores, efficient leaders, and indomitable courage. When beaten in one place they sprang up in another, like the Saxons with whom Charlemagne contended. They made treaties only to break them. They fought with the desperation of heroes who had their wives and children,

firesides and altars, to guard ; yet against them Cæsar was uniformly successful. He was at times in great peril, yet he never lost but one battle, and this through the fault of his generals. Yet he had able generals, whom he selected himself, — Labienus, who afterwards deserted him, Antony, Publius Crassus, Cotta, Sabinus, — all belonging to the aristocracy. They made mistakes, but Cæsar never. They would often have been cut off but for Cæsar's timely aid.

When we consider the dangers to which he was constantly exposed, the amazing difficulties he had to surmount, the hardships he had to encounter, the fears he had to allay, the murmurs he was obliged to silence, the rivers he was compelled to cross in the face of enemies, the forests it was necessary to penetrate, the swamps and mountains and fortresses which impeded his marches, we are amazed at his skill and intrepidity, to say nothing of his battles with forces ten times more numerous than his own. His fertility of resources, his lightning rapidity of movement, his sagacity and insight, his perfection of discipline, his careful husbandry of forces, his ceaseless diligence, his intrepid courage, the confidence with which he inspired his soldiers, his brilliant successes (victory after victory), with the enormous number of captives by which he and the State became enriched, — all these things dazzled his countrymen, and gave him a fame such as no general had ever

earned before. He conquered a population of warriors to be numbered by millions, with no aid from charts and maps, exposed perpetually to treachery and false information. He had to please and content an army a thousand miles from home, without supplies, except such as were precarious, — living on the plainest food, and doomed to infinite labors and drudgeries, besides attacking camps and assaulting fortresses, and fighting pitched battles. Yet he won their love, their respect, and their admiration, — and by an urbanity, a kindness, and a careful protection of their interests, such as no general ever showed before. He was a hero performing perpetual wonders, as chivalrous as the knights of the Middle Ages. No wonder he was adored, like a Moses in the wilderness, like a Napoleon in his early conquests.

This conquest of Gaul, during which he drove the Germans back to their forests, and inaugurated a policy of conciliation and moderation which made the Gauls the faithful allies of Rome, and their country its most fertile and important province, furnishing able men both for the Senate and the Army, was not only a great feat of genius, but a great service — a transcendent service — to the State, which entitled Cæsar to a magnificent reward. Had it been cordially rendered to him, he might have been contented with a sort of perpetual consulship, and with the *éclat* of being the foremost

man of the Empire. The people would have given him anything in their power to give, for he was as much an idol to them as Napoleon became to the Parisians after the conquest of Italy. He had rendered services as brilliant as those of Scipio, of Marius, of Sulla, or of Pompey. If he did not save Italy from being subsequently overrun by barbarians, he postponed their irruptions for two hundred years. And he had partially civilized the country he had subdued, and introduced Roman institutions. He had also created an army of disciplined veterans, such as never before was seen. He perfected military mechanism, that which kept the Empire together after all vitality had fled. He was the greatest master of the art of war known to antiquity. Such transcendent military excellence and such great services entitled him to the gratitude and admiration of the whole Empire, although he enriched himself and his soldiers with the spoils of his ten years' war, and did not, so far as I can see, bring great sums into the national treasury.

But the Senate was reluctant to give him the customary rewards for ten years' successful war, and for adding Western Europe to the Empire. It was jealous of his greatness and his renown. It also feared him, for he had eleven legions in his pay, and was known to be ambitious. It hated him for two reasons: first, because in his first consulship he had introduced re-

forms, and had always sided with the popular and liberal party; and secondly, because military successes of unprecedented brilliancy had made him dangerous. So, on the conclusion of the conquest of Gaul, it withdrew two legions from his army, and sought to deprive him of his promised second consulate, and even to recall him before his term of office as governor was expired. In other words, it sought to cripple and disarm him, and raise his rival, Pompey, over him in the command of the forces of the Empire.

It was now secret or open war, not between Cæsar and the Roman people, but between Cæsar and the Senate, — between a great and triumphant general and the Roman oligarchy of nobles, who, for nearly five hundred years, had ruled the Empire. On the side of Cæsar were the army, the well-to-do classes, and the people; on the side of the Senate were the forces which a powerful aristocracy could command, having the prestige of law and power and wealth, and among whom were the great names of the republic.

Mr. Froude ridicules and abuses this aristocracy, as unfit longer to govern the State, as a worn-out power that deserved to fall. He uniformly represents them as extravagant, selfish, ostentatious, luxurious, frivolous, Epicurean in opinions and in life, oppressive in all their social relations, haughty beyond endurance, and controlling the popular elections by means of bribery and

corruption. It would be difficult to refute these charges. The Patricians probably gave themselves up to all the pleasures incident to power and unbounded wealth, in a corrupt and wicked age. They had their palaces in the city and their villas in the country, their parks and gardens, their fish-ponds and game-preserves, their pictures and marbles, their expensive furniture and costly ornaments, gold and silver vessels, gems and precious works of art. They gave luxurious banquets; they travelled like princes; they were a body of kings, to whom the old monarchs of conquered provinces bowed down in fear and adulation. All this does not prove that they were incapable, although they governed for the interests of their class. They were all experienced in affairs of State, — most of them had been quæstors, ædiles, prætors, censors, tribunes, consuls, and governors. Most of them were highly educated, had travelled extensively, were gentlemanly in their manners, could make speeches in the Senate, and could fight on the field of battle when there was a necessity. They doubtless had the common vices of the rich and proud; but many of them were virtuous, patriotic, incorruptible, almost austere in morals, dignified and intellectual, whom everybody respected, — men like Cato, Brutus, Cassius, Cicero, and others. Their sin was that they wished to conserve their powers, privileges, and fortunes, like all aristocracies, — like the British House of Lords. Nor must

it be forgotten that it was under their régime that the conquest of the world was made, and that Rome had become the centre of everything magnificent and glorious on the earth.

It was doubtless shortsighted and ungrateful in these nobles to attempt to deprive Cæsar of his laurels and his promised consulship. He had earned them by grand services, both as a general and a statesman. But their jealousy and hatred were not unnatural. They feared, not unreasonably, that the successful general — rich, proud, and dictatorial from the long exercise of power, and seated in the chair of supremest dignity — would make sweeping changes; might reduce their authority to a shadow, and elevate himself to perpetual dictatorship; and thus, by substituting imperialism for aristocracy, subvert the Constitution. That is evidently what Cicero feared, as appears in his letters to Atticus. That is what all the leading Senators feared, especially Cato. It was known that Cæsar — although urbane, merciful, enlightened, hospitable, and disposed to govern for the public good — was unscrupulous in the use of tools; that he had originally gained his seat in the Senate by bribery and demagogic arts; that he was reckless as to debts, regarding money only as a means to buy supporters; that he had appropriated vast sums from the spoils of war for his own use, and, from being poor, had become the richest man in the Empire; that

he had given his daughter Julia in marriage to Pompey from political ends; that he was long-sighted in his ambition, and would be content with nothing less than the gratification of this insatiate passion. All this was known, and it gave great solicitude to the leaders of the aristocracy, who resolved to put him down, — to strip him of his power, or fight him, if necessary, in a civil war. So the aristocracy put themselves under the protection of Pompey, — a successful but overrated general, who also aimed at supreme power, with the nobles as his supporters, not perhaps as Imperator, but as the agent and representative of a subservient Senate, in whose name he would rule.

This contest between Cæsar and the aristocracy under the lead of Pompey, its successful termination in Cæsar's favor, and his brilliant reign of about four years, as Dictator and Imperator, constitute the third period of his memorable career.

Neither Cæsar nor Pompey would disband their legions, as it was proposed by Curio in the Senate and voted by a large majority. In fact, things had arrived at a crisis: Cæsar was recalled, and he must obey the Senate, or be decreed a public enemy; that is, the enemy of the power that ruled the State. He would not obey, and a general levy of troops in support of the Senate was made, and put into the hands of Pompey with unlimited command. The Tribunes of the

people, however, sided with Cæsar, and refused confirmation of the Senatorial decrees. Cæsar then no longer hesitated, but with his army crossed the Rubicon, which was an insignificant stream, but was the Rome-ward boundary of his province. This was the declaration of civil war. It was now "either anvil or hammer." The admirers of Cæsar claim that his act was a necessity, at least a public benefit, on the ground of the misrule of the aristocracy. But it does not appear that there was anarchy at Rome, although Milo had killed Clodius. There were aristocratic feuds, as in the Middle Ages. Order and law — the first conditions of society — were not in jeopardy, as in the French Revolution, when Napoleon arose. The people were not in hostile array against the nobles, nor the nobles against the people. The nobles only courted and bribed the people; but so general was corruption that a change in government was deemed necessary by the advocates of Cæsar, — at least they defended it. The gist of all the arguments in favor of the revolution is: better imperialism than an oligarchy of corrupt nobles. It is not my province to settle that question. It is my work only to describe events.

It is clear that Cæsar resolved on seizing supreme power, in taking it away from the nobles, on the ground probably that he could rule better than they, — the plea of Napoleon, the plea of Cromwell, the plea of all usurpers.

But this supreme power he could not exercise until he had conquered Pompey and the Senate and all his enemies. It must need be that "he should wade through slaughter to his throne." This alternative was forced on him, and he accepted it. He accepted civil war in order to reign. At best, he would do evil that good might come. He was doubtless the strongest man in the world; and, according to Mr. Carlyle's theory, the strongest ought to rule.

Much has been said about the rabble, — the democracy, — their turbulence, corruption, and degradation, their unfitness to rule, and all that sort of thing, which I regard as irrelevant, so far as the usurpation of Cæsar is concerned; since the struggle was not between them and the nobles, but between a fortunate general and the aristocracy who controlled the State. Cæsar was not the representative of the people or of their interests, as Tiberius Gracchus was, but the representative of the Army. He had no more sympathy with the people than he had with the nobles: he probably despised them both, as unfit to rule. He flattered the people and bought them, but he did not love them. It was his soldiers whom he loved, next to himself; although, as a wise and enlightened statesman, he wished to promote the great interests of the nation, so far as was consistent with the enjoyment of imperial rule. This friend of the people would give them spectacles and

shows, largesses of corn, — money, even, — and extension of the suffrage, but not political power. He was popular with them, because he was generous and merciful, because his exploits won their admiration, and his vast public works gave employment to them and adorned their city.

It is unnecessary to dwell on the final contest of Cæsar with the nobles, with Pompey at their head, since nothing is more familiar in history. Plainly he was not here rendering public services, as he did in Spain and Gaul, but taking care of his own interests. I cannot see how a civil war was a service, unless it were a service to destroy the aristocratic constitution and substitute imperialism, which some think was needed with the vast extension of the Empire, and for the good administration of the provinces, — robbed and oppressed by the governors whom the Senate had sent out to enrich the aristocracy. It may have been needed for the better administration of justice, for the preservation of law and order, and a more efficient central power. Absolutism may have proved a benefit to the Empire, as it proved a benefit to France under Cardinal Richelieu, when he humiliated the nobles. If so, it was only a choice of evils, for absolutism is tyranny, and tyranny is not a blessing, except in a most demoralized state of society, which it is claimed was the state of Rome at the time of the usurpation of Cæsar.

It is certain that the whole united strength of the aristocracy could not prevail over Cæsar, although it had Pompey for its defender, with his immense prestige and experience as a general.

After Cæsar had crossed the Rubicon, and it was certain he would march to Rome and seize the reins of government, the aristocracy fled precipitately to Pompey's wing at Capua, fearing to find in Cæsar another Marius. Pompey did not show extraordinary ability in the crisis. He had no courage and no purpose. He fled to Brundisium, where ships were waiting to transport his army to Durazzo. He was afraid to face his rival in Italy. Cæsar would have pursued, but had no navy. He therefore went to Rome, which he had not seen for ten years, took what money he wanted from the treasury, and marched to Spain, where the larger part of Pompey's army, under his lieutenants, were now arrayed against him. These it was necessary first to subdue. But Cæsar prevailed, and all Spain was soon at his feet. His successes were brilliant; and Gaul, Italy, Sicily, and Sardinia were wholly his own, as well as Spain, which was Pompey's province. He then rapidly returned to Rome, was named Dictator, and as such controlled the consular election, and was chosen Consul. But Pompey held the East, and, with his ships, controlled the Mediterranean, and was gathering forces for the invasion of Italy. Cæsar allowed himself but

eleven days in Rome. It was necessary to meet Pompey before that general could return to Italy. It was mid-winter,—about a year after he had crossed the Rubicon. He had with him only thirty thousand men, but these were veterans. Pompey had nine full Roman legions, which lay at Durazzo, opposite to Brundisium, besides auxiliaries and unlimited means; but he was hampered by senatorial civilians, and his legions were only used to Eastern warfare. He also controlled the sea, so that it was next to impossible for Cæsar to embark without being defeated. Yet Cæsar did cross the sea amid overwhelming obstacles, and the result was the battle of Pharsalia,—deemed one of the decisive battles of the world, although the forces of the combatants were comparatively small. It was gained by the defeat of Pompey's cavalry by a fourth line of the best soldiers of Cæsar, which was kept in reserve. Pompey, on the defeat of his cavalry, upon whom he had based his hopes, lost heart and fled. He fled to the sea,—uncertain, vacillating, and discouraged,—and sailed for Egypt, relying on the friendship of the young king; but was murdered treacherously before he set foot upon the land. His fate was most tragical. His fall was overwhelming.

This battle, in which the flower of the Roman aristocracy succumbed to the conqueror of Gaul, with vastly inferior forces, did not end the desperate contest. Two

more bloody battles were fought—one in Africa and one in Spain—before the supremacy of Cæsar was secured. The battle of Thapsus, between Utica and Carthage, at which the Roman nobles once more rallied under Cato and Labienus, and the battle of Munda, in Spain, the most bloody of all, gained by Cæsar over the sons of Pompey, settled the civil war and made Cæsar supreme. He became supreme only by the sacrifice of half of the Roman nobility and the death of their principal leaders,—Pompey, Labienus, Lentulus, Ligarius, Metellus, Scipio Afrarius, Cato, Petreius, and others. In one sense it was the contest between Pompey and Cæsar for the empire of the world. Cicero said, “The success of the one meant massacre, and that of the other slavery,”—for if Pompey had prevailed, the aristocracy would have butchered their enemies with unrelenting vengeance; but Cæsar hated unnecessary slaughter, and sought only power. In another sense it was the struggle between a single man—with enlightened views and vast designs—and the Roman aristocracy, hostile to reforms, and bent on greed and oppression. The success of Cæsar was favorable to the restoration of order and law and progressive improvements; the success of the nobility would have entailed a still more grinding oppression of the people, and possibly anarchy and future conflicts between fortunate generals and the aristocracy. Destiny or Providence gave the empire

of the world to a single man, although that man was as unscrupulous as he was able.

Henceforth imperialism was the form of government in Rome, which lasted about four hundred years. How long an aristocratic government would have lasted is a speculation. Cæsar, in his elevation to unlimited power, used his power beneficently. He pardoned his enemies, gave security to property and life, restored the finances, established order, and devoted himself to useful reforms. He cut short the grant of corn to the citizen mob ; he repaired the desolation which war had made ; he rebuilt cities and temples ; he even endeavored to check luxury and extravagance and improve morals. He reformed the courts of law, and collected libraries in every great city. He put an end to the expensive tours of senators in the provinces, where they had appeared as princes exacting contributions. He formed a plan to drain the Pontine Marshes. He reformed the calendar, making the year to begin with the first day of January. He built new public buildings, which the enlargement of business required. He seemed to have at heart the welfare of the State and of the people, by whom he was adored. But he broke up the political ascendancy of nobles, although he did not confiscate their property. He weakened the Senate by increasing its numbers to nine hundred, and by appointing senators himself from his army and from the provinces,—those who

would be subservient to him, who would vote what he decreed.

Cæsar's ruling passion was ambition, — thirst of power ; but he had no great animosities. He pardoned his worst enemies, — Brutus, Cassius, and Cicero, who had been in arms against him ; nor did he reign as a tyrant. His habits were simple and unostentatious. He gave easy access to his person, was courteous in his manners, and mingled with senators as a companion rather than as a master. Like Charlemagne, he was temperate in eating and drinking, and abhorred gluttony and drunkenness, — the vices of the aristocracy and of fortunate plebeians alike. He was indefatigable in business, and paid attention to all petitions. He was economical in his personal expenses, although he lavished vast sums upon the people in the way of amusing or bribing them. He dispensed with guards and pomps, and was apparently reckless of his life : anything was better to him than to live in perpetual fear of conspirators and traitors. There never was a braver man, and he was ever kind-hearted to those who did not stand in his way. He was generous, magnanimous, and unsuspecting. He was the model of an absolute prince, aside from laxity of morals. In regard to women, of their virtue he made little account. His favorite mistress was Servilia, sister of Cato and mother of Brutus. Some have even supposed that

Brutus was Cæsar's son, which accounts for his lenity and forbearance and affection. He was the high-priest of the Roman worship, and yet he believed neither in the gods nor in immortality. But he was always the gentleman, — natural, courteous, affable, without vanity or arrogance or egotism. He was not a patriot in the sense that Cicero and Cato were, or Trajan and Marcus Aurelius, since his country was made subservient to his own interests and aggrandizement. Yet he was a very interesting man, and had fewer faults than Napoleon, with equally grand designs.

But even he could not escape a retribution, in spite of his exalted position and his great services. The leaders of the aristocracy still hated him, and could not be appeased for the overthrow of their power. They resolved to assassinate him, from vengeance rather than fear. Cicero was not among the conspirators; because his discretion could not be relied upon, and they passed him by. But his heart was with them. "There are many ways," said he, "in which a man may die." It was not a wise thing to take his life; since the Constitution was already subverted, and somebody would reign as imperator by means of the army, and his death would necessarily lead to renewed civil wars and new commotions and new calamities. But angry, embittered, and passionate enemies do not listen to reason. They will not accept the inevitable. There was no way

to get rid of Cæsar but by assassination, and no one wished him out of the way but the nobles. Hence it was easy for them to form a conspiracy. It was easy to stab him with senatorial daggers. Cæsar was not killed because he had personal enemies, nor because he destroyed the liberties of Roman citizens, but because he had usurped the authority of the aristocracy.

Yet he died, perhaps at the right time, at the age of fifty-six, after an undisputed reign of only three or four years,—about the length of that of Cromwell. He was already bending under the infirmities of a premature old age. Epileptic fits had set in, and his constitution was undermined by his unparalleled labors and fatigues; and then his restless mind was planning a new expedition to Parthia, where he might have ingloriously perished like Crassus. But such a man could not die. His memory and deeds lived. He filled a rôle in history, which could not be forgotten. He inaugurated a successful revolution. He bequeathed a policy to last as long as the Empire lasted; and he had rendered services of the greatest magnitude, by which he is to be ultimately judged, as well as by his character. It is impossible for us to settle whether or not his services overbalanced the evils of the imperialism he established and of the civil wars by which he reached supreme command. Whatever view we may take of the comparative merits of an aristocracy or an

imperial despotism in a corrupt age, we cannot deny to Cæsar some transcendent services and a transcendent fame. The whole matter is laid before us in the language of Cicero to Cæsar himself, in the Senate, when he was at the height of his power; which shows that the orator was not lacking in courage any more than in foresight and moral wisdom:—

“Your life, Cæsar, is not that which is bounded by the union of your soul and body. Your life is that which shall continue fresh in the memory of ages to come, which posterity will cherish and eternity itself keep guard over. Much has been done by you which men will admire; much remains to be done which they can praise. They will read with wonder of empires and provinces, of the Rhine, the ocean, and the Nile, of battles without number, of amazing victories, of countless monuments and triumphs; but unless the Commonwealth be wisely re-established in institutions by you bestowed upon us, your name will travel widely over the world, but will have no fixed habitation; and those who come after you *will dispute about you* as we have disputed. Some will extol you to the skies; others will find something wanting, and the most important element of all. Remember the tribunal before which you are to stand. The ages that are to be will try you, it may be with minds less prejudiced than ours, uninfluenced either by the desire to please you or by envy of your greatness.”

Thus spoke Cicero with heroic frankness. The ages have “disputed about” Cæsar, and will continue to dis-

pute about him, as they do about Cromwell and Napoleon ; but the man is nothing to us in comparison with the ideas which he fought or which he supported, and which have the same force to-day as they had nearly two thousand years ago. He is the representative of imperialism ; which few Americans will defend, unless it becomes a necessity which every enlightened patriot admits. The question is, whether it was or was not a necessity at Rome fifty years before Christ was born. It is not easy to settle in regard to the benefit that Cæsar is supposed by some—including Mr. Froude and the late Emperor of the French—to have rendered to the cause of civilization by overturning the aristocratic Constitution, and substituting, not the rule of the people, but that of a single man. It is still one of the speculations of history ; it is not one of its established facts, although the opinions of enlightened historians seem to lean to the necessity of the Cæsarian imperialism, in view of the misrule of the aristocracy and the abject venality of the citizens who had votes to sell. But it must be borne in mind that it was under the aristocratic rule of senators and patricians that Rome went on from conquering to conquer ; that the governing classes were at all times the most intelligent, experienced, and efficient in the Commonwealth ; that their very vices may have been exaggerated ; and that the imperialism which crushed them, may also have

crushed out original genius, literature, patriotism, and exalted sentiments, and even failed to have produced greater personal security than existed under the aristocratic Constitution at any period of its existence. All these are disputed points of history. It may be that Cæsar, far from being a national benefactor by reorganizing the forces of the Empire, sowed the seeds of ruin by his imperial policy; and that, while he may have given unity, peace, and law to the Empire, he may have taken away its life. I do not assert this, or even argue its probability. It may have been, and it may not have been. It is an historical puzzle. There are two sides to all great questions. But whether or not we can settle with the light of modern knowledge such a point as this, I look upon the defence of imperialism in itself, in preference to constitutional government with all its imperfections, as an outrage on the whole progress of modern civilization, and on whatever remains of dignity and intelligence among the people.

AUTHORITIES.

Cæsar's Commentaries, *Leges Juliae*, Appian, Plutarch, Suetonius, Dion Cassius, and Cicero's Letters to Atticus are the principal original authorities. Napolcon III. wrote a dull Life of Cæsar, but it is rich in footnotes, which it is probable he did not himself make, since nothing is easier than the parade of learning. Rollin's Ancient History may be read with other general histories. Merivale's History of the Empire is able and instructive, but dry. Mr. Froude's sketch of Cæsar is the most interesting I have read, but advocates imperialism. Niebuhr's Lectures on the History of Rome is also a standard work, as well as Curtius's History of Rome.

MARCUS AURELIUS.

A. D. 121-180.

THE GLORY OF ROME.

MARCUS AURELIUS.

THE GLORY OF ROME.

MARCUS AURELIUS is immortal, not so much for what he *did* as for what he *was*. His services to the State were considerable, but not transcendent. He was a great man, but not pre-eminently a great emperor. He was a meditative sage rather than a man of action; although he successfully fought the Germanic barbarians, and repelled their fearful incursions. He did not materially extend the limits of the Empire, but he preserved and protected its provinces. He reigned wisely and ably, but made mistakes. His greatness was in his character; his influence for good was in his noble example. When we consider his circumstances and temptations, as the supreme master of a vast Empire, and in a wicked and sensual age, he is a greater moral phenomenon than Socrates or Epicurus. He was one of the best men of Pagan antiquity. History furnishes no example of an absolute monarch so pure and spotless and lofty as he was, unless it be

Alfred the Great or St. Louis. But the sphere of the Roman emperor was far greater than that of the Mediæval kings. Marcus Aurelius ruled over one hundred and twenty millions of people, without check or hindrance or Constitutional restraint. He could do what he pleased with their persons and their property. Most sovereigns, exalted to such lofty dignity and power, have been either cruel, or vindictive, or self-indulgent, or selfish, or proud, or hard, or ambitious, — men who have been stained by crimes, whatever may have been their services to civilization. Most of them have yielded to their great temptations. But Marcus Aurelius, on the throne of the civilized world, was modest, virtuous, affable, accessible, considerate, gentle, studious, contemplative, stained by no vices, — a model of human virtue. Hence he is one of the favorite characters of history. No Roman emperor was so revered and loved as he, and of no one have so many monuments been preserved. Everybody had his picture or statue in his house. He was more than venerated in his day, and his fame as a wise and good man has increased with the flight of ages.

This illustrious emperor did not belong to the family of the great Cæsar. That family became extinct with Nero, the sixth emperor. Like Trajan and Hadrian, Marcus Aurelius derived his remote origin from Spain, although he was born in Rome. His great-grandfather

was a Spaniard, and yet attained the prætorian rank. His grandfather reached the consulate. His father died while prætor, and when he himself was a child. He was adopted by his grandfather Annius Verus. But his marvellous moral beauty, even as a child, attracted the attention of the Emperor Hadrian, who bestowed upon him the honor of the æquestrian rank, at the age of six. At fifteen he was adopted by Antoninus Pius, then, as we might say, "Crown Prince." Had he been older, he would have been adopted by Hadrian himself. He thus, a mere youth, became the heir of the Roman world. His education was most excellent. From Fronto, the greatest rhetorician of the day, he learned rhetoric; from Herodes Atticus he acquired a knowledge of the world; from Diognotus he learned to despise superstition; from Apollonius, undeviating steadiness of purpose; from Sextus of Chæronea, toleration of human infirmities; from Maximus, sweetness and dignity; from Alexander, allegiance to duty; from Rusticus, contempt of sophistry and display. This stoical philosopher created in him a new intellectual life, and opened to him a new world of thought. But the person to whom he was most indebted was his adopted father and father-in-law, the Emperor Antoninus Pius. For him he seems to have had the greatest reverence. "In him," said he, "I noticed mildness of manner with firmness of resolution, contempt of vain-glory, industry

in business, and accessibility of person. From him I learned to acquiesce in every fortune, to exercise foresight in public affairs, to rise superior to vulgar praises, to serve mankind without ambition, to be sober and steadfast, to be content with little, to be practical and active, to be no dreamy bookworm, to be temperate, modest in dress, and not to be led away by novelties." What a picture of an emperor! What a contrast to such a man as Louis XIV!

We might draw a parallel between Marcus Aurelius and David, when he was young and innocent. But the person in history whom he most resembled was St. Anselm. He was a St. Anselm on the throne. Philosophical meditations seem to have been his delight and recreation; and yet he could issue from his retirement and engage in active pursuits. He was an able general as well as a meditative sage, — heroic like David, capable of enduring great fatigue, and willing to expose himself to great dangers.

While his fame rests on his "Meditations," as that of David rests upon his Psalms, he yet rendered great military services to the Empire. He put down a dangerous revolt under Avidius Cassius in Asia, and did not punish the rebellious provinces. Not one person suffered death in consequence of this rebellion. Even the papers of Cassius, who aimed to be emperor, were burned, that a revelation of enemies might not be made.

— a signal instance of magnanimity. Cassius, it seems, was assassinated by his own officers, which assassination Marcus Aurelius regretted, because it deprived him of granting a free pardon to a very able but dangerous man.

But the most signal service he rendered the Empire was a successful resistance to the barbarians of Germany, who had formed a general union for the invasion of the Roman world. They threatened the security of the Empire, as the Teutons did in the time of Marius, and the Gauls and Germans in the time of Julius Cæsar. It took him twenty years to subdue these fierce warriors. He made successive campaigns against them, as Charlemagne did against the Saxons. It cost him the best years of his life to conquer them, which he did under difficulties as great as Julius surmounted in Gaul. He was the savior and deliverer of his country, as much as Marius or Scipio or Julius. The public dangers were from the West and not the East. Yet he succeeded in erecting a barrier against barbaric inundations, so that for nearly two hundred years the Romans were not seriously molested. There still stands in "the Eternal City" the column which commemorates his victories,— not so beautiful as that of Trajan, which furnished the model for Napoleon's column in the Place Vendôme, but still greatly admired. Were he not better known for his writings, he would be famous as one of the great

military emperors, like Vespasian, Diocletian, and Constantine. Perhaps he did not add to the art of war; that was perfected by Julius Cæsar. It was with the mechanism of former generals that he withstood most dangerous enemies, for in his day the legions were still well disciplined and irresistible.

The only stains on the reign of this good and great emperor—for there were none on his character—were in allowing the elevation of his son Commodus as his successor, and his persecution of the Christians.

In regard to the first, it was a blunder rather than a fault. Peter the Great caused *his* heir to be tried and sentenced to death, because he was a sot, a liar, and a fool. He dared not intrust the interests of his Empire to so unworthy a son; the welfare of Russia was more to him than the interest of his family. In that respect this stern and iron man was a greater prince than Marcus Aurelius; for the law of succession was not established at Rome any more than in Russia. There was no danger of civil war should the natural succession be set aside, as might happen in the feudal monarchies of Europe. The Emperor of Rome could adopt or elect his successor. It would have been wise for Aurelius to have selected one of the ablest of his generals, or one of the wisest of his senators, as Hadrian did, for so great and responsible a position, rather than a wicked, cruel, dissolute son. But Commodus was the

son of Faustina also, — an intriguing and wicked woman, whose influence over her husband was unfortunately great; and, what is common in this world, the son was more like the mother than the father. (I think the wife of Eli the high-priest must have been a bad woman.) All his teachings and virtues were lost on such a reprobate. She, as an unscrupulous and ambitious woman, had no idea of seeing her son supplanted in the imperial dignity; and, like Catherine de' Medici and Agrippina, probably she connived at and even encouraged the vices of her children, in order more easily to bear rule. At any rate, the succession of Commodus to the throne was the greatest calamity that could have happened. For five reigns the Empire had enjoyed peace and prosperity; for five reigns the tide of corruption had been stayed: but the flood of corruption swept all barriers away with the accession of Commodus, and from that day the decline of the Empire was rapid and fatal. Still, probably nothing could have long arrested ruin. The Empire was doomed.

The other fact which obscured the glory of Marcus Aurelius as a sovereign was his persecution of the Christians, — for which it is hard to account, when the beneficent character of the emperor is considered. His reign was signalized for an imperial persecution, in which Justin at Rome, Polycarp at Smyrna, and Ponthinus at Lyons, suffered martyrdom. It was not

the first persecution. Under Nero the Christians had been cruelly tortured, nor did the virtuous Trajan change the policy of the government. Hadrian and Antoninus Pius permitted the laws to be enforced against the Christians, and Marcus Aurelius saw no reason to alter them. But to the mind of the Stoic on the throne, says Arnold, the Christians were "philosophically contemptible, politically subversive, and morally abominable." They were regarded as statesmen looked upon the Jesuits in the reign of Louis XV., as we look upon the Mormons, — as dangerous to free institutions. Moreover, the Christians were everywhere misunderstood and misrepresented. It was impossible for Marcus Aurelius to see the Christians except through a mist of prejudices. "Christianity grew up in the Catacombs, not on the Palatine." In allowing the laws to take their course against a body of men who were regarded with distrust and aversion as enemies of the State, the Emperor was simply unfortunate. So wise and good a man, perhaps, ought to have known the Christians better; but, not knowing them, he cannot be stigmatized as a cruel man. How different the fortunes of the Church had Aurelius been the first Christian emperor instead of Constantine! Or, had his wife Faustina known the Christians as well as Marcia the mistress of Commodus, perhaps the persecution might not have happened, — and perhaps it might. Earnest

and sincere men have often proved intolerant when their peculiar doctrines have been assailed,—like Athanasius and St. Bernard. A Stoical philosopher was trained, like a doctor of the Jewish Sandhedrim, in a certain intellectual pride.

The fame of Marcus Aurelius rests, as it has been said, on his philosophical reflections, as his “Meditations” attest. This remarkable book has come down to us, while most of the annals of the age have perished; so that even Niebuhr confesses that he knows less of the reign of Marcus Aurelius than of the early kings of Rome. Perhaps that is one reason why Gibbon begins his history with later emperors. But the “Meditations” of the good emperor survive, like the writings of Epictetus, St. Augustine, and Thomas à Kempis: one of the few immortal books,—immortal, in this case, not for artistic excellence, like the writings of Thucydides and Tacitus, but for the loftiness of thoughts alone; so precious that the saints of the Middle Ages secretly preserved them as in accord with their own experiences. It is from these “Meditations” that we derive our best knowledge of Marcus Aurelius. They reveal the man,—and a man of sorrows, as the truly great are apt to be, when brought in contact with a world of wickedness, as were Alfred and Dante.

In these “Meditations” there is a striking resemblance to the discourses of Epictetus, which alike reveal

the lofty and yet sorrowful soul, and are among the most valuable fragments which have come down from Pagan antiquity; and this is remarkable, since Epictetus was a Phrygian slave, of the lowest parentage. He belonged to the secretary and companion of Nero, whose name was Epaphroditus, and who treated this poor Phrygian with great cruelty. And yet, what is very singular, the master caused the slave to be indoctrinated in the Stoical philosophy, on account of a rare intelligence which commanded respect. He was finally manumitted, but lived all his life in the deepest poverty, to which he attached no more importance than Socrates did at Athens. In his miserable cottage he had no other furniture than a straw pallet and an iron lamp, which last somebody stole. His sole remark on the loss of the only property he possessed was, that when the thief came again he would be disappointed to find only an earthen lamp instead of an iron one. This earthen lamp was subsequently purchased by a hero-worshipper for three thousand drachmas (\$150). Epictetus, much as he despised riches and display and luxury and hypocrisy and pedantry and all phariseeism, living in the depths of poverty, was yet admired by eminent men, among whom was the Emperor Hadrian himself; and he found a disciple in Arrian, who was to him what Xenophon was to Socrates, committing his precious thoughts to writing; and these thoughts were to antiquity

what the "Imitation of Christ" was to the Renaissance—accepted by Christians as well as by pagans, and even to-day regarded as one of the most beautiful treatises on morals ever composed by man. The great peculiarity of the "Manual" and the "Discourses" is the elevation of the soul over external evils, the duty of resignation to whatever God sends, and the obligation to do right because it is right. Epictetus did not go into the dreary dialectics of the schools, but, like Socrates, confined himself to practical life,—to the practice of virtue as the greatest good,—and valued the joys of true intellectual independence. To him his mind was his fortune, and he desired no better. We do not find in the stoicism of the Phrygian slave the devout and lofty spiritualism of Plato,—thirsting for God and immortality; it may be doubted whether he believed in immortality at all: but he did recognize what is most noble in human life,—the subservience of the passions to reason, the power of endurance, patience, charity, and disinterested action. He did recognize the necessity of divine aid in the struggles of life, the glory of friendship, the tenderness of compassion, the power of sympathy. His philosophy was human, and it was cheerful; since he did not believe in misfortune, and exalted gentleness and philanthropy. Above everything, he sought inward approval, not the praises of the world,—that happiness which lies within

one's self, in the absence of all ignoble fears, in contentment, in that peace of the mind which can face poverty, disease, exile, and death.

Such were the lofty views which, embodied in the discourses of Epictetus, fell into the hands of Marcus Aurelius in the progress of his education, and exercised such a great influence on his whole subsequent life. The slave became the teacher of the emperor, — which it is impossible to conceive of unless their souls were in harmony. As a Stoic, the emperor would not be less on his throne than the slave in his cottage. The trappings and pomps of imperial state became indifferent to him, since they were external, and were of small moment compared with that high spiritual life which he desired to lead. If poverty and pain were nothing to Epictetus, so grandeur and power and luxury should be nothing to him, — both alike being merely outward things, like the clothes which cover a man. And the fewer the impediments in the march after happiness and truth the better. Does a really great and preoccupied man care what he wears? “A shocking bad hat” was perhaps as indifferent to Gladstone as a dirty old cloak was to Socrates. I suppose if a man is known to be brainless, it is necessary for him to wear a disguise, — even as instinct prompts a frivolous and empty woman to put on jewels. But who expects a person recognized as a philosopher to

use a mental crutch or wear a moral mask? Who expects an old man, compelling attention by his wisdom, to dress like a dandy? It is out of place; it is not even artistic, — it is ridiculous. That only is an evil which shackles the soul. Aurelius aspired to its complete emancipation. Not for the joys of a future heaven did he long, but for the realities and certitudes of earth, — the placidity and harmony and peace of his soul, so long as it was doomed to the trials and temptations of the world, and a world, too, which he did not despise, but which he sought to benefit.

So, what was contentment in the slave became philanthropy in the emperor. He would be a benefactor, not by building baths and theatres, but by promoting peace, prosperity, and virtue. He would endure cheerfully the fatigue of winter campaigns upon the frozen Danube, if the Empire could be saved from violence. To extend its boundaries, like Julius, he cared nothing; but to preserve what he had was a supreme duty. His watchword was duty, — to himself, his country, and God. He lived only for the happiness of his subjects. Benevolence became the law of his life. Self-abnegation destroyed self-indulgence. For what was he placed by Providence in the highest position in the world, except to benefit the world? The happiness of one hundred and twenty millions was greater than the joys of any individual existence. And what were any pleasures

which ended in vanity to the sublime placidity of an emancipated soul? Stoicism, if it did not soar to God and immortality, yet aspired to the freedom and triumph of what is most precious in man. And it equally despised, with haughty scorn, those things which corrupted and degraded this higher nature,—the glorious dignity of unfettered intellect. The accidents of earth were nothing in his eyes,—neither the purple of kings nor the rags of poverty. It was the soul, in its transcendent dignity, which alone was to be preserved and purified.

This was the exalted realism which appears in the “Meditations” of Marcus Aurelius, and which he had learned from the inspirations of a slave. Yet such was the inborn, almost supernatural, loftiness of Aurelius, that, had he been the slave and Epictetus the emperor, the same moral wisdom would have shone in the teachings and life of each; for they both were God’s witnesses of truth in an age of wickedness and shame. It was He who chose them both, and sent them out as teachers of righteousness,—the one from the humblest cottage, the other from the most magnificent palace of the capital of the world. In station they were immeasurably apart; in aim and similarity of ideas they were kindred spirits,—one of the phenomena of the moral history of our race; for the slave, in his physical degradation, had all the freedom and grandeur of an aspiring

soul, and the emperor, on his lofty throne, had all the humility and simplicity of a peasant in the lowliest state of poverty and suffering. Surely circumstances had nothing to do with this marvellous exhibition. It was either the mind and soul triumphant over and superior to all outward circumstances, or it was God imparting an extraordinary moral power.

I believe it was the inscrutable design of the Supreme Governor of the universe to show, perhaps, what lessons of moral wisdom could be taught by men under the most diverse influences and under the greatest contrasts of rank and power, and also to what heights the souls of both slave and king could rise, with His aid, in the most corrupt period of human history. Noah, Abraham, and Moses did not stand more isolated amidst universal wickedness than did the Phrygian slave and the imperial master of the world. And as the piety of Noah could not save the antediluvian empires, as the faith of Abraham could not convert idolatrous nations, as the wisdom of Moses could not prevent the sensualism of emancipated slaves, so the lofty philosophy of Aurelius could not save the Empire which he ruled. And yet the piety of Noah, the faith of Abraham, the wisdom of Moses, and the stoicism of Aurelius have proved alike a spiritual power,—the precious salt which was to preserve humanity from the putrefaction of almost universal selfishness and vice, until the new

revelation should arouse the human soul to a more serious contemplation of its immortal destiny.

The imperial "Meditations" are without art or arrangement, — a sort of diary, valuable solely for their precious thoughts; not lofty soarings in philosophical and religious contemplation, which tax the brain to comprehend, like the thoughts of Pascal, but plain maxims for the daily intercourse of life, showing great purity of character and extraordinary natural piety, blended with pithy moral wisdom and a strong sense of duty. "Men exist for each other: teach them or bear with them," said he. "Benevolence is invincible, if it be not an affected smile." "When thou risest in the morning unwillingly, say, 'I am rising to the work of a human being; why, then, should I be dissatisfied if I am going to do the things for which I was brought into the world?'" "Since it is possible that thou mayest depart from this life this very moment, regulate every act and thought accordingly (. . . for death hangs over thee whilst thou livest), while it is in thy power to be good." "What has become of all great and famous men, and all they desired and loved? They are smoke and ashes, and a tale." "If thou findest in human life anything better than justice, temperance, fortitude, turn to it with all thy soul; but if thou findest anything else smaller (and of no value) than this, give place to nothing else." "Men seek re-

treats for themselves, — houses in the country, sea-shores, and mountains; but it is always in thy power to retire within thyself, for nowhere does a man retire with more quiet or freedom than into his own soul.* Think of such sayings, written down in his diary on the evenings of the very days of battle with the barbarians on the Danube or in Hungarian marshes! Think of a man, O ye Napoleons, ye conquerors, who can thus muse and meditate in his silent tent, and by the light of his solitary lamp, after a day of carnage and of victory! Think of such a man, — not master of a little barbaric island or a half-established throne in a country no bigger than a small province, but the supreme sovereign of a vast empire, at the time of its greatest splendor and prosperity, with no mortal power to keep his will in check, — nothing but the voice within him; nothing but the sense of duty; nothing but the desire of promoting the happiness of others: and this man a Pagan!

But the state of that Empire, with all its prosperity, needed such a man to arise. If anything or anybody could save it, it was that succession of good emperors of whom Marcus Aurelius was the last, in the latter part of the second century. Let us glance, in closing, at the real condition of the Empire at that time. I take leave of the man, — this “laurelled hero and crowned philosopher,” stretching out his hands to the

God he but dimly saw, and yet enunciating moral truths which for wisdom have been surpassed only by the sacred writers of the Bible, to whom the Almighty gave his special inspiration. I turn reluctantly from him to the Empire he governed.

Gibbon says, in his immortal History, "If a man were called to fix the period in the history of the world during which the condition of the human race was most happy and prosperous, he would, without hesitation, name that which elapsed from the death of Domitian to the accession of Commodus."

This is the view that Gibbon takes of the prosperity of the old Roman world under such princes as the Antonines. Niebuhr, however, a greater critic, though not so great an artist, takes a different view; and both are great authorities. If Gibbon meant simply that this period was the happiest and most prosperous during the imperial reigns, he may not have been far from the truth, according to his standpoint of what human happiness consists in,—that external prosperity which was the blessing of the Old Testament, and which Macaulay exalts as proudly as Gibbon before him. There *was* this external prosperity, so far as we know, and we know but little aside from monuments and medals. Even Tacitus shrank from writing contemporaneous history, and the period he could have painted is to us lark, mysterious, and unknown. Still, it is generally

supposed and conceded that the Empire at this time was outwardly splendid and prosperous. Certainly there was a period of peace, when no wars troubled the State but those which were distant, — on the very confines of the Empire, and that with rude barbarians, no more formidable in the eyes of the luxurious citizens of the capital than a revolt of the Sepoys to the eyes of the citizens of London, or Indian raids among the Rocky Mountains to the eyes of the people of New York. And there was the reign of law and order, a most grateful thing to those who had read of the conspiracy of Catiline and the tumults of Clodius, two hundred and fifty years before. And there was doubtless a magnificent material civilization which promised to be eternal, and of which every Roman was proud. There was a centralization of power in the Eternal City such as had never been seen before and has never been seen since, — a solid Empire so large that the Mediterranean, which it enclosed, was a mere central lake, around the vast circuit of whose shores were temples and palaces and villas of unspeakable beauty, and where a busy population pursued unmolested its various trades. There was commerce on every river which empties itself into this vast basin; there were manufactures in every town, and there were agricultural skill and abundance in every province. The plains of Egypt and Mesopotamia rejoiced in the richest harvests of wheat;

the hills of Syria and Gaul, and Spain and Italy, were covered with grape-vines and olives. Italy boasted of fifty kinds of wine, and Gaul produced the same vegetables that are known at the present day. All kinds of fruit were plenty and luscious in every province. There were game-preserves and fish-ponds and groves. There were magnificent roads between all the great cities,—an uninterrupted highway, mostly paved, from York to Jerusalem. The productions of the East were consumed in the West, for ships whitened the sea, bearing their precious gems, and ivory, and spices, and perfumes, and silken fabrics, and carpets, and costly vessels of gold and silver, and variegated marbles; and all the provinces of an empire which extended fifteen hundred miles from north to south and three thousand from east to west were dotted with cities, some of which almost rivalled the imperial capital in size and magnificence. The little island of Rhodes contained twenty-three thousand statues, and Antioch had a street four miles in length, with double colonnades throughout its whole extent. The temple of Ephe-sus covered as much ground as does the cathedral of Cologne, and the library of Alexandria numbered seven hundred thousand volumes. Rome, the proud metropolis, had a diameter of eleven miles, and was forty-five miles in circuit, with a population, according to Lipsius, larger than modern London. It had seventeen thousand pal-

aces, thirty theatres, nine thousand baths, and eleven amphitheatres, — one of which could seat eighty-seven thousand spectators. The gilding of the roof of the capitol cost fifteen millions of our money. The palace of Nero was more extensive than Versailles. The mausoleum of Hadrian became the most formidable fortress of Mediæval times. And then, what gold and silver vessels ornamented every palace, what pictures and statues enriched every room, what costly and gilded and carved furniture was the admiration of every guest, what rich dresses decorated the women who supped at gorgeous tables of solid silver, whose very sandals were ornamented with precious stones, and whose necks were hung with priceless pearls and rubies and diamonds! Paulina wore a pearl which, it is said, cost two hundred and fifty thousand dollars of our money. All the master-pieces of antiquity were collected in this centre of luxury and pride, — all those arts which made Greece immortal, and which we can only copy. What vast structures, ornamented with pillars and marble statues, were crowded together near the Forum and Capitoline Hill! The museums of Italy contain to-day twenty thousand specimens of ancient sculpture, which no modern artist could improve. More than a million of dollars were paid for a single picture for the imperial bed-chamber, — for painting was carried to as great perfection as sculpture.

Such were the arts of the Pagan city, such the material civilization in all the cities; and these cities were guarded by soldiers who were trained to the utmost perfection of military discipline, and presided over by governors as elegant, as polished, and as intelligent as the courtiers of Louis XIV. The genius for war was only equalled by genius for government. How well administered were all the provinces! The Romans spread their laws, their language, and their institutions everywhere without serious opposition. They were great civilizers, as the English have been. "Law" became as great an idea as "glory;" and so perfect was the mechanism of government that the happiness of the people was scarcely affected by the character of the emperors. Jurisprudence, the indigenous science of the Romans, is still studied and adopted for its political wisdom.

Such was the civilization of the Roman world in the time of Marcus Aurelius,—that external grandeur, that outward prosperity, to which Gibbon points with such admiration and pride, and to which he ascribed the highest happiness which the world has ever enjoyed. Far different, probably, would have been the verdict of the good and contemplative emperor who then ruled the civilized world, when he saw the luxury, the pride, the sensuality, the selfishness, the irreligion, the worldliness, which marked all classes; producing

vices too horrible to be even named, and undermining the moral health, and secretly and surely preparing the way for approaching violence and ruin.

What, then, is the reverse of the picture which Gibbon admired? What established facts have we as an offset to these gilded material glories? What should be the true judgment of mankind as to this lauded period?

The historian speaks of peace, and the prosperity which naturally flowed from it in the uninterrupted pursuit of the ordinary occupations of life. This is indisputable. There was the increase of wealth, the enjoyment of security, the absence of fears, and the reign of law. Life and property were guarded. A man could travel from one part of the Empire to the other without fear of robbers or assassins. All these things are great blessings. Materially we have no higher civilization. But with peace and prosperity were idleness, luxury, gambling, dissipation, extravagance, and looseness of morals of which we have no conception, and which no subsequent age of the world has seen. It was the age of most scandalous monopolies, and disproportionate fortunes, and abandonment to the pleasures of sense. Any Roman governor could make a fortune in a year; and his fortune was spent in banquets and fêtes and races and costly wines, and enormous retinues of slaves. The theatres, the chariot

racés, the gladiatorial shows, the circus, and the sports of the amphitheatre were then at their height. The central spring of society was money, since it purchased everything which Epicureanism valued. No dignitary was respected for his office,—only for the salary or gains which his office brought. All professions which were not lucrative gradually fell into disrepute; and provided they were lucrative, it was of no consequence whether or not they were infamous. Dancers, cooks, and play-actors received the highest consideration, since their earnings were large. Scholars, poets, and philosophers—what few there were—pined in attics. Epictetus lived in a miserable cottage with only a straw pallet and a single lamp. Women had no education; and were disgracefully profligate; even the wife of Marcus Aurelius (the daughter of Antoninus Pius) was one of the most abandoned women of the age; notwithstanding all the influence of their teachings and example. Slavery was so great an institution that half of the population were slaves. There were sixty millions of them in the Empire, and they were generally treated with brutal cruelty. The master of Epictetus, himself a scholar and philosopher, broke wantonly the leg of his illustrious slave to see how well he could bear pain. There were no public charities. The poor and miserable and sick were left to perish unheeded and unrelieved. Even the free citizens were fed at the public

expense, not as a charity, but to prevent revolts. About two thousand people owned the whole civilized world, and their fortunes were spent in demoralizing it. What if their palaces were grand, and their villas beautiful, and their dresses magnificent, and their furniture costly, if their lives were spent in ignoble and enervating pleasures, as is generally admitted. There was a low religious life, almost no religion at all, and what there was was degrading by its superstition. Everywhere were seen the rites of magical incantations, the pretended virtue of amulets and charms, soothsayers laughing at their own predictions, — nowhere the worship of the *one God* who created the heaven and the earth, nor even a genuine worship of the Pagan deities, but a general spirit of cynicism and atheism. What does St. Paul say of the Romans when he was a prisoner in the precincts of the imperial palace, and at a time of no greater demoralization? We talk of the glories of jurisprudence; but what was the practical operation of laws when such a harmless man as Paul could be brought to trial, and perhaps execution! What shall we say of the boasted justice, when judgments were rendered on technical points, and generally in favor of those who had the longest purses; so that it was not only expensive to go to law, but so expensive that it was ruinous? What could be hoped of laws, however good, when they were made the channels of extortion, when the occupa-

tion of the Bench itself was the great instrument by which powerful men protected their monopolies? We speak of the glories of art; but art was prostituted to please the lower tastes and inflame the passions. The most costly pictures were hung up in the baths, and were disgracefully indecent. Even literature was directed to the flattery of tyrants and rich men. There was no manly protest from literary men against the increasing vices of society,—not even from the philosophers. Philosophy continually declined, like literature and art. Nothing strikes us more forcibly than the absence of genius in the second century. There was no reward for genius except when it flattered and pandered to what was demoralizing. Who dared to utter manly protests in the Senate? Who discussed the principles of government? Who would venture to utter anything displeasing to the imperial masters of the world? In this age of boundless prosperity, where were the great poets, where the historians, where the writers on political economy, where the moralists? For one hundred years there were scarcely ten eminent men in any department of literature whose writings have come down to us. There was the most marked decay in all branches of knowledge, except in that knowledge which could be utilized for making money. The imperial régime cast a dismal shadow over all the efforts of independent genius, on all lofty aspirations, on all individual free-

dom. Architects, painters, and sculptors there were in abundance, and they were employed and well paid; but where were poets, scholars, sages? — where were politicians even? The great and honored men were the tools of emperors, — the prefects of their guards, the generals of their armies, the architects of their palaces, the purveyors of their banquets. If the emperor happened to be a good administrator of this complicated despotism, he was sustained, like Tiberius, whatever his character. If he was weak or frivolous, he was removed by assassination. It was a government of absolute physical forces, and it is most marvellous that such a man as Marcus Aurelius could have been its representative. And what could he have done with his philosophical inquiries had he not also been a great general and a practical administrator, — a man of business as well as a man of thought?

But I cannot enumerate the evils which coexisted with all the boasted prosperity of the Empire, and which were preparing the way for ruin, — evils so disgraceful and universal that Christianity made no impression at all on society at large, and did not modify a law or remove a single object of scandal. Do you call that state of society prosperous and happy when half of the population was in base bondage to cruel masters; when women generally were degraded and slighted; when money was the object of universal idolatry; when

the only pleasures were in banquets and races and other demoralizing sports; when no value was placed upon the soul, and infinite value on the body; when there was no charity, no compassion, no tenderness; when no poor man could go to law; when no genius was encouraged unless for utilitarian ends; when genius was not even appreciated or understood, still less rewarded; when no man dared to lift up his voice against any crying evil, especially of a political character; when the whole civilized world was fettered, deceived, and mocked, and made to contribute to the power, pleasure, and pride of a single man and the minions upon whom he smiled? Is all this to be overlooked in our estimate of human happiness? Is there nothing to be considered but external glories which appeal to the senses alone? Shall our eyes be diverted from the operation of moral law and the inevitable consequences of its violation? Shall we blind ourselves to the future condition of our families and our country in our estimate of happiness? Shall we ignore, in the dazzling life of a few favored extortioners, monopolists, and successful gamblers all that Christianity points out as the hope and solace and glory of mankind? Not thus would we estimate human felicity. Not thus would Marcus Aurelius, as he cast his sad and prophetic eye down the vistas of succeeding reigns, and saw the future miseries and wars and violence which were the

natural result of egotism and vice, have given his austere judgment on the happiness of his Empire. In all his sweetness and serenity, he penetrated the veil which the eye of the worldly Gibbon could not pierce. *He* declares that "those things which are most valued are empty, rotten, and trifling," — these are his very words; and that the real *life* of the people, even in the days of Trajan, had ceased to exist, — that everything truly precious was lost in the senseless grasp after what can give no true happiness or permanent prosperity.

AUTHORITIES.

THE "Meditations" of Marcus Aurelius; Epictetus should be read in connection. Renan's *Life of Marcus Aurelius*. Farrar's *Seekers after God*. Arnold has also written some interesting things about this emperor. In *Smith's Dictionary* there is an able article. Gibbon says something, but not so much as we could wish. Tillemont, in his *History of the Emperors*, says more. I would also refer my readers to my "Old Roman World," to Sismondi's *Fall of the Roman Empire*, and to Montaigne's treatise on the *Decadence of the Romans*. The original Roman authorities which have come down to us are meagre and few.

CONSTANTINE THE GREAT

A. D. 272-337.

CHRISTIANITY ENTHRONED.

CONSTANTINE THE GREAT.

CHRISTIANITY ENTHRONED.

ONE of the links in the history of civilization is the reign of Constantine, not unworthily called the Great, since it would be difficult to find a greater than he among the Roman emperors, after Julius Cæsar, while his labors were by far more beneficent. A new era began with his illustrious reign, — the triumph of Christianity as the established religion of the crumbling Empire. Under his enlightened protection the Church, persecuted from the time of Nero, and never fashionable or popular, or even powerful as an institution, arose triumphant, defiant, almost militant, with new passions and interests ; ambitious, full of enthusiasm, and with unbounded hope, — a great spiritual power, whose authority even princes and nobles were at last unable to withstand. No longer did the Christians live in catacombs and hiding-places ; no longer did they sing their mournful songs over the bleeding and burning bodies of the saints, but arose in the

majesty of a new and irresistible power, — temporal as well as spiritual, — breathing vengeance on ancient foes, grasping great dignities, seizing the revenues of princes, and proclaiming the sovereignty of their invisible King. In defence of their own doctrines they became fierce, arrogant, dogmatic, contentious, — not with sword in one hand and crucifix in the other, like the warlike popes and bishops of mediæval Europe, but with intense theological hatreds, and austere contempt of those luxuries and pleasures which had demoralized society.

The last great act of Diocletian — one of the ablest and most warlike of the emperors — was an unrelenting and desperate persecution of the Christians, whose religion had been steadily gaining ground for two centuries, in spite of martyrdoms and anathemas; and this was so severe and universal that it seemed to be successful. But he had no sooner retired from the government of the world (A. D. 305) than the faith he supposed he had suppressed forever sprung up with new force, and defied any future attempt to crush it.

The vitality of the new religion had been preserved in ages of unparalleled vices by two things especially, — by martyrdom and by austerities; the one a noble attestation of faith in an age of unbelief, and the other a lofty, almost stoical, disdain of those pleasures which centre in the body.

The martyrs cheerfully and heroically endured physical sufferings in view of the glorious crown of which they were assured in the future world. They lived in the firm conviction of immortality, and that eternal happiness was connected indissolubly with their courage, intrepidity, and patience in bearing testimony to the divine character and mission of Him who had shed his blood for the remission of sins. No sufferings were of any account in comparison with those of Him who died for them. Filled with transports of love for the divine Redeemer, who rescued them from the despair of Paganism, and bound with ties of supreme allegiance to Him as the Conqueror and Saviour of the world, they were ready to meet death in any form for his sake. They had become, by professing Him as their Lord and Sovereign, soldiers of the Cross, ready to endure any sacrifices for his sacred cause.

Thus enthusiasm was kindled in a despairing and unbelieving world. And probably the world never saw, in any age, such devotion and zeal for an invisible power. It was animated by the hope of a glorious immortality, of which Christianity alone, of all ancient religions, inspired a firm conviction. In this future existence were victory and blessedness everlasting, — not to be had unless one was faithful unto death. This sublime faith — this glorious assurance of future happiness, this devotion to an unseen King — made a strong impression on those

who witnessed the physical torments which the sufferers bore with unspeakable triumph. There must be, they thought, something in a religion which could take away the sting of death and rob the grave of its victory. The noble attestation of faith in Jesus did perhaps more than any theological teachings towards the conversion of men to Christianity. And persecution and isolation bound the Christians together in bonds of love and harmony, and kept them from the temptations of life. There was a sort of moral Freemasonry among the despised and neglected followers of Christ, such as has not been seen before or since. They were *in* the world but not *of* the world. They were the precious salt to preserve what was worth preserving in a rapidly dissolving Empire. They formed a new power, which would be triumphant amid the universal destruction of old institutions; for the soul would be saved, and Christianity taught that the soul was everything, — that nothing could be given in exchange for it.

The other influence which seemed to preserve the early Christians from the overwhelming materialism of the times was the asceticism which so early became prevalent. This practice of religious seclusion seemed to arise from the necessities of the times. It was a fierce protest against the luxuries of an enervated age. The passion for dress and ornament, and the indulgence of the appetites and other pleasures which pam-

pered the body, and which were universal, were a hindrance to the enjoyment of that spiritual life which Christianity unfolded. As the soul was immortal and the body was mortal, that which was an impediment to the welfare of what was most precious was early denounced. In order to preserve the soul from the pollution of material pleasures, a strenuous protest was made. Hence that defiance of the pleasures of sense which gave loftiness and independence of character soon became a recognized and cardinal virtue. The Christian stood aloof from the banquets and luxuries which undermined the virtues on which the strength of man is based. The characteristic vices of the Pagan world were unchastity and fondness for the pleasures of the table. To these were added the lesser vices of display and ornaments in dress. From these the Christian fled as fatal enemies to his spiritual elevation. I do not believe it was the ascetic ideas imported from India, such as marked the Brahmins, nor the visionary ideas of the Sufis and the Buddhists, and of other Oriental religionists, which gave the impulse to monastic life and led to the austerities of the Church in the second and third centuries, so much as the practical evils with which every one was conversant, and which were plainly antagonistic to the doctrine that the life is more than meat. The triumph of the mind over the body excited an admiration scarcely less marked than the vol-

untary sacrifice of life to a sacred cause. Asceticism, repulsive in many of its aspects, and even unnatural and inhuman, drew a cordon around the Christians, and separated them from the sensualities of ordinary life. It was a reproof as well as a protest. It attacked Epicureanism in its most vulnerable point. "How hardly shall they who have riches enter into the kingdom of God?" Hence the voluntary poverty, the giving away of inherited wealth to the poor, the extreme simplicity of living, and even retirement from the habitations of men, which marked the more earnest of the new believers. Hence celibacy, and avoidance of the society of women,—all to resist most dangerous temptation. Hence the vows of poverty and chastity which early entered monastic life,—a life favorable to ascetic virtues. These were indeed perverted. Everything good is perverted in this world. Self-expiations, flagellations, sheepskin cloaks, root dinners, repulsive austerities, followed. But these grew out of the noble desire to keep unspotted from the world. And unless this desire had been encouraged by the leaders of the Church, the Christian would soon have been contaminated with the vices of Paganism, especially such as were fashionable,—as is deplorably the case in our modern times, when it is so difficult to draw the line between those who do not and those who do openly profess the Christian faith. It is quite probable that Christianity would not

have triumphed over Paganism, had not Christianity made so strong a protest against those vices and fashions which were peculiar to an Epicurean age and an Epicurean philosophy.

It was at this period, when Christianity was a great spiritual power, that Constantine arose. He was born at Naissus, in Dacia, A. D. 274, his father being a soldier of fortune, and his mother the daughter of an inn-keeper. He was eighteen when his father, Constantius, was promoted by the Emperor Diocletian to the dignity of Cæsar, — a sort of lieutenant-emperor, — and early distinguished himself in the Egyptian and Persian wars. He was thirty-one when he joined his father in Britain, whom he succeeded, soon after, in the imperial dignity. Like Theodosius, he was tall, and majestic in manners; gracious, affable, and accessible, like Julius; prudent, cautious, reticent, like Fabius; insensible to the allurements of pleasure, and incredibly active and bold, like Hannibal, Charlemagne, and Napoleon; a politic man, disposed to ally himself with the rising party. The first few years of his reign, which began in A. D. 306, were devoted to the establishment of his power in Britain, where the flower of the Western army was concentrated, — foreseeing a desperate contest with the five rivals who shared between them the Empire which Diocletian had divided; which division, though

possibly a necessity in those turbulent times, would yet seem to have been an unwise thing, since it led to civil wars and rivalries, and struggles for supremacy. It is a mistake to divide a great empire, unless mechanism is worn out, and a central power is impossible. The tendency of modern civilization is to a union of States, when their language and interests and institutions are identical. Yet Diocletian was wearied and oppressed by the burdens of State, and retired disgusted, dividing the Empire into two parts, the Eastern and Western. But there were subdivisions in consequence, and civil wars; and had the policy of Diocletian been continued, the Empire might have been subdivided, like Charlemagne's, until central power would have been destroyed, as in the Middle Ages. But Constantine aimed at a general union of the East and West once again, partly from the desire of centralization, and partly from ambition. The military career of Constantine for about seventeen years was directed to the establishment of his power in Britain, to the reunion of the Empire, and the subjugation of his colleagues, — a long series of disastrous civil wars. These wars are without poetic interest, — in this respect unlike the wars between Cæsar and Pompey, and that between Octavius and Antony. The wars of Cæsar inaugurated the imperial régime when the Empire was young and in full vigor, and when military discipline was carried to perfection; those of Constantine were

in the latter days of the Empire, when it was impossible to reanimate it, and all things were tending rapidly to dissolution,—an exceedingly gloomy period, when there were neither statesmen nor philosophers nor poets nor men of genius, of historic fame, outside the Church. Therefore I shall not dwell on these uninteresting wars, brought about by the ambition of six different emperors, all of whom were aiming for undivided sovereignty. There were in the West Maximian, the old colleague of Diocletian, who had resigned with him, but who had reassumed the purple; his son, Maxentius, elevated by the Roman Senate and the Prætorian Guard,—a dissolute and imbecile young man, who reigned over Italy; and Constantine, who possessed Gaul and Britain. In the East were Galerius, who had married the daughter of Diocletian, and who was a general of considerable ability; Licinius, who had the province of Illyricum; and Maximin, who reigned over Syria and Egypt.

The first of these emperors who was disposed of was Maximian, the father of Maxentius and father-in-law of Constantine. He was regarded as a usurper, and on the capture of Marseilles, he under pressure of Constantine committed suicide by strangulation, A. D. 310. Galerius did not long survive, being afflicted with a loathsome disease, the result of intemperance and gluttony, and died in his palace in Nicomedia, in Bithynia,

the capital of the Eastern provinces. The next emperor who fell was Maxentius, after a desperate struggle in Italy with Constantine, — whose passage over the Alps, and successive victories at Susa (at the foot of Mont Cenis, on the plains of Turin), at Verona, and Saxa Rubra, nine miles from Rome, from which Maxentius fled, only to perish in the Tiber, remind us of the campaigns of Hannibal and Napoleon. The triumphal arch which the victor erected at Rome to commemorate his victories still remains as a monument of the decline of Art in the fourth century. As a result of the conquest over Maxentius, the Prætorian guards were finally abolished, which gave a fatal blow to the Senate, and left the capital disarmed and exposed to future insults and dangers.

The next emperor who disappeared from the field was Maximin, who had embarked in a civil war with Licinius. He died at Tarsus, after an unsuccessful contest, A.D. 313; and there were left only Licinius and Constantine, — the former of whom reigned in the East and the latter in the West. Scarcely a year elapsed before these two emperors embarked in a bloody contest for the sovereignty of the world. Licinius was beaten, but was allowed the possession of Thrace, Asia Minor, Syria, and Egypt. A hollow reconciliation was made between them, which lasted eight years, during which Constantine was engaged in the defence of his empire from the

hostile attacks of the Goths in Illyricum. He gained great victories over these barbarians, and chased them beyond the Danube. He then turned against Licinius, and the bloody battle of Adrianople, A. D. 323, when three hundred thousand combatants were engaged, followed by a still more bloody one on the heights of Chrysopolis, A. D. 324, made Constantine supreme master of the Empire thirty-seven years after Diocletian had divided his power with Maximian.

The great events of his reign as sole emperor, with enormous prestige as a general, second only to that of Julius Cæsar, were the foundation of Constantinople and the establishment of Christianity as the religion of the Empire.

The ancient Byzantium, which Constantine selected as the new capital of his Empire, had been no considerable city for nearly one thousand years, being founded only ninety-seven years after Rome itself. Yet, notwithstanding its magnificent site, — equally favorable for commerce and dominion, — its advantages were not appreciated until the genius of Constantine selected it as the one place in his vast dominions which combined a central position and capacities for defence against invaders. It was also a healthy locality, being exposed to no malarial poisons, like the "Eternal City." It was delightfully situated, on the confines of Europe and Asia, between the Euxine and the Mediterranean, on

a narrow peninsula washed by the Sea of Marmora and the beautiful harbor called the Golden Horn, inaccessible from Asia except by water, while it could be made impregnable on the west. The narrow waters of the Hellespont and the Bosphorus, the natural gates of the city, could be easily defended against hostile fleets both from the Euxine and the Mediterranean, leaving the Propontis (the deep, well-harbored body of water lying between the two straits, in modern times called the Sea of Marmora) with an inexhaustible supply of fish, and its shores lined with vineyards and gardens. Doubtless this city is more favored by nature for commerce, for safety, and for dominion, than any other spot on the face of the earth; and we cannot wonder that Russia should cast greedy eyes upon it as one of the centres of its rapidly increasing Empire. This beautiful site soon rivalled the old capital of the Empire in riches and population, for Constantine promised great privileges to those who would settle in it; and he ransacked and despoiled the cities of Italy, Greece, and Asia Minor of what was most precious in Art to make his new capital attractive, and to ornament his new palaces, churches, and theatres. In this Grecian city he surrounded himself with Asiatic pomp and ceremonies. He assumed the titles of Eastern monarchs. His palace was served and guarded with a legion of functionaries that made access to his person difficult. He created a new nobil-

ity, and made infinite gradations of rank, perpetuated by the feudal monarchs of Europe. He gave pompous names to his officers, both civil and military, using expressions still in vogue in European courts, like "Your Excellency," "Your Highness," and "Your Majesty," — names which the emperors who had reigned at Rome had uniformly disdained. He cut himself loose from all the traditions of the past, especially all relics of republicanism. He divided the civil government of the Empire into thirteen great dioceses, and these he subdivided into one hundred and sixteen provinces. He separated the civil from the military functions of governors. He installed eunuchs in his palace, to wait upon his person and perform menial offices. He made his chamberlain one of the highest officers of State. He guarded his person by bodies of cavalry and infantry. He clothed himself in imposing robes; elaborately arranged his hair; wore a costly diadem; ornamented his person with gems and pearls, with collars and bracelets. He lived, in short, more like a Heliogabalus than a Trajan or an Aurelian. All traces of popular liberty were effaced. All dignities and honors and offices emanated from him. The Cæsars had been absolute monarchs, but disguised their power. Constantine made an ostentatious display of his. Moreover he increased the burden of taxation throughout the Empire. The last fourteen years of

his reign was a period of apparent prosperity, but the internal strength of the Empire and the character of the emperor sadly degenerated. He became effeminate, and committed crimes which sullied his fame. He executed his oldest son on mere suspicion of crime, and on a charge of infidelity even put to death the wife with whom he had lived for twenty years, and who was the mother of future emperors.

But if he had great faults he had also great virtues. No emperor since Augustus had a more enlightened mind, and no one ever reigned at Rome who, in one important respect, did so much for the cause of civilization. Constantine is most lauded as the friend and promoter of Christianity. It is by his service to the Church that he has won the name of the first Christian emperor. His efforts in behalf of the Church throw into the shade all the glory he won as a general and as a statesman. The real interest of his reign centres in his Christian legislation, and in those theological controversies in which he interfered. With Constantine began the enthronement of Christianity, and for one thousand years what is most vital in European history is connected with Christian institutions and doctrines.

It was when he was marching against Maxentius that his conversion to Christianity took place, A. D. 312, when he was thirty-eight, in the sixth year of his reign. Up to this period he was a zealous Pagan, and made

magnificent offerings to the gods of his ancestors, and erected splendid temples, especially in honor of Apollo. The turn of his mind was religious, or, as we are taught by modern science to say, superstitious. He believed in omens, dreams, visions, and supernatural influences.

Now it was in a very critical period of his campaign against his Pagan rival, on the eve of an important battle, as he was approaching Rome for the first time, filled with awe of its greatness and its recollections, that he saw — or fancied he saw — a little after noon, just above the sun which he worshipped, a bright Cross, with this inscription, *Εν τούτῳ νίκα*, — “In this conquer;” and in the following night, when sleep had overtaken him, he dreamed that Christ appeared to him, and enjoined him to make a banner in the shape of the celestial sign which he had seen. Such is the legend, unhesitatingly received for centuries, yet which modern critics are not disposed to accept as a miracle, although attested by Eusebius, and confirmed by the emperor himself on oath. Whether some supernatural sign really appeared or not, or whether some natural phenomenon appeared in the heavens in the form of an illuminated Cross, it is not worth while to discuss. We know this, however, that if the greatest religious revolution of antiquity was worthy to be announced by special signs and wonders, it was when a Roman emperor of extraordinary force of character declared his intention to acknowledge

and serve the God of the persecuted Christians. The miracle rests on the authority of a single bishop, as sacredly attested by the emperor, in whom he saw no fault; but the fact of the conversion remains as one of the most signal triumphs of Christianity, and the conversion itself was the most noted and important in its results since that of Saul of Tarsus. It may have been from conviction, and it may have been from policy. It may have been merely that he saw, in the vigorous vitality of the Christian principle of devotion to a single Person, a healthier force for the unification of his great empire than in the disintegrating vices of Paganism. But, whatever his motive, his action stirred up the enthusiasm of a body of men which gave the victory of the Milvian Bridge. All that was vital in the Empire was found among the Christians, — already a powerful and rising party, that persecution could not put down. Constantine became the head and leader of this party, whose watchword ever since has been “Conquer,” until all powers and principalities and institutions are brought under the influence of the gospel. So far as we know, no one has ever doubted the sincerity of Constantine. Whatever were his faults, especially that of gluttony, which he was never able to overcome, he was ever afterwards strict and fervent in his devotions. He employed his evenings in the study of the Scriptures, as Marcus Aurelius meditated on the verities of

a spiritual life after the fatigues and dangers of the day. He was not so good a man as was the pious Antoninus, who would, had *he* been converted to Christianity, have given to it a purer and loftier legislation. It may be doubted whether Aurelius would have made popes of bishops, or would have invested metaphysical distinctions in theology with so great an authority. But the magnificent patronage which Constantine gave to the clergy was followed by greater and more enlightened sovereigns than he,—by Theodosius, by Charlemagne, and by Alfred; while the dogmas which were defended by Athanasius with such transcendent ability at the council where the emperor presided in person, formed an anchor to the faith in the long and dreary period when barbarism filled Europe with desolation and fear.

Constantine, as a Roman emperor, exercised the supreme right of legislation,—the highest prerogative of men in power. So that his acts as legislator naturally claim our first notice. His edicts were laws which could not be gainsaid or resisted. They were like the laws of the Medes and Persians, except that they could be repealed or modified.

One of the first things he did after his conversion was to issue an edict of toleration, which secured the Christians from any further persecution,—an act of immeasurable benefit to humanity, yet what any man

would naturally have done in his circumstances. If he could have inaugurated the reign of toleration for all religious opinions, he would have been a still greater benefactor. But it was something to free a persecuted body of believers who had been obliged to hide or suffer for two hundred years. By the edict of Milan, A. D. 313, he secured the revenues as well as the privileges of the Church, and restored to the Christians the lands and houses of which they had been stripped by the persecution of Diocletian. Eight years later he allowed persons to bequeath property to Christian institutions and churches. He assigned in every city an allowance of corn in behalf of charities to the poor. He confirmed the clergy in the right of being tried in their own courts and by their peers, when accused of crime,—a great privilege in the fourth century, but a great abuse in the fourteenth. The arbitration of bishops had the force of positive law, and judges were instructed to execute the episcopal decrees. He transferred to the churches the privilege of sanctuary granted to those fleeing from justice in the Mosaic legislation. He ordained that Sunday should be set apart for religious observances in all the towns and cities of the Empire. He abolished crucifixion as a punishment. He prohibited gladiatorial games. He discouraged slavery, infanticide, and easy divorces. He allowed the people to choose their own ministers, nor did he interfere in the election of bishops.

He exempted the clergy from all services to the State, from all personal taxes, and all municipal duties. He seems to have stood in awe of bishops, and to have treated them with great veneration and respect, giving to them lands and privileges, enriching their churches with ornaments, and securing to the clergy an ample support. So prosperous was the Church under his beneficence, that the average individual income of the eighteen hundred bishops of the Empire has been estimated by Gibbon at three thousand dollars a year, when money was much more valuable than it is in our times.

In addition to his munificent patronage of the clergy, Constantine was himself deeply interested in all theological affairs and discussions. He convened and presided over the celebrated Council of Nicæa, or Nice, as it is usually called, composed of three hundred and eighteen bishops, and of two thousand and forty-eight ecclesiastics of lesser note, listening to their debates and following their suggestions. The Christian world never saw a more imposing spectacle than this great council, which was convened to settle the creed of the Church. It met in a spacious basilica, where the emperor, arrayed in his purple and silk robes, with a diadem of precious jewels on his head, and a voice of gentleness and softness, and an air of supreme majesty, exhorted the assembled theologians to unity and concord.

The vital question discussed by this magnificent and august assembly was metaphysical as well as religious ; yet it was the question of the age, on which everybody talked, in public and in private, and which was deemed of far greater importance than any war or any affair of State. The interest in this subject seems strange to many, in an age when positive science and material interests have so largely crowded out theological discussions. But the doctrine of the Trinity was as vital and important in the eyes of the divines of the fourth century as that of Justification by Faith was to the Germans when they assembled in the great hall of the Electoral palace of Leipsic to hear Luther and Dr. Eck advocate their separate sides.

In the time of Constantine everything pertaining to Christianity and the affairs of the Church became invested with supreme importance. All other subjects and interests were secondary, certainly among the Christians themselves. As redemption is the central point of Christianity, public preaching and teaching had been directed chiefly, at first, to the passion, death, and resurrection of the Saviour of the world. Then came discussions and controversies, naturally, about the person of Christ and his relation to the Godhead. Among the early followers of our Lord there had been no pride of reason and a very simple creed. Least of all did they seek to explain the mysteries of their faith by meta-

physical reasoning. Their doctrines were not brought to the test of philosophy. It was enough for these simple and usually unimportant and unlettered people to accept generally accredited facts. It was enough that Christ had suffered and died for them, in his boundless love, and that their souls would be saved in consequence. And as to doctrines, all they sought to know was what our Lord and his apostles said. Hence there was among them no system of theology, as we understand it, beyond the Apostles' Creed. But in the early part of the second century Justin Martyr, a converted philosopher, devoted much labor to a metaphysical development of the doctrine drawn from the expressions of the Apostle John in reference to the Logos, or Word, as identical with the Son.

In the third century the whole Church was agitated by the questions which grew out of the relations between the Father and the Son. From the person of Christ—so dear to the Church—the discussion naturally passed to the Trinity. Then arose the great Alexandrian school of theology, which attempted to explain and harmonize the revealed truths of the Bible by Grecian dialectics. Hence interminable disputes among divines and scholars, as to whether the Father and the Logos were one; whether the Son was created or uncreated; whether or not he was subordinate to the Father; whether the Father, Son, and Holy Ghost

were distinct, or one in essence. Origen, Clement, and Dionysius were the most famous of the doctors, who discussed these points. All classes of Christians were soon attracted by them. They formed the favorite subjects of conversation, as well as of public teaching. Zeal in discussion created acrimony and partisan animosity. Things were lost sight of, and words alone prevailed. Sects and parties arose. The sublime efforts of such men as Justin and Clement to soar to a knowledge of God were perverted to vain disputations in reference to the relations between the three persons of the Godhead.

Alexandria was the centre of these theological agitations, being then, perhaps, the most intellectual city in the Empire. It was filled with Greek philosophers and scholars and artists, and had the largest library in the world. It had the most famous school of theology, the learned and acute professors of which claimed to make theology a science. Philosophy became wedded to theology, and brought the aid of reason to explain the subjects of faith.

Among the noted theologians of this Christian capital was a presbyter who preached in the principal church. His name was Arius, and he was the most popular preacher of the city. He was a tall, spare man, handsome, eloquent, with a musical voice and earnest manner. He was the idol of fashionable women and

cultivated men. He was also a poet, like Abélard, and popularized his speculations on the Trinity. He was as reproachless in morals as Dr. Channing or Theodore Parker; ascetic in habits and dress; bold, acute, and plausible; but he shocked the orthodox party by such sayings as these: "God was not always Father; once he was not Father; afterwards he became Father." He affirmed, in substance, that the Son was created by the Father, and hence was inferior in power and dignity. He did not deny the Trinity, any more than Abélard did in after times; but his doctrines, pushed out to their logical sequence, were a virtual denial of the divinity of Christ. If he were created, he was a creature, and, of course, not God. A created being cannot be the Supreme Creator. He may be commissioned as a divine and inspired teacher, but he cannot be God himself. Now his bishop, Alexander, maintained that the Son (Logos, or Word) is eternally of the same essence as the Father, uncreated, and therefore equal with the Father. Seeing the foundation of the faith, as generally accepted, undermined, he caused Arius to be deposed by a synod of bishops. But the daring presbyter was not silenced, and obtained powerful and numerous adherents. Men of influence — like Eusebius the historian — tried to compromise the difficulties for the sake of unity; and some looked on the discussion as a war of words, which did not affect sal-

vation. In time the bitterness of the dispute became a scandal. It was deemed disgraceful for Christians to persecute each other for dogmas which could not be settled except by authority, and in the discussion of which metaphysics so strongly entered. Alexander thought otherwise. He regarded the speculations of Arius as heretical, as derogating from the supreme allegiance which was due to Christ. He thought that the very foundations of Christianity were being undermined.

No one was more disturbed by these theological controversies than the Emperor himself. He was a soldier, and not a metaphysician; and, as Emperor, he was Pontifex Maximus,—head of the Church. He hated these contentions between good and learned men. He felt that they compromised the interests of the Church universal, of which he was the protector. Therefore he despatched Hosius, Bishop of Cordova, in Spain,—in whom he had great confidence, who was in fact his ecclesiastical adviser,—to both Alexander and Arius, to bring about a reconciliation. As well reconcile Luther with Dr. Eck, or Pascal with the Jesuits! The divisions widened. The party animosities increased. The Church was rent in twain. Metaphysical divinity destroyed Christian union and charity. So Constantine summoned the first general council in Church history to settle the disputed points, and restore harmony and

unity. It convened at Nicæa, or Nice, in Asia Minor, not far from Constantinople.

Arius, as the author of all the troubles, was of course present at the council. As a presbyter he could speak, but not vote. He was sixty years of age, and in the height of his power and fame, and he was able in debate.

But there was one man in the assembly on whom all eyes were soon riveted as the greatest theologian and logician that had arisen in the Church since the apostolic age. He was archdeacon to the bishop of Alexandria, — a lean, attenuated man, small in stature, with fiery eye, haughty air, and impetuous eloquence. His name was Athanasius, — neither Greek nor Roman, but a Coptic African. He was bitterly opposed to Arius and his doctrines. No one could withstand his fervor and his logic. He was like Bernard at the council of Soissons. He was not a cold, dry, unimpassioned impersonation of mere intellect, like Thomas Aquinas or Calvin, but more like St. Augustine, — another African, warm, religious, profound, with human passions, but lofty soul. He also had that intellectual pride and dogmatism which afterward marked Bossuet. For two months he appealed to the assembly, and presented the consequences of the new heresy. With his slight figure, his commanding intellectual force, his conservative tendencies, his clearness of statement,

his logical exactness and fascinating persuasiveness, he was to churchmen what Alexander Hamilton was to statesmen. He gave a constitution to the Church, and became a theological authority scarcely less than Augustine in the next generation, or Lainez at the Council of Trent.

And the result of the deliberations of that famous council led by Athanasius, — although both Hosius and Eusebius of Cæsarea had more prelatic authority and dignity than he, — was the Nicene Creed. Who can estimate the influence of those formulated doctrines? They have been accepted for fifteen hundred years as the standard of the orthodox faith, in both Catholic and Protestant churches, — not universally accepted, for Arianism still has its advocates, under new names, and probably will have so long as the received doctrines of Christianity are subjected to the test of reason. Outward unity was, however, restored to the Church, both by prelatic and imperial authority, although learned and intellectual men continued to speculate and to doubt. The human mind cannot be chained. But it was a great thing to establish a creed which the Christian world could accept in the rude and ignorant ages which succeeded the destruction of the old civilization. That creed was the anchor of religious faith in the Middle Ages. It is still retained in the liturgies of Christendom.

It is not my province to criticise the Nicene Creed, which is virtually the old Apostles' Creed, with the addition of the Trinity, as defined by Athanasius. The subject is too complicated and metaphysical. It is allied with questions concerning which men have always differed and ever will differ. Although the Alexandrian divines invoked the aid of reason, it is a matter which reason cannot settle. It is a matter to be received, if received at all, as a mystery which is insoluble. It belongs to the realm of faith and authority. And the realms of faith and reason are eternally distinct. As metaphysics cannot solve material phenomena, so reason cannot explain subjects which do not appeal to consciousness. Bacon was a great benefactor when he separated the world of physical Nature from the world of Mind; and Pascal was equally a profound philosopher when he showed that faith could not take cognizance of science, nor science of faith. The blending of distinct realms has ever been attended with scepticism. "Canst thou by searching find out God?" What He has revealed for our acceptance should not be confounded with truths to be settled by inquiry. It is a legitimate yet underrated department of Christian inquiry to establish the authenticity and meaning of texts of Scripture from which deductions are made. If the premises are wrong, confusion and error are the result. We must be sure of the premises on which theological

dogmas are based. If as much time and genius and learning had been expended in unravelling the meaning of Scripture declarations as have been spent in theological deductions and metaphysical distinctions, we should have had a more universally accepted faith. Happily, in our day, the aspirations and ambitions of exact scholarship are more and more directed to the elucidation of the sacred Scriptures of Christianity. Exegesis and philosophy alike appeal to the intellect; but the one can be so aided by learning that the truth can be reached, while the other pushes the inquirer into an unfathomable sea of difficulties. All moral truths are so bounded and involved with other moral truths that they seem to qualify the meaning of each other. Almost any assumed truth in religion, when pushed to its utmost logical sequence, appears to involve absurdities. The "divine justice" of theologians ends, by severe logical sequences, in apparent injustice, and "divine mercy" in the sweeping away of all retribution.

It may not unreasonably be asked, Has not theology attempted too much? Has it solved the truths for the solution of which it borrowed the aid of reason, and has it not often made a religion which is based on deductions and metaphysical distinctions as imperative as a religion based on simple declarations? Has it not appealed to the head, when it should have

appealed to the heart and conscience ; and thus has not religion often been cold and dry and polemical, when it should have been warm, fervent, and simple ? Such seem to have been some of the effects of the Trinitarian controversy between Athanasius and Arius, and their respective followers even to our own times. A belief in the unity of God, as distinguished from polytheism, has been made no more imperative than a belief in the supposed relations between the Father and the Son. The real mission of Christ, to save souls, with all the glorious peace which salvation procures, has often been lost sight of in the covenant supposed to have been made between the Father and the Son. Nothing could exceed the acrimony of the Nicene Fathers in their opposition to those who could not accept their deductions. And the more subtile the distinctions the more violent were the disputes ; until at last religious persecution marked the conduct of Christians towards each other,—as fierce almost as the persecutions they had suffered from the Pagans. And so furious was the strife between those theological disputants, estimable in other respects as were their characters, that even the Emperor Constantine at last lost all patience and banished Athanasius himself to a Gaulish city, after he had promoted him to the great See of Alexandria as a reward for his services to the Church at the Council of Nice. To Constantine the

great episcopal theologian was simply "turbulent," "haughty," "intractable."

With the establishment of the doctrine of the Trinity by the Council of Nice, the interest in the reign of Constantine ceases, although he lived twelve years after it. His great work as a Christian emperor was to unite the Church with the State. He did not elevate the Church above the State; that was the work of the Mediæval Popes. But he gave external dignity to the clergy, of whom he was as great a patron as Charlemagne. He himself was a sort of imperial Pope, attending to things spiritual as well as to things temporal. His generosity to the Church made him an object of universal admiration to prelates and abbots and ecclesiastical writers. In this munificent patronage he doubtless secularized the Church, and gave to the clergy privileges they afterwards abused, especially in the ecclesiastical courts. But when the condition of the Teutonic races in barbaric times is considered, his policy may have proved beneficent. Most historians consider that the elevation of the clergy to an equality with barons promoted order and law, especially in the absence of central governments. If Constantine made a mistake in enriching and exalting the clergy, it was endorsed by Charlemagne and Alfred.

After a prosperous and brilliant reign of thirty-one years, the emperor died in the year 337, in the suburbs

of Nicomedia, which Diocletian had selected as the capital of the East. In great pomp, and amid expressions of universal grief, his body was transferred to the city he had built and called by his name; it was adorned with every symbol of grandeur and power, deposited on a golden bed, and buried in a consecrated church, which was made the sepulchre of the Greek emperors until the city was taken by the Turks. The sacred rite of baptism by which Constantine was united with the visible Church, strange to say, was not administered until within a few days before his death.

No emperor has received more praises than Constantine. He was fortunate in his biographers, who saw nothing to condemn in a prince who made Christianity the established religion of the Empire. If not the greatest, he was one of the greatest, of all the absolute monarchs who controlled the destinies of over one hundred millions of subjects. If not the best of the emperors, he was one of the best, as sovereigns are judged. I do not see in his character any extraordinary magnanimity or elevation of sentiment, or gentleness, or warmth of affection. He had great faults and great virtues, as strong men are apt to have. If he was addicted to the pleasures of the table, he was chaste and continent in his marital relations. He had no mistresses, like Julius Cæsar and Louis XIV. He had a great reverence for the ordinances of the Christian religion. His life, in

the main, was as decorous as it was useful. He was a very successful man, but he was also a very ambitious man; and an ambitious man is apt to be unscrupulous and cruel. Though he had to deal with bigots, he was not himself fanatical. He was tolerant and enlightened. His most striking characteristic was policy. He was one of the most politic sovereigns that ever lived, — like Henry IV. of France, forecasting the future, as well as balancing the present. He could not have decreed such a massacre as that of Thessalonica, or have revoked such an edict as that of Nantes. Nor could he have stooped to such a penance as Ambrose inflicted on Theodosius, or given his conscience to a Father Le Tellier. He tried to do right, not because it was right, like Marcus Aurelius, but because it was wise and expedient; he was a Christian, because he saw that Christianity was a better religion than Paganism, not because he craved a lofty religious life; he was a theologian, after the pattern of Queen Elizabeth, because theological inquiries and disputations were the fashion of the day; but when theologians became rampant and arrogant he put them down, and dictated what they should believe. He was comparatively indifferent to slaughter, else he would not have spent seventeen years of his life in civil war, in order to be himself supreme. He cared little for the traditions of the Empire, else he would not have transferred his capital to the banks of the Bosphorus.

He was more like Peter the Great than like Napoleon I.; yet he was a better man than either, and bestowed more benefits on the world than both together, and is to be classed among the greatest benefactors that ever sat upon the throne.

AUTHORITIES.

THE original authorities of the life of Constantine are Eusebius, Bishop of Cæsarea, his friend and admirer; also Hosius, of Cordova. The ecclesiastical histories of Socrates, Theodoret, Zosimus, and Sozomen are dry, but the best we have of that age. The lives of Athanasius and Arius should be read in connection. Gibbon is very full and exhaustive on this period. So is Tillemont, who was an authority to Gibbon. Milman has written, in his interesting history of the Church, a fine notice of Constantine, and so has Stanley. The German Church histories, especially that of Neander, should be read; also, Cardinal Newman's History of the Arians. I need not remind the reader of the innumerable tracts and treatises on the doctrine of the Trinity. They comprise half the literature of the Middle Ages as well as of the Fathers. In a lecture I can only glance at some of the vital points.

A. D. 347-404.

WOMAN AS FRIEND.

PAULA.

WOMAN AS FRIEND.

THE subject of this lecture is Paula, an illustrious Roman lady of rank and wealth, whose remarkable friendship for Saint Jerome, in the latter part of the fourth century, has made her historical. If to her we do not date the first great change in the social relations of man with woman, yet she is the most memorable example that I can find of that exalted sentiment which Christianity called out in the intercourse of the sexes, and which has done more for the elevation of society than any other sentiment except that of religion itself.

Female friendship, however, must ever have adorned and cheered the world; it naturally springs from the depths of a woman's soul. However dark and dismal society may have been under the withering influences of Paganism, it is probable that glorious instances could be chronicled of the devotion of woman to man and of man to woman, which was not intensified by the passion

of love. Nevertheless, the condition of women in the Pagan world, even with all the influences of civilization, was unfavorable to that sentiment which is such a charm in social life.

The Pagan woman belonged to her husband or her father rather than to herself. As more fully shown in the discussion of Cleopatra, she was universally regarded as inferior to man, and made to be his slave. She was miserably educated; she was secluded from intercourse with strangers; she was shut up in her home; she was given in marriage without her consent; she was guarded by female slaves; she was valued chiefly as a domestic servant, or as an animal to prevent the extinction of families; she was seldom honored; she was doomed to household drudgeries as if she were capable of nothing higher; in short, her lot was hard, because it was unequal, humiliating, and sometimes degrading, making her to be either timorous, frivolous, or artful. Her amusements were trivial, her taste vitiated, her education neglected, her rights violated, her aspirations scorned. The poets represented her as capricious, fickle, and false. She rose only to fall; she lived only to die. She was a victim, a toy, or a slave. Bedizened or burdened, she was either an object of degrading admiration or of cold neglect.

The Jewish women seem to have been more favored and honored than women were in Greece or Rome, even

in the highest periods of their civilization. But in Jewish history woman was the coy maiden, or the vigilant housekeeper, or the ambitious mother, or the intriguing wife, or the obedient daughter, or the patriotic songstress, rather than the sympathetic friend. Though we admire the beautiful Rachel, or the heroic Deborah, or the virtuous Abigail, or the affectionate Ruth, or the fortunate Esther, or the brave Judith, or the generous Shunamite, we do not find in the Rachels and Esthers the hallowed ministrations of the Marys, the Marthas and the Phœbes, until Christianity had developed the virtues of the heart and kindled the loftier sentiments of the soul. Then woman became not merely the gentle nurse and the prudent housewife and the disinterested lover, but a *friend*, an angel of consolation, the equal of man in character, and his superior in the virtues of the heart and soul. It was not till then that she was seen to have those qualities which extort veneration, and call out the deepest sympathy, whenever life is divested of its demoralizing egotisms. The original beatitudes of the Garden of Eden returned, and man awoke from the deep sleep of four thousand years, to discover, with Adam, that woman was a partner for whom he should resign all the other attachments of life; and she became his star of worship and his guardian angel amid the entanglements of sin and cares of toil.

I would not assert that there were not noble exceptions to the frivolities and slaveries to which women were generally doomed in Pagan Greece and Rome. Paganism records the fascinations of famous women who could allure the greatest statesmen and the wisest moralists to their charmed circle of admirers, — of women who united high intellectual culture with physical beauty. It tells us of Artemisia, who erected to her husband a mausoleum which was one of the wonders of the world; of Telesilla, the poetess, who saved Argos by her courage; of Hipparchia, who married a deformed and ugly cynic, in order that she might make attainments in learning and philosophy; of Phantasia, who wrote a poem on the Trojan war, which Homer himself did not disdain to utilize; of Sappho, who invented a new measure in lyric poetry, and who was so highly esteemed that her countrymen stamped their money with her image; of Volumnia, screening Rome from the vengeance of her angry son; of Servilia, parting with her jewels to secure her father's liberty; of Sulpicia, who fled from the luxuries of Rome to be a partner of the exile of her husband; of Hortensia, pleading for justice before the triumvirs in the market-place; of Octavia, protecting the children of her rival Cleopatra; of Lucretia, destroying herself rather than survive the dishonor of her house; of Cornelia, inciting her sons, the Gracchi, to deeds of patriotism; and many

other illustrious women. We read of courage, fortitude, patriotism, conjugal and parental love; but how seldom do we read of those who were capable of an exalted friendship for men, without provoking scandal or exciting rude suspicion? Who among the poets paint friendship without love; who among them extol women, unless they couple with their praises of mental and moral qualities a mention of the delights of sensual charms and of the joys of wine and banquets? Poets represent the sentiments of an age or people; and the poets of Greece and Rome have almost libelled humanity itself by their bitter sarcasms, showing how degraded the condition of woman was under Pagan influences.

Now, I select Paula, to show that friendship—the noblest sentiment in woman—was not common until Christianity had greatly modified the opinions and habits of society; and to illustrate how indissolubly connected this noble sentiment is with the highest triumphs of an emancipating religion. Paula was a highly favored as well as a highly gifted woman. She was a descendant of the Scipios and the Gracchi, and was born A. D. 347, at Rome, ten years after the death of the Great Constantine who enthroned Christianity, but while yet the social forces of the empire were entangled in the meshes of Paganism. She was married at seventeen to Toxotius, of the still more

illustrious Julian family. She lived on Mount Aventine, in great magnificence. She owned, it is said, a whole city in Italy. She was one of the richest women of antiquity, and belonged to the very highest rank of society in an aristocratic age. Until her husband died, she was not distinguished from other Roman ladies of rank, except for the splendor of her palace and the elegance of her life. It seems that she was first won to Christianity by the virtues of the celebrated Marcella, and she hastened to enroll herself, with her five daughters, as pupils of this learned woman, at the same time giving up those habits of luxury which thus far had characterized her, together with most ladies of her class. On her conversion, she distributed to the poor the quarter part of her immense income,—charity being one of the forms which religion took in the early ages of Christianity. Nor was she contented to part with the splendor of her ordinary life. She became a nurse of the miserable and the sick; and when they died she buried them at her own expense. She sought out and relieved distress wherever it was to be found.

But her piety could not escape the asceticism of the age; she lived on bread and a little oil, wasted her body with fastings, dressed like a servant, slept on a mat of straw, covered herself with haircloth, and denied herself the pleasures to which she had been

accustomed; she would not even take a bath. The Catholic historians have unduly magnified these virtues; but it was the type which piety then assumed, arising in part from a too literal interpretation of the injunctions of Christ. We are more enlightened in these times, since modern Christian civilization seeks to solve the problem how far the pleasures of this world may be reconciled with the pleasures of the world to come. But the Christians of the fourth century were more austere, like the original Puritans, and made but little account of pleasures which weaned them from the contemplation of God and divine truth, and chained them to the triumphal car of a material and infidel philosophy. As the great and besetting sin of the Jews before the Captivity was idolatry, which thus was the principal subject of rebuke from the messengers of Omnipotence, — the one thing which the Jews were warned to avoid; as hypocrisy and Pharisaism and a technical and legal piety were the greatest vices to be avoided when Christ began his teachings, — so Epicureanism in life and philosophy was the greatest evil with which the early Christians had to contend, and which the more eminent among them sought to shun, like Athanasius, Basil, and Chrysostom. The asceticism of the early Church was simply the protest against that materialism which was undermining society and preparing the way to ruin: and hence the loftiest type of piety

assumed the form of deadly antagonism to the luxuries and self-indulgence which pervaded every city of the empire.

This antagonism may have been carried too far, even as the Puritan made war on many innocent pleasures; but the spectacle of a self-indulgent and pleasure-seeking Christian was abhorrent to the piety of those saints who controlled the opinions of the Christian world. The world was full of misery and poverty, and it was these evils they sought to relieve. The leaders of Pagan society were abandoned to gains and pleasures, which the Christians would fain rebuke by a lofty self-denial, — even as Stoicism, the noblest remonstrance of the Pagan intellect, had its greatest example in an illustrious Roman emperor, who vainly sought to stem the vices which he saw were preparing the way for the conquests of the barbarians. The historian who does not take cognizance of the great necessities of nations, and of the remedies with which good men seek to meet these necessities, is neither philosophical nor just; and instead of railing at the saints, — so justly venerated and powerful, — because they were austere and ascetic, he should remember that only an indifference to the pleasures and luxuries which were the fatal evils of their day could make a powerful impression even on the masses, and make Christianity stand out in bold

contrast with the fashionable, perverse, and false doctrines which Paganism indorsed. And I venture to predict, that if the increasing and unblushing materialism of our times shall at last call for such scathing rebukes as the Jewish prophets launched against the sin of idolatry, or such as Christ himself employed when he exposed the hollowness of the piety of the men who took the lead in religious instruction in his day, then the loftiest characters—those whose example is most revered—will again disdain and shun a style of life which seriously conflicts with the triumphs of a spiritual Christianity.

Paula was an ascetic Roman matron on her conversion, or else her conversion would then have seemed nominal. But her nature was not austere. She was a woman of great humanity, and distinguished for those generous traits which have endeared Augustine to the heart of the world. Her hospitalities were boundless; her palace was the resort of all who were famous, when they visited the great capital of the empire. Nor did her asceticism extinguish the natural affections of her heart. When one of her daughters died, her grief was as immoderate as that of Bernard on the loss of his brother. The woman was never lost in the saint. Another interesting circumstance was her enjoyment of cultivated society, and even of those literary treasures which imperishable art had bequeathed. She spoke the

Greek language as an English or Russian nobleman speaks French, as a theological student understands German. Her companions were gifted and learned women. Intimately associated with her in Christian labors was Marcella,—a lady who refused the hand of the reigning Consul, and yet, in spite of her duties as a leader of Christian benevolence, so learned that she could explain intricate passages of the Scriptures; versed equally in Greek and Hebrew; and so revered, that, when Rome was taken by the Goths, her splendid palace on Mount Aventine was left unmolested by the barbaric spoliators. Paula was also the friend and companion of Albina and Marcellina, sisters of the great Ambrose, whose father was governor of Gaul. Felicita, Principia, and Feliciana also belonged to her circle,—all of noble birth and great possessions. Her own daughter, Blessella, was married to a descendant of Camillus; and even the illustrious Fabiola, whose life is so charmingly portrayed by Cardinal Wiseman, was also a member of this chosen circle.

It was when Rome was the field of her charities and the scene of her virtues, when she equally blazed as a queen of society and a saint of the most self-sacrificing duties, that Paula fell under the influence of Saint Jerome, at that time secretary of Pope Damasus,—the most austere and the most learned man of Christian antiquity, the great oracle of the Latin Church, sharing

with Augustine the reverence bestowed by succeeding ages, whose translation of the Scriptures into Latin has made him an immortal benefactor. Nor was Jerome a plebeian; he was a man of rank and fortune,—like the more famous of the Fathers,—but gave away his possessions to the poor, as did so many others of his day. Nothing had been spared on his education by his wealthy Illyrian parents. At eighteen he was sent to Rome to complete his studies. He became deeply imbued with classic literature, and was more interested in the great authors of Greece and Rome than in the material glories of the empire. He lived in their ideas so completely, that in after times his acquaintance with even the writings of Cicero was a matter of self-reproach. Disgusted, however, with the pomps and vanities around him, he sought peace in the consolations of Christianity. His ardent nature impelled him to embrace the ascetic doctrines which were so highly esteemed and venerated; he buried himself in the catacombs, and lived like a monk. Then his inquiring nature compelled him to travel for knowledge, and he visited whatever was interesting in Italy, Greece, and Asia Minor, and especially Palestine, finally fixing upon Chalcis, on the confines of Syria, as his abode. There he gave himself up to contemplation and study, and to the writing of letters to all parts of Christendom. These letters and his learned treatises, and especially the fame of his

sanctity, excited so much interest that Pope Damasus summoned him back to Rome to become his counsellor and secretary. More austere than Bossuet or Fénelon at the court of Louis XIV., he was as accomplished, and even more learned than they. They were courtiers; he was a spiritual dictator, ruling, not like Dunstan, by an appeal to superstitious fears, but by learning and sanctity. In his coarse garments he maintained his equality with princes and nobles. To the great he appeared proud and repulsive. To the poor he was affable, gentle, and sympathetic; they thought him as humble as the rich thought him arrogant.

Such a man — so learned and pious, so courtly in his manners, so eloquent in his teachings, so independent and fearless in his spirit, so brilliant in conversation, although tinged with bitterness and sarcasm — became a favorite in those high circles where rank was adorned by piety and culture. The spiritual director became a friend, and his friendship was especially valued by Paula and her illustrious circle. Among those brilliant and religious women he was at home, for by birth and education he was their equal. At the house of Paula he was like Whitefield at the Countess of Huntingdon's, or Michael Angelo in the palace of Vittoria Colonna, — a friend, a teacher, and an oracle.

So, in the midst of a chosen and favored circle did Jerome live, with the bishops and the doctors who

equally sought the exalted privilege of its courtesies and its kindness. And the friendship, based on sympathy with Christian labors, became strengthened every day by mutual appreciation, and by that frank and genial intercourse which can exist only with cultivated and honest people. Those high-born ladies listened to his teachings with enthusiasm, entered into all his schemes, and gave him most generous co-operation; not because his literary successes had been blazed throughout the world, but because, like them, he concealed under his coarse garments and his austere habits an ardent, earnest, eloquent soul, with intense longings after truth, and with noble aspirations to extend that religion which was the only hope of the decaying empire. Like them, he had a boundless contempt for empty and passing pleasures, for all the plaudits of the devotees to fashion; and he appreciated their trials and temptations, and pointed out, with more than fraternal tenderness, those insidious enemies that came in the disguise of angels of light. Only a man of his intuitions could have understood the disinterested generosity of those noble women, and the passionless serenity with which they contemplated the demons they had by grace exorcised; and it was only they, with their more delicate organization and their innate insight, who could have entered upon his sorrows, and penetrated the secrets he did not seek to reveal. He

gave to them his choicest hours, explained to them the mysteries, revealed his own experiences, animated their hopes, removed their stumbling-blocks, encouraged them in missions of charity, ignored their mistakes, gloried in their sacrifices, and held out to them the promised joys of the endless future. In return, they consoled him in disappointment, shared his resentments, exulted in his triumphs, soothed him in his toils, administered to his wants, guarded his infirmities, relieved him from irksome details, and inspired him to exalted labors by increasing his self-respect. Not with empty flatteries, nor idle dalliances, nor frivolous arts did they mutually encourage and assist each other. Sincerity and truthfulness were the first conditions of their holy intercourse, — “the communion of saints,” in which they believed, the sympathies of earth purified by the aspirations of heaven; and neither he nor they were ashamed to feel that such a friendship was more precious than rubies, being sanctioned by apostles and martyrs; nay, without which a Bethany would have been as dreary as the stalls and tables of money-changers in the precincts of the Temple.

A mere worldly life could not have produced such a friendship, for it would have been ostentatious, or prodigal, or vain; allied with sumptuous banquets, with intellectual tournaments, with selfish aims, with foolish presents, with emotions which degenerate into passions

Ennui, disappointment, burdensome obligation, ultimate disgust, are the result of what is based on the finite and the worldly, allied with the gifts which come from a selfish heart, with the urbanities which are equally showered on the evil and on the good, with the graces which sometimes conceal the poison of asps. How unsatisfactory and mournful the friendship between Voltaire and Frederic the Great, with all their brilliant qualities and mutual flatteries! How unmeaning would have been a friendship between Chesterfield and Dr. Johnson, even had the latter stooped to all the arts of sycophancy! The world can only inspire its votaries with its own idolatries. Whatever is born of vanity will end in vanity. "Even in laughter the heart is sorrowful, and the end of that mirth is heaviness." But when we seek in friends that which can perpetually refresh and never satiate,—the counsel which maketh wise, the voice of truth and not the voice of flattery; that which will instruct and never degrade, the influences which banish envy and mistrust,—then there is a precious life in it which survives all change. In the atmosphere of admiration, respect, and sympathy suspicion dies, and base desires pass away for lack of their accustomed nourishment; we see defects through the glass of our own charity, with eyes of love and pity, while all that is beautiful is rendered radiant; a halo surrounds the mortal form, like the glory which mediæ-

val artists aspired to paint in the faces of *Madonnas*, and adoration succeeds to sympathy, since the excellences we admire are akin to the perfections we adore. "The occult elements" and "latent affinities," of which material pursuits never take cognizance, are "influences as potent in adding a charm to labor or repose as dew or air, in the natural world, in giving a tint to flowers or sap to vegetation."

In that charmed circle, in which it would be difficult to say whether Jerome or Paula presided, the æsthetic mission of woman was seen fully,—perhaps for the first time,—which is never recognized when love of admiration, or intellectual hardihood, or frivolous employments, or usurped prerogatives blunt original sensibilities and sap the elements of inward life. Sentiment proved its superiority over all the claims of intellect,—as when Flora Macdonald effected the escape of Charles Stuart after the fatal battle of Culloden, or when Mary poured the spikenard on Jesus' head, and wiped his feet with the hairs of her head. The glory of the mind yielded to the superior radiance of an admiring soul, and equals stood out in each other's eyes as gifted superiors whom it was no sin to venerate. Radiant in the innocence of conscious virtue, capable of appreciating any flights of genius, holding their riches of no account except to feed the hungry and clothe the naked, these friends lived only to repair the evils which unbridled sin inflicted on

mankind, — glorious examples of the support which our frail nature needs, the sun and joy of social life, perpetual benedictions, the sweet rest of a harassed soul.

Strange it is that such a friendship was found in the most corrupt, conventional, luxurious city of the empire. It is not in cities that friendships are supposed to thrive. People in great towns are too pre-occupied, too busy, too distracted to shine in those amenities which require peace and rest and leisure. Bacon quotes the Latin adage, *Magna civitas, magna solitudo*. It is in cities where real solitude dwells, since friends are scattered, "and crowds are not company, and faces are only as a gallery of pictures, and talk but a tinkling cymbal, where there is no love."

The history of Jerome and Paula suggests another reflection, — that the friendship which would have immortalized them, had they not other and higher claims to the remembrance and gratitude of mankind, rarely exists except with equals. There must be sympathy in the outward relations of life, as we are constituted, in order for men and women to understand each other. Friendship is not philanthropy: it is a refined and subtle sentiment which binds hearts together in similar labors and experiences. It must be confessed it is exclusive, esoteric, — a sort of moral freemasonry. Jerome, and the great bishops, and the illustrious ladies to whom

I allude, all belonged to the same social ranks. They spent their leisure hours together, read the same books, and kindled at the same sentiments. In their charmed circle they unbent; indulged, perchance, in ironical sallies on the follies they alike despised. They freed their minds, as Cicero did to Atticus; they said things to each other which they might have hesitated to say in public, or among fools and dunces. I can conceive that those austere people were sometimes even merry and jocose. The ignorant would not have understood their learned allusions; the narrow-minded might have been shocked at the treatment of their shibboleths; the vulgar would have repelled them by coarseness; the sensual would have disgusted them by their lower tastes.

There can be no true harmony among friends when their sensibilities are shocked, or their views are discrepant. How could Jerome or Paula have discoursed with enthusiasm of the fascinations of Eastern travel to those who had no desire to see the sacred places; or of the charms of Grecian literature to those who could talk only in Latin; or of the corrupting music of the poets to people of perverted taste; or of the sublimity of the Hebrew prophets to those who despised the Jews; or of the luxury of charity to those who had no superfluities; or of the beatitudes of the passive virtues to soldiers; or of the mysteries of faith

to speculating rationalists; or of the greatness of the infinite to those who lived in passing events? A Jewish prophet must have seemed a rhapsodist to Athenian critics, and a Grecian philosopher a conceited cynic to a converted fisherman of Galilee,—even as a boastful Darwinite would be repulsive to a believer in the active interference of the moral Governor of the universe. Even Luther might not have admired Michael Angelo, any more than the great artist did the courtiers of Julius II.; and John Knox might have denounced Lord Bacon as a Gallio for advocating moderate measures of reform. The courtly Bossuet would not probably have sympathized with Baxter, even when both discoursed on the eternal gulf between reason and faith. Jesus—the wandering, weary Man of Sorrows—loved Mary and Martha and Lazarus; but Jesus, in the hour of supreme grief, allowed the most spiritual and intellectual of his disciples to lean on his bosom. It was the son of a king whom David cherished with a love surpassing the love of woman. It was to Plato that Socrates communicated his moral wisdom, it was with cultivated youth that Augustine surrounded himself in the gardens of Como; Cæsar walked with Antony, and Cassius with Brutus; it was to Madame de Maintenon that Fénelon poured out the riches of his intellect, and the lofty Saint Cyran opened to Mère Angelique the sorrows of his soul. We associate Aspasia with

Pericles; Cicero with Atticus; Héloïse with Abélard; Hildebrand with the Countess Matilda; Michael Angelo with Vittoria Colonna; Cardinal de Retz with the Duchess de Longueville; Dr. Johnson with Hannah More.

Those who have no friends delight most in the plaudits of a plebeian crowd. A philosopher who associates with the vulgar is neither an oracle nor a guide. A rich man's son who fraternizes with hostlers will not long grace a party of ladies and gentlemen. A politician who shakes hands with the rabble will lose as much in influence as he gains in power. In spite of envy, poets cling to poets and artists to artists. Genius, like a magnet, draws only congenial natures to itself. Had a well-bred and titled fool been admitted into the Turk's-Head Club, he might have been the butt of good-natured irony; but he would have been endured, since gentlemen must live with gentlemen and scholars with scholars, and the rivalries which alienate are not so destructive as the grossness which repels. More genial were the festivities of a feudal castle than any banquet between Jews and Samaritans. Had not Mrs. Thrale been a woman of intellect and sensibility, the hospitalities she extended to Johnson would have been as irksome as the dinners given to Robert Hall by his plebeian parishioners; and had not Mrs. Unwin been as refined as she was sympathetic, she

would never have soothed the morbid melancholy of Cowper, while the attentions of a fussy, fidgety, talkative, busy wife of a London shopkeeper would have driven him absolutely mad, even if her disposition had been as kind as that of Dorcas, and her piety as warm as that of Phoebe. Paula was to Jerome what Arbella Johnson was to John Winthrop, because their tastes, their habits, their associations, and their studies were the same, — they were equals in rank, in culture, and perhaps in intellect.

But I would not give the impression that congenial tastes and habits and associations formed the basis of the holy friendship between Paula and Jerome. The fountain and life of it was that love which radiated from the Cross, — an absorbing desire to extend the religion which saves the world. Without this foundation, their friendship might have been transient, subject to caprice and circumstances, — like the gay intercourse between the wits who assembled at the Hôtel de Rambouillet, or the sentimental affinities which bind together young men at college or young girls at school, when their vows of undying attachment are so often forgotten in the hard struggles or empty vanities of subsequent life. Circumstances and affinities produced those friendships, and circumstances or time dissolved them, — like the merry meetings of Prince Hal and Falstaff: like the companionship of curious or *ennuied*

travellers on the heights of Righi or in the galleries of Florence. The cord which binds together the selfish and the worldly in the quest for pleasure, in the search for gain, in the toil for honors, at a bacchanalian feast, in a Presidential canvass, on a journey to Niagara, — is a rope of sand ; a truth which the experienced know, yet which is so bitter to learn. It is profound philosophy, as well as religious experience, which confirms this solemn truth. The soul can repose only on the certitudes of heaven ; those who are joined together by the gospel feel alike the misery of the fall and the glory of the restoration. The impressive earnestness which overpowers the mind when eternal and momentous truths are the subjects of discourse binds people together with a force of sympathy which cannot be produced by the sublimity of a mountain or the beauty of a picture. And this enables them to bear each other's burdens, and hide each other's faults, and soothe each other's resentments ; to praise without hypocrisy, rebuke without malice, rejoice without envy, and assist without ostentation. This divine sympathy alone can break up selfishness, vanity, and pride. It produces sincerity, truthfulness, disinterestedness, — without which any friendship will die. It is not the remembrance of pleasure which keeps alive a friendship, but the perception of virtues. How can that live which is based on corruption or a falsehood ? Anything sen

sual in friendship passes away, and leaves a residuum of self-reproach, or undermines esteem. That which preserves undying beauty and sacred harmony and celestial glory is wholly based on the spiritual in man, on moral excellence, on the joys of an emancipated soul. It is not easy, in the giddy hours of temptation or folly, to keep this truth in mind, but it can be demonstrated by the experience of every struggling character. The soul that seeks the infinite and imperishable can be firmly knit only to those who live in the realm of adoration, — the adoration of beauty, or truth, or love; and unless a man or woman *does* prefer the infinite to the finite, the permanent to the transient, the true to the false, the incorruptible to the corruptible there is not even the capacity of friendship, unless a low view be taken of it to advance our interests, or enjoy passing pleasures which finally end in bitter disappointments and deep disgusts.

Moreover, there must be in lofty friendship not only congenial tastes, and an aspiration after the imperishable and true, but some common end which both parties strive to secure, and which they love better than they love themselves. Without this common end, friendship might wear itself out, or expend itself in things unworthy of an exalted purpose. Neither brilliant conversation, nor mutual courtesies, nor active sympathies will make social intercourse a perpetual charm. We

tire of everything, at times, except the felicities of a pure and fervid love. But even husband and wife might tire without the common guardianship of children, or kindred zeal in some practical aims which both alike seek to secure; for they are helpmates as well as companions. Much more is it necessary for those who are not tied together in connubial bonds to have some common purpose in education, in philanthropy, in art, in religion. Such was pre-eminently the case with Paula and Jerome. They were equally devoted to a cause which was greater than themselves.

And this was the extension of monastic life, which in their day was the object of boundless veneration. It was fostered by the early Church, indorsed by the authority of sainted doctors and martyrs, and resplendent in the glories of self-sacrifice and religious contemplation. At that time its subtle contradictions were not perceived, nor its practical evils developed. It was not a disappointed old recluse, but a chaste and enthusiastic virgin, rejoicing in poverty and self-denial, jubilant with songs of adoration, seeking the solution of mysteries, wrapt in celestial reveries, yet going forth from dreary cells to feed the hungry and clothe the naked, and still more, to give spiritual consolations to the poor and miserable. It was a great scheme of philanthropy, as well as a haven of rest. It was always sombre in its attire, ascetic in its habits, firm-set in

its dogmas, secluded in its life, narrow in its views, and resolute in its austerities; but its leaders and dignitaries did not entertain under their coarse raiments either ambition, or avarice, or gluttony. They did not live in stately abbeys, nor ride on mules with gilded bridles, nor entertain people of rank and fashion, nor hunt heretics with fire and sword, nor dictate to princes in affairs of state, nor go to the extremes which human administration of even divine institutions tends to develope, especially in the exciting realm of religion. Pagan or Moslem, Jewish or Christian, Catholic or Protestant, the danger is ever present of passions aroused by inflamed consciences, of spiritualities materialized and degraded. But this strange contradiction of glory in debasement and debasement in glory (type of the greatness and littleness of man), was not then matured, but was resplendent with virtues which extort esteem,—chastity, poverty, and obedience, devotion to the miserable, a lofty faith which spurned the finite, an unbounded charity amid the wreck of the dissolving world. As I have before said, it was a protest which perhaps the age demanded. The vow of poverty was a rebuke to that venal and grasping spirit which made riches the end of life; the vow of chastity was the resolution to escape that degrading sensuality which was one of the greatest evils of the times; and the vow of obedience was the recognition of authority amid the disintegra-

tions of society. The monks would show that a cell could be the blessed retreat of learning and philosophy, and that even in a desert the soul could rise triumphant above the privations of the body, to the contemplation of immortal interests.

For this exalted life, as it seemed to the saints of the fourth century, — seclusion from a wicked world, leisure for study and repose, and a state favorable to Christian perfection, — both Paula and Jerome panted: he, that he might be more free to translate the Scriptures and write his commentaries, and to commune with God; she, to minister to his wants, stimulate his labors, enjoy the beatific visions, and set a proud example of the happiness to be enjoyed amid barren rocks or scorching sands. At Rome, Jerome was interrupted, diverted, disgusted. What was a Vanity Fair, a Babel of jargons, a school for scandals, a mart of lies, an arena of passions, an atmosphere of poisons, such as that city was, in spite of wonders of art and trophies of victory and contributions of genius, to a man who loved the certitudes of heaven, and sought to escape from the entangling influences which were a hindrance to his studies and his friendships? And what was Rome to an emancipated woman, who scorned luxuries and demoralizing pleasure, and who was perpetually shocked by the degradation of her sex even amid intoxicating social triumphs, by their devotion to frivolous pleasures,

love of dress and ornament, elaborate hair-dressings, idle gossipings, dangerous dalliances, inglorious pursuits, silly trifles, emptiness, vanity, and sin? "But in the country," writes Jerome, "it is true our bread will be coarse, our drink water, and our vegetables we must raise with our own hands; but sleep will not snatch us from agreeable discourse, nor satiety from the pleasures of study. In the summer the shade of the trees will give us shelter, and in the autumn the falling leaves a place of repose. The fields will be painted with flowers, and amid the warbling of birds we will more cheerfully chant our songs of praise."

So, filled with such desires, and possessing such simplicity of tastes, — an enigma, I grant, to an age like ours, as indeed it may have been to his, — Jerome bade adieu to the honors and luxuries and excitements of the great city (without which even a Cicero languished), and embarked at Ostia, A. D. 385, for those regions consecrated by the sufferings of Christ. Two years afterwards, Paula, with her daughter, joined him at Antioch, and with a numerous party of friends made an extensive tour in the East, previous to a final settlement in Bethlehem. They were everywhere received with the honors usually bestowed on princes and conquerors. At Cyprus, Sidon, Ptolemais, Cæsarea, and Jerusalem these distinguished travellers were entertained by Christian bishops, and crowds pressed forward to receive their

benediction. The Proconsul of Palestine prepared his palace for their reception, and the rulers of every great city besought the honor of a visit. But they did not tarry until they reached the Holy Sepulchre, until they had kissed the stone which covered the remains of the Saviour of the world. Then they continued their journey, ascending the heights of Hebron, visiting the house of Mary and Martha, passing through Samaria, sailing on the lake Tiberias, crossing the brook Cedron, and ascending the Mount of Transfiguration. Nor did they rest with a visit to the sacred places hallowed by associations with kings and prophets and patriarchs. They journeyed into Egypt, and, by the route taken by Joseph and Mary in their flight, entered the sacred schools of Alexandria, visited the cells of Nitria, and stood beside the ruins of the temples of the Pharaohs.

A whole year was thus consumed by this illustrious party, — learning more than they could in ten years from books, since every monument and relic was explained to them by the most learned men on earth. Finally they returned to Bethlehem, the spot which Jerome had selected for his final resting-place, and there Paula built a convent near to the cell of her friend, which she caused to be excavated from the solid rock. It was there that he performed his mighty literary labors, and it was there that his happiest days were spent. Paula was near to supply his simple wants.

and give, with other pious recluses, all the society he required. He lived in a cave, it is true, but in a way afterwards imitated by the penitent heroes of the Fronde in the vale of Chevreuse; and it was not disagreeable to a man sickened with the world, absorbed in literary labors, and whose solitude was relieved by visits from accomplished women and illustrious bishops and scholars. Fabiola, with a splendid train, came from Rome to listen to his wisdom. Not only did he translate the Bible and write commentaries, but he resumed his pious and learned correspondence with devout scholars throughout the Christian world. Nor was he too busy to find time to superintend the studies of Paula in Greek and Hebrew, and read to her his most precious compositions; while she, on her part, controlled a convent, entertained travellers from all parts of the world, and diffused a boundless charity,—for it does not seem that she had parted with the means of benefiting both the poor and the rich.

Nor was this life at Bethlehem without its charms. That beautiful and fertile town,—as it then seems to have been,—shaded with sycamores and olives, luxurious with grapes and figs, abounding in wells of the purest water, enriched with the splendid church that Helena had built, and consecrated by so many associations, from David to the destruction of Jerusalem, was no dull retreat. and presented far more attractions than

did the vale of Port Royal, where Saint Cyran and Arnauld discoursed with the Mère Angelique on the greatness and misery of man ; or the sunny slopes of Cluny, where Peter the Venerable sheltered and consoled the persecuted Abélard. No man can be dull when his faculties are stimulated to their utmost stretch, if he does live in a cell ; but many a man is bored and *ennuied* in a palace, when he abandons himself to luxury and frivolities. It is not to animals, but to angels, that the higher life is given.

Nor during those eighteen years which Paula passed in Bethlehem, or the previous sixteen years at Rome, did ever a scandal rise or a base suspicion exist in reference to the friendship which has made her immortal. There was nothing in it of that Platonic sentimentality which marked the mediæval courts of love ; nor was it like the chivalrous idolatry of flesh and blood bestowed on queens of beauty at a tournament or tilt ; nor was it poetic adoration kindled by the contemplation of ideal excellence, such as Dante saw in his lamented and departed Beatrice ; nor was it mere intellectual admiration which bright and enthusiastic women sometimes feel for those who dazzle their brains, or who enjoy a great *éclat* ; still less was it that impassioned ardor, that wild infatuation, that tempestuous frenzy, that dire unrest, that mad conflict between sense and reason, that sad forgetfulness sometimes of fame

and duty, that reckless defiance of the future, that selfish, exacting, ungovernable, transient impulse which ignores God and law and punishment, treading happiness and heaven beneath the feet, — such as doomed the greatest genius of the Middle Ages to agonies more bitter than scorpions' stings, and shame that made the light of heaven a burden; to futile expiations and undying ignominies. No, it was none of these things, — not even the consecrated endearments of a plighted troth, the sweet rest of trust and hope, in the bliss of which we defy poverty, neglect, and hardship; it was not even this, the highest bliss of earth, but a sentiment perhaps more rare and scarcely less exalted, — that which the apostle recognized in the holy salutation, and which the Gospel chronicles as the highest grace of those who believed in Jesus, the blessed balm of Bethany, the courageous vigilance which watched beside the tomb.

But the time came — as it always must — for the sundering of all earthly ties; austerities and labors accomplished too soon their work. Even saints are not exempted from the penalty of violated physical laws. Pascal died at thirty-seven. Paula lingered to her fifty-seventh year, worn out with cares and vigils. Her death was as serene as her life was lofty; repeating, as she passed away, the aspirations of the prophesying for his eternal home. Not ecstasies, but a serene tranquillity, marked her closing hours. Raising her

finger to her lip, she impressed upon it the sign of the cross, and yielded up her spirit without a groan. And the icy hand of death neither changed the freshness of her countenance nor robbed it of its celestial loveliness; it seemed as if she were in a trance, listening to the music of angelic hosts, and glowing with their boundless love. The Bishop of Jerusalem and the neighboring clergy stood around her bed, and Jerome closed her eyes. For three days numerous choirs of virgins alternated in Greek, Latin, and Syriac their mournful but triumphant chants. Six bishops bore her body to the grave, followed by the clergy of the surrounding country. Jerome wrote her epitaph in Latin, but was too much unnerved to preach her funeral sermon. Inhabitants from all parts of Palestine came to her funeral: the poor showed the garments which they had received from her charity; while the whole multitude, by their sighs and tears, evinced that they had lost a nursing mother. The Church received the sad intelligence of her death with profound grief, and has ever since cherished her memory, and erected shrines and monuments to her honor. In that wonderful painting of Saint Jerome by Domenichino,—perhaps the greatest ornament of the Vatican, next to that miracle of art, the “Transfiguration” of Raphael,—the saint is represented in repulsive aspects as his soul was leaving his body, ministered unto by the faithful Paula. But Jerome survived

his friend for fifteen years, at Bethlehem, still engrossed with those astonishing labors which made him one of the greatest benefactors of the Church, yet austere and bitter, revealing in his sarcastic letters how much he needed the soothing influences of that sister of mercy whom God had removed to the choir of angels, and to whom the Middle Ages looked as an intercessor, like Mary herself, with the Father of all, for the pardon of sin.

But I need not linger on Paula's deeds of fame. We see in her life, pre-eminently, that noble sentiment which was the first development in woman's progress from the time that Christianity snatched her from the pollution of Paganism. She is made capable of friendship for man without sullyng her soul, or giving occasion for reproach. Rare and difficult as this sentiment is, yet her example has proved both its possibility and its radiance. It is the choicest flower which a man finds in the path of his earthly pilgrimage. The coarse-minded interpreter of a woman's soul may pronounce that rash or dangerous in the intercourse of life which seeks to cheer and assist her male associates by an endearing sympathy; but who that has had any great literary or artistic success cannot trace it, in part, to the appreciation and encouragement of those cultivated women who were proud to be his friends? Who that has written poetry that future ages will sing; who has sculptured a marble that seems to live; who

that has declared the saving truths of an unfashionable religion, — has not been stimulated to labor and duty by women with whom he lived in esoteric intimacy, with mutual admiration and respect?

Whatever the heights to which woman is destined to rise, and however exalted the spheres she may learn to fill, she must remember that it was friendship which first distinguished her from Pagan women, and which will ever constitute one of her most peerless charms. Long and dreary has been her progress from the obscurity to which even the Middle Ages doomed her, with all the boasted admiration of chivalry, to her present free and exalted state. She is now recognized to be the equal of man in her intellectual gifts, and is sought out everywhere as teacher and as writer. She may become whatever she pleases, — actress, singer, painter, novelist, poet, or queen of society, sharing with man the great prizes bestowed on genius and learning. But her nature cannot be half developed, her capacities cannot be known, even to herself, until she has learned to mingle with man in the free interchange of those sentiments which keep the soul alive, and which stimulate the noblest powers. Then only does she realize her æsthetic mission. Then only can she rise in the dignity of a guardian angel, an educator of the heart, a dispenser of the blessings by which she would atone for the evil originally brought upon mankind. Now,

to administer this antidote to evil, by which labor is made sweet, and pain assuaged, and courage fortified, and truth made beautiful, and duty sacred, — this is the true mission and destiny of woman. She made a great advance from the pollutions and slaveries of the ancient world when she proved herself, like Paula, capable of a pure and lofty friendship, without becoming entangled in the snares and labyrinths of an earthly love; but she will make a still greater advance when our cynical world shall comprehend that it is not for the gratification of passing vanity, or foolish pleasure, or matrimonial ends that she extends her hand of generous courtesy to man. but that he may be aided by the strength she gives in weakness, encouraged by the smiles she bestows in sympathy, and enlightened by the wisdom she has gained by inspiration.

AUTHORITIES.

Butler's *Lives of the Saints*; Epistles of Saint Jerome; Cave's *Lives of the Fathers*; Dolci's *De Rebus Gestis Hieronymi*; Tillemont's *Ecclesiastical History*; Gibbon's *Decline and Fall*; Neander's *Church History*. See also Henry and Dupin. One must go to the Catholic historians, especially the French, to know the details of the lives of those saints whom the Catholic Church has canonized. Of nothing is Protestant ecclesiastical history more barren than the heroism, sufferings, and struggles of those great characters who adorned the fourth and fifth centuries, as if the early ages of the Church have no interest except to Catholics.

CHRYSOSTOM.

A. D. 347-407.

SACRED ELOQUENCE.

ГОРЬКОЕ ЧЕЛО

В. ГОРЬКОЕ ЧЕЛО

CHRYSOSTOM.

SACRED ELOQUENCE.

THE first great moral force, after martyrdom, which aroused the degenerate people of the old Roman world from the torpor and egotism and sensuality which were preparing the way for violence and ruin, was the Christian pulpit. Sacred eloquence, then, as impersonated in Chrysostom, "the golden-mouthed," will be the subject of this Lecture, for it was by the "foolishness of preaching" that a new spiritual influence went forth to save a dying world. Chrysostom was not, indeed, the first great preacher of the new doctrines which were destined to win such mighty triumphs, but he was the most distinguished of the pulpit orators of the early Church. Yet even he is buried in his magnificent cause. Who can estimate the influence of the pulpit for fifteen hundred years in the various countries of Christendom? Who can grasp the range of its subjects and the dignity of its appeals? In ages even of ignorance and superstition it has been

eloquent with themes of redemption and of a glorious immortality.

Eloquence has ever been admired and honored among all nations, especially among the Greeks. It was the handmaid of music and poetry when the divinity of mind was adored — perhaps with Pagan instincts, but still adored — as a birthright of genius, upon which no material estimate could be placed, since it came from the Gods, like physical beauty, and could neither be bought nor acquired. Long before Christianity declared its inspiring themes and brought peace and hope to oppressed millions, eloquence was a mighty power. But then it was secular and mundane; it pertained to the political and social aspects of States; it belonged to the Forum or the Senate; it was employed to save culprits, to kindle patriotic devotion, or to stimulate the sentiments of freedom and public virtue. Eloquence certainly did not belong to the priest. It was his province to propitiate the Deity with sacrifices, to surround himself with mysteries, to inspire awe by dazzling rites and emblems, to work on the imagination by symbols, splendid dresses, smoking incense, slaughtered beasts, grand temples. He was a man to conjure, not to fascinate; to kindle superstitious fears, not to inspire by thoughts which burn. The gift of tongues was reserved for rhetoricians, politicians, lawyers, and Sophists.

Now Christianity at once seized and appropriated the arts of eloquence as a means of spreading divine truth. Christianity ever has made use of all the arts and gifts and inventions of men to carry out the concealed purposes of the Deity. It was not intended that Christianity should always work by miracles, but also by appeals to the reason and conscience of mankind, and through the truths which had been supernaturally declared,—the required means to accomplish an end. Therefore, she enriched and dignified an art already admired and honored. She carried away in triumph the brightest ornament of the Pagan schools and placed it in the hands of her chosen ministers. So that the Christian pulpit soon began to rival the Forum in an eloquence which may be called artistic,—a natural power of moving men, allied with learning and culture and experience. Young men of family and fortune at last, like Gregory Nazianzen and Basil, prepared themselves in celebrated schools; for eloquence, though a gift, is impotent without study. See the labors of the most accomplished of the orators of Pagan antiquity. It was not enough for an ancient Greek to have natural gifts; he must train himself by the severest culture, mastering all knowledge, and learning how he could best adapt himself to those he designed to move. So when the gospel was left to do its own work on people's hearts, after supernatural influence is supposed to have been

withdrawn, the Christian preachers, especially in the Grecian cities, found it expedient to avail themselves of that culture which the Greeks ever valued, even in degenerate times. Indeed, when has Christianity rejected learning and refinement? Paul, the most successful of the apostles, was also the most accomplished, — even as Moses, the most gifted man among the ancient Jews, was also the most learned. It is a great mistake to suppose that those venerated Fathers, who swayed by their learning and eloquence the Christian world, were merely saints. They were the intellectual giants of their day, living in courts, and associating with the wise, the mighty, and the noble. And nearly all of them were great preachers: Cyprian, Athanasius, Augustine, Ambrose, and even Leo, if they yielded to Origen and Jerome in learning, were yet very polished, cultivated men, accustomed to all the refinements which grace and dignity society.

But the eloquence of these bishops and orators was rendered potent by vastly grander themes than those which had been dwelt upon by Pericles, or Demosthenes, or Cicero, and enlarged by an amazing depth of new subjects, transcending in dignity all and everything on which the ancient orators had discoursed or discussed. The bishop, while he baptized believers, and administered the symbolic bread and wine, also taught the people, explained to them the mysteries, enforced

upon them their duties, appealed to their intellects and hearts and consciences, consoled them in their afflictions, stimulated their hopes, aroused their fears, and kindled their devotions. He plunged fearlessly into every subject which had a bearing on religious life. While he stood before them clad in the robes of priestly office, holding in his hands the consecrated elements which told of their redemption, and offering up to God before the altar prayers in their behalf, he also ascended the pulpit to speak of life and death in all their sublime relations. "There was nothing touching," says Talfourd, "in the instability of fortune, in the fragility of loveliness, in the mutability of mortal friendship, or the decay of systems, nor in the fall of States and empires, which he did not present, to give humiliating ideas of worldly grandeur. Nor was there anything heroic in sacrifice, or grand in conflict, or sublime in danger,—nothing in the loftiness of the soul's aspirations, nothing of the glorious promises of everlasting life, — which he did not dwell upon to stimulate the transported crowds who hung upon his lips. It was his duty and his privilege," continues this eloquent and Christian lawyer, "to dwell on the older history of the world, on the beautiful simplicities of patriarchal life, on the stern and marvellous story of the Hebrews, on the glorious visions of the prophets, on the songs of the inspired melodists, on the countless beauties of the Scriptures, on the character

and teachings and mission of the Saviour. It was his to trace the Spirit of the boundless and the eternal, faintly breathing in every part of the mystic circle of superstition,—unquenched even amidst the most barbarous rites of savage tribes, and in the cold and beautiful shapes of Grecian mould.”

How different this eloquence from that of the expiring nations! Their eloquence is sad, sounding like the tocsin of departed glories, protesting earnestly—but without effect—against those corruptions which it was too late to heal. How touching the eloquence of Demosthenes, pointing out the dangers of the State, and appealing to liberty, when liberty had fled. In vain his impassioned appeals to men insensible to elevated sentiments. He sang the death-song of departed greatness without the possibility of a new creation. He spoke to audiences cultivated indeed, but divided, enervated, embittered, infatuated, incapable of self-sacrifice, among whom liberty was a mere tradition and patriotism a dream; and he spoke in vain. Nor could Cicero—still more accomplished, if not so impassioned—kindle among the degenerate Romans the ancient spirit which had fled when demagogues began their reign. How mournful was the eloquence of this great patriot, this experienced statesman, this wise philosopher, who, in spite of all his weaknesses, was admired and honored by all who spoke the Latin tongue. But had he spoken

with the tongue of an archangel it would have been all the same, on any worldly or political subject. The old sentiments had died out. Faith was extinguished amid universal scepticism and indifference. He had no material to work on. The birthright of ancient heroes had been sold for a mess of pottage, and this he knew; and therefore with his last philippics he bowed his venerable head, and prepared himself for the sword of the executioner, which he accepted as an inevitable necessity.

These great orators appealed to traditions, to sentiments which had passed away, to glories which could not possibly return; and they spoke in vain. All they could do was to utter their manly and noble protests, and die, with the dispiriting and hopeless feeling that the seeds of ruin, planted in a soil of corruption, would soon bear their wretched fruits,—even violence and destruction.

But the orators who preached a new religion of regenerating forces were more cheerful. They knew that these forces would save the world, whatever the depth of ignominy, wretchedness, and despair. Their eloquence was never sad and hopeless, but triumphant, jubilant, overpowering. It kindled the fires of an intense enthusiasm. It kindled an enthusiasm not based on the conquest of the earth, but on the conquests of the soul, on the never-fading glories of immortality, on the ever-increasing power of the kingdom of Christ.

The new orators did not preach liberty, or the glories of material life, or the majesty of man, or even patriotism; but Salvation, — the future destinies of the soul. A new arena of eloquence was entered; a new class of orators arose, who discoursed on subjects of transcending comfort to the poor and miserable. They made political slavery of no account in comparison with the eternal redemption and happiness promised in the future state. The old institutions could not be saved: perhaps the orators did not care to save them; they were not worth saving; they were rotten to the core. But new institutions should arise upon their ruins; creation should succeed destruction; melodious birth-songs should be heard above the despairing death-songs. There should be a new heaven and a new earth, in which should dwell righteousness; and the Prince of Peace — Prophet, Priest, and King — should reign therein forever and ever.

Of the great preachers who appeared in thousands of pulpits in the fourth century, — after Christianity was seated on the throne of the Roman world, and before it had sunk into the eclipse which barbaric spoliations and papal usurpations, and general ignorance, madness, and violence produced, — there was one at Antioch (the seat of the old Greco-Asiatic civilization, alike refined, voluptuous, and intellectual) who was making a mighty

stir and creating a mighty fame. This was Chrysostom, whose name has been a synonym of eloquence for more than fifteen hundred years. His father, named Secundus, was a man of high military rank; his mother, Anthusa, was a woman of rare Christian graces,—as endeared to the Church as Monica, the sainted mother of Augustine; or Nonna, the mother of Gregory Nazianzen. And it is a pleasing fact to record, that most of the great Fathers received the first impulse to their memorable careers from the influence of pious mothers; thereby showing the true destiny and glory of women, as the guardians and instructors of their children, more eager for their salvation than ambitious of worldly distinction. Buried in the blessed sanctities and certitudes of home,—if this can be called a burial,—those Christian women could forego the dangerous fascination of society and the vanity of being enrolled among its leaders. Anthusa so fortified the faith of her yet unconverted son by her wise and affectionate counsels, that she did not fear to intrust him to the teachings of Libanius, the Pagan rhetorician, deeming an accomplished education as great an ornament to a Christian gentleman as were the good principles she had instilled a support in dangerous temptation. Her son John—for that was his baptismal and only name—was trained in all the learning of the schools. and, like so many of the illustrious of our world, made in his youth a wonderful

proficiency. He was precocious, like Cicero, like Abélard, like Pascal, like Pitt, like Macaulay, and Stuart Mill; and like them he panted for distinction and fame. The most common path to greatness for high-born youth, then as now, was the profession of the law. But the practice of this honorable profession did not, unfortunately, at least in Antioch, correspond with its theory. Chrysostom (as we will call him, though he did not receive this appellation until some centuries after his death) was soon disgusted and disappointed with the ordinary avocations of the Forum,—its low standard of virtue, and its diversion of what is ennobling in the pure fountains of natural justice into the turbid and polluted channels of deceit, chicanery, and fraud; its abandonment to usurious calculations and tricks of learned and legalized jugglery, by which the end of law itself was baffled and its advocates alone enriched. But what else could be expected of lawyers in those crays and in that wicked city, or even in any city of the whole Empire, when justice was practically a marketable commodity; when one half of the whole population were slaves; when the circus and the theatre were as necessary as the bath; when only the rich and fortunate were held in honor; when provincial governments were sold to the highest bidder; when effeminate favorites were the grand chamberlains of emperors; when fanatical mobs rendered all order a mockery;

when the greed for money was the master passion of the people; when utility was the watchword of philosophy, and material gains the end and object of education; when public misfortunes were treated with the levity of atheistic science; when private sorrows, miseries, and sufferings had no retreat and no shelter; when conjugal infelicities were scarcely a reproach; when divorces were granted on the most frivolous pretexts; when men became monks from despair of finding women of virtue for wives; and when everything indicated a rapid approach of some grand catastrophe which should mingle, in indiscriminate ruin, the masters and the slaves of a corrupt and prostrate world?

Such was society, and such the signs of the times, when Chrysostom began the practice of the law at Antioch, — perhaps the wickedest city of the whole Empire. His eyes speedily were opened. He could not sleep, for grief and disgust; he could not embark on a profession which then, at least, added to the evils it professed to cure; he began to tremble for his higher interests; he abandoned the Forum forever; he fled as from a city of destruction; he sought solitude, meditation, and prayer, and joined those monks who lived in cells, beyond the precincts of the doomed city. The ardent, the enthusiastic, the cultivated, the conscientious, the lofty Chrysostom fraternized with the visionary inhabitants of the desert, speculated with them on

the mystic theogonies of the East, discoursed with them on the origin of evil, studied with them the Christian mysteries, fasted with them, prayed with them, slept like them on a bed of straw, denied himself his accustomed luxuries, abandoning himself to alternate transports of grief and sublime enthusiasm, now contending with the demons who sought his destruction; then soaring to comprehend the Man-God, — the Word made flesh, the incarnation of the divine Logos, — and the still more subtile questions pertaining to the nature and distinctions of the Trinity.

Such were the forms and modes of his conversion, — somewhat different from the experience of Augustine or of Luther, yet not less real and permanent. Those days were the happiest of his life. He had leisure and he had enthusiasm. He desired neither riches nor honors, but the peace of a forgiven soul. He was a Churchman, yet still more a man; a philosopher without losing his taste for the Bible; a Christian without repudiating the learning of the schools. But the influence of early education, his practical yet speculative intellect, his inextinguishable sympathies, his desire for usefulness, and possibly an unsubdued ambition to exert a greater influence would not allow him wholly to bury himself. He made long visits to the friends and habitations he had left, in order to stimulate their faith, relieve their necessities, and en-

courage them in works of benevolence; leading a life of alternate study and active philanthropy,—learning from the accomplished Diodorus the historical mode of interpreting the Scriptures, and from the profound Theodorus the systems of ancient philosophy. Thus did he train himself for his future labors, and lay the foundation for his future greatness. It was thus he accumulated those intellectual treasures which he afterwards lavished at the imperial court.

But his health at last gave way; and who can wonder? Who can long thrive amid exhausting studies on root dinners and ascetic severities? He was obliged to leave his cave, where he had dwelt six blessed years; and the bishop of Antioch, who knew his merits, pressed him into the active service of the Church, and ordained him deacon,—for the hierarchy of the Church was then established, whatever may have been the original distinctions of the clergy. With these we have nothing to do. But it does not appear that he preached as yet to the people, but performed like other deacons the humble office of reader, leaving to priests and bishops the higher duties of a public teacher. It was impossible, however, for a man of his piety and his gifts, his melodious voice, his extensive learning, and his impressive manners long to remain in a subordinate post. He was accordingly ordained a presbyter, A. D. 381, by Bishop Flavian, in the spacious basilica of Antioch,

and the active labors of his life began at the age of thirty-four.

Many were the priests associated with him in that great central metropolitan church; "but upon him was laid the duty of especially preaching to the people,—the most important function recognized by the early Church. He generally preached twice in the week, on Saturday and Sunday mornings, often at break of day, in consequence of the heat of the sun. And such was his popularity and unrivalled power, that the bishop, it is said, often allowed him to finish what he had himself begun. His listeners would crowd around his pulpit, and even interrupt his teachings by their applause. They were unwearied, though they stood generally beyond an hour. His elocution, his gestures, and his matter were alike enchanting." Like Bernard, his very voice would melt to tears. It was music singing divine philosophy; it was harmony clothing the richest moral wisdom with the most glowing style. Never, since the palmy days of Greece, had her astonishing language been wielded by such a master. He was an artist, if sacred eloquence does not disdain that word. The people were electrified by the invectives of an Athenian orator, and moved by the exhortations of a Christian apostle. In majesty and solemnity the ascetic preacher was a Jewish prophet delivering to kings the unwelcome messages of divine

Omnipotence. In grace of manner and elegance of language he was the persuasive advocate of the ancient Forum; in earnestness and unction he has been rivalled only by Savonarola; in dignity and learning he may remind us of Bossuet; in his simplicity and orthodoxy he was the worthy successor of him who preached at the day of Pentecost. He realized the perfection which sacred eloquence attained, but to which Pagan art has vainly aspired,—a charm and a wonder to both learned and unlearned,—the precursor of the Bourdaloues and Lacordaires of the Roman Catholic Church, but especially the model for “all preachers who set above all worldly wisdom those divine revelations which alone can save the world.”

Everything combined to make Chrysostom the pride and the glory of the ancient Church,—the doctrines which he did not hesitate to proclaim to unwilling ears, and the matchless manner in which he enforced them,—perhaps the most remarkable preacher, on the whole, that ever swayed an audience; uniting all things,—voice, language, figure, passion, learning, taste, art, piety, occasion, motive, prestige, and material to work upon. He left to posterity more than a thousand sermons, and the printed edition of all his works numbers twelve folio volumes. Much as we are inclined to underrate the genius and learning of other days in this our age of more advanced utilities, of progressive and

ever-developing civilization, — when Sabbath-school children know more than sages knew two thousand years ago, and socialistic philanthropists and scientific *savans* could put to blush Moses and Solomon and David, to say nothing of Paul and Peter, and other reputed oracles of the ancient world, inasmuch as they were so weak and credulous as to believe in miracles, and a special Providence, and a personal God,— yet we find in the sermons of Chrysostom, preached even to voluptuous Syrians, no commonplace exhortations, such as we sometimes hear addressed to the thinkers of this generation, when poverty of thought is hidden in pretty expressions, and the waters of life are measured out in tiny gill cups, and even then diluted by weak platitudes to suit the taste of the languid and bedizened and frivolous slaves of society, whose only intellectual struggle is to reconcile the pleasures of material and sensual life with the joys and glories of the world to come. He dwelt, boldly and earnestly, and with masculine power, on the majesty of God and the comparative littleness of man, on moral accountability to Him, on human degeneracy, on the mysterious power of evil, by force of which good people in this dispensation are in a small minority, on the certainty of future retribution; yet also on the never-fading glories of immortality which Christ has brought to light by his sufferings and death, his glorious resurrection and ascension, and

the promised influences of the Holy Spirit. These truths, so solemn and so grand, he preached, not with tricks of rhetoric, but simply and urgently, as an ambassador of Heaven to lost and guilty man. And can you wonder at the effect? When preachers throw themselves on the cardinal truths of Christianity, and preach with earnestness as if they believed them, they carry the people with them, producing a lasting impression, and growing broader and more dignified every day. When they seek novelties, and appeal purely to the intellect, or attempt to be philosophical or learned, they fail, whatever their talents. It is the divine truth which saves, not genius and learning, — especially the masses, and even the learned and rich, when their eyes are opened to the delusions of life.

For twelve years Chrysostom preached at Antioch, the oracle and the friend of all classes whether high or low, rich or poor, so that he became a great moral force, and his fame extended to all parts of the Empire. Senators and generals and governors came to hear his eloquence. And when, to his vast gifts, he added the graces and virtues of the humblest of his flock, — parting with a splendid patrimony to feed the hungry and clothe the naked, utterly despising riches except as a means of usefulness, living most abstemiously, shunning the society of idolaters, indefatigable in labor, accessible to those who needed spiritual consolation, healing dissen-

sions, calming mobs, befriending the persecuted, rebuking sin in high places; a man acquainted with grief in the midst of intoxicating intellectual triumphs, — reverence and love were added to admiration, and no limits could be fixed to the moral influence he exerted.

There are few incidents in his troubled age more impressive than when this great preacher sheltered Antioch from the vengeance of Theodosius. That thoughtless and turbulent city had been disgraced by an outrageous insult to the emperor. A mob, a very common thing in that age, had rebelled against the majesty of the law, and murdered the officers of the Government. The anger of Theodosius knew no bounds, but was fortunately averted by the entreaties of the bishop, and the emperor abstained from inflicting on the guilty city the punishment he afterwards sent upon Thessalonica for a less crime. Moreover the repentance of the people was open and profound. Chrysostom had moved and melted them. It was the season of Lent. Every day the vast church was crowded. The shops were closed; the Forum was deserted; the theatre was shut; the entire day was consumed with public prayers; all pleasures were forsaken; fear and anguish sat on every countenance, as in a Mediæval city after an excommunication. Chrysostom improved the occasion; and perhaps the most remarkable Lenten sermons ever preached, subdued the fierce spirits of

the city, and Antioch was saved. It was certainly a sublime spectacle to see a simple priest, unclothed even with episcopal functions, surrounded for weeks by the entire population of a great city, ready to obey his word, and looking to him alone as their deliverer from temporal calamities, as well as their guide in fleeing from the wrath to come.

And here we have a noted example of the power as well as the dignity of the pulpit,—a power which never passed away even in ages of superstition, never disdained by abbots or prelates or popes in the plenitude of their secular magnificence (as we know from the sermons of Gregory and Bernard); a sacred force even in the hands of monks, as when Savonarola ruled the city of Florence, and Bourdaloue awed the court of France; but a still greater force among the Reformers, like Luther and Knox and Latimer, yea in all the crises and changes of both the Catholic and Protestant churches; and not to be disdained even in our utilitarian times, when from more than two hundred thousand pulpits in various countries of Christendom, every Sunday, there go forth voices, weak or strong, from gifted or from shallow men, urging upon the people their duties, and presenting to them the hopes of the life to come. Oh, what a power is this! How few realize its greatness, as a whole! What a power it is, even in its weaker forms, when the clergy abdicate their

prerogatives and turn themselves into lecturers, or bury themselves in liturgies ! But when they preach without egotism or vanity, scorning sensationalism and vulgarity and cant, and falling back on the great truths which save the world, then sacredness is added to dignity. And especially when the preacher is fearless and earnest, declaring most momentous truths, and to people who respond in their hearts to those truths, who are filled with the same enthusiasm as he is himself, and who catch eagerly his words of life, and follow his directions as if he were indeed a messenger of Jehovah, — then I know of no moral power which can be compared with the pulpit. Worldly men talk of the power of the press, and it is indeed an influence not to be disdained, — it is a great leaven ; but the teachings of its writers, when not superficial, are contradictory, and are often mere echoes of public sentiment in reference to mere passing movements and fashions and politics and spoils. But the declarations of the clergy, for the most part, are all in unison, in all the various churches — Catholic and Protestant, Episcopalian, Presbyterian, Methodist and Baptist — which accept God Almighty as the moral governor of the universe, the great master of our destinies, whose eternal voice speaketh to the conscience of mankind. And hence their teachings, if they are true to their calling, have reference to interests and duties and aspirations and hopes as far re-

moved in importance from mere temporal matters as the heaven is higher than the earth. Oh, what high treason to the deity whom the preacher invokes, what stupidity, what frivolity, what insincerity, what incapacity of realizing what is truly great, when he descends from the lofty themes of salvation and moral accountability, to dwell on the platitudes of æsthetic culture, the beauties and glories of Nature, or the wonders of a material civilization, and then with not half the force of those books and periodicals which are scattered in every hamlet of civilized Europe and America!

Now it was to the glory of Chrysostom that he felt the dignity of his calling and aspired to nothing higher, satisfied with his great vocation,—a vocation which can never be measured by the lustre of a church or the wealth of a congregation. Gregory Nazianzen, whether preaching in his paternal village or in the cathedral of Constantinople, was equally the creator of those opinion-makers who settle the verdicts of men. Augustine, in a little African town, wielded ten times the influence of a bishop of Rome, and his sermons to the people of the town of Hippo furnished a thesaurus of divinity to the clergy for a thousand years.

Nevertheless, Antioch was not great enough to hold such a preacher as Chrysostom. He was summoned by imperial authority to the capital of the Eastern Empire. One of the ministers of Arcadius, the son of the great

Theodosius, had heard him preach, and greatly admired his eloquence, and perhaps craved the excitement of his discourses, — as the people of Rome hankered after the eloquence of Cicero when he was sent into exile. Chrysostom reluctantly resigned his post in a provincial city to become the Patriarch of Constantinople. It was a great change in his outward dignity. His situation as the highest prelate of the East was rarely conferred except on the favorites of emperors, as the episcopal sees of Mediæval Europe were rarely given to men but of noble birth. Yet being forced, as it were, to accept what he did not seek or perhaps desire, he resolved to be true to himself and his master. Scarcely was he consecrated by Theophilus of Alexandria before he launched out his indignant invectives against the patron who had elevated him, the court which admired him, and the imperial family which sustained him. Still the preacher, when raised to the government of the Eastern church, regarding his sphere in the pulpit as the loftiest which mortal genius could fill. He feared no one, and he spared no one. None could rob a man who had parted with a princely fortune for the sake of Christ; none could bribe a man who had no favors to ask, and who could live on a crust of bread; none could silence a man who felt himself to be the minister of divine Omnipotence, and who scattered before his altar the dust of worldly grandeur.

It seems that Chrysostom regarded his first duty, even as the Metropolitan of the East, to preach the gospel. He subordinated the bishop to the preacher. True, he was the almoner of his church and the director of its revenues; but he felt that the church of Christ had a higher vocation for a bishop to fill than to be a good business man. Amid all the distractions of his great office he preached as often and as fervently as he did at Antioch. Though possessed of enormous revenues, he curtailed the expenses of his household, and surrounded himself with the pious and the learned. He lived retired within his palace; he dined alone on simple food, and always at home. The great were displeased that he would not honor with his presence their sumptuous banquets; but rich dinners did not agree with his weak digestion, and perhaps he valued too highly his precious time to waste himself, body and soul, for the enjoyment of even admiring courtiers. His power was not at the dinner-table but in the pulpit, and he feared to weaken the effects of his discourses by the exhibition of weaknesses which nearly every man displays amid the excitements of social intercourse.

Perhaps, however, Chrysostom was too ascetic. Christ dined with publicans and sinners; and a man must unbend somewhere, or he loses the elasticity of his mind, and becomes a formula or a mechanism. The convivial enjoyments of Luther enabled him to bear his burden.

Had Thomas à Becket shown the same humanity as archbishop that he did as chancellor, he might not have quarrelled with his royal master. So Chrysostom might have retained his favor with the court and his see until he died, had he been less austere and censorious. Yet we should remember that the asceticism which is so repulsive to us, and with reason, and which marked the illustrious saints of the fourth century, was simply the protest against the almost universal materialism of the day, — that dreadful moral blight which was undermining society. As luxury and extravagance and material pleasures were the prominent evils of the old Roman world in its decline, it was natural that the protest against these evils should assume the greatest outward antagonism. Luxury and a worldly life were deemed utterly inconsistent with a preacher of righteousness, and were disdained with haughty scorn by the prophets of the Lord, as they were by Elijah and Elisha in the days of Ahab. “What went ye out in the wilderness to see?” said our Lord, with disdainful irony, — “a man clothed in soft raiment? They that wear soft clothing are in king’s houses,” — as much as to say, My prophets, my ministers, rejoice not in such things.

So Chrysostom could never forget that he was a minister of Christ, and was willing to forego the trappings and pleasures of material life sooner than abdicate his position as a spiritual dictator. The secular

historians of our day would call him arrogant, like the courtiers of Arcadius, who detested his plain speaking and his austere piety ; but the poor and unimportant thought him as humble as the rich and great thought him proud. Moreover, he was a foe to idleness, and sent away from court to their distant sees a host of bishops who wished to bask in the sunshine of court favor, or revel in the excitements of a great city ; and they became his enemies. He deposed others for simony, and they became still more hostile. Others again complained that he was inhospitable, since he would not give up his time to everybody, even while he scattered his revenues to the poor. And still others entertained towards him the passion of envy,—that which gives rancor to the *odium theologicum*, that fatal passion which caused Daniel to be cast into the lions' den, and Haman to plot the ruin of Mordecai ; a passion which turns beautiful women into serpents, and learned theologians into fiends. So that even Chrysostom was assailed with danger. Even he was not too high to fall.

The first to turn against the archbishop was the Lord High Chamberlain, — Eutropius, — the minister who had brought him to Constantinople. This vulgar-minded man expected to find in the preacher he had elevated a flatterer and a tool. He was as much deceived as was Henry II. when he made Thomas à Becket archbishop of Canterbury. The rigid and fearless metropolitan, instead

of telling stories at his table and winking at his infamies, openly rebuked his extortions and exposed his robberies. The disappointed minister of Arcadius then bent his energies to compass the ruin of the prelate; but, before he could effect his purpose, he was himself disgraced at court. The army in revolt had demanded his head, and Eutropius fled to the metropolitan church of Saint Sophia. Chrysostom seized the occasion to impress his hearers with the instability of human greatness, and preached a sort of funeral oration for the man before he was dead. As the fallen and wretched minister of the emperor lay crouching in an agony of shame and fear beneath the table of the altar, the preacher burst out: "Oh, vanity of vanities, where is now the glory of this man? Where the splendor of the light which surrounded him; where the jubilee of the multitude which applauded him; where the friends who worshipped his power; where the incense offered to his image? All gone! It was a dream: it has fled like a shadow; it has burst like a bubble! Oh, vanity of vanity of vanities! Write it on all walls and garments and streets and houses: write it on your consciences. Let every one cry aloud to his neighbor, Behold, all is vanity! And thou, O wretched man," turning to the fallen chamberlain, "did I not say unto thee that money is a thankless servant? Said I not that wealth is a most treacherous friend? The theatre, on which thou hast bestowed honor,

has betrayed thee ; the race-course, after devouring thy gains, has sharpened the sword of those whom thou hast labored to amuse. But our sanctuary, which thou hast so often assailed, now opens her bosom to receive thee, and covers thee with her wings."

But even the sacred cathedral did not protect him. He was dragged out and slain.

A more relentless foe now appeared against the prelate, — no less a personage than Theophilus, the very bishop who had consecrated him. Jealousy was the cause, and heresy the pretext, — that most convenient cry of theologians, often indeed just, as when Bernard accused Abélard, and Calvin complained of Servetus ; but oftener, the most effectual way of bringing ruin on a hated man, as when the partisans of Alexander VI. brought Savonarola to the tribunal of the Inquisition. It seems that Theophilus had driven out of Egypt a body of monks because they would not assent to the condemnation of Origen's writings ; and the poor men, not knowing where to go, fled to Constantinople and implored the protection of the Patriarch. He compassionately gave them shelter, and permission to say their prayers in one of his churches. Therefore he was a heretic, like them, — a follower of Origen.

Under common circumstances such an accusation would have been treated with contempt. But, unfortunately, Chrysostom had alienated other bishops also.

Yet their hostility would not have been heeded had not the empress herself, the beautiful and the artful Eudoxia, sided against him. This proud, ambitious, pleasure-seeking, malignant princess — in passion a Jezebel, in policy a Catherine de Medici, in personal fascination a Mary Queen of Scots — hated the archbishop, as Mary hated John Knox, because he had ventured to reprove her levities and follies ; and through her influence (and how great is the influence of a beautiful woman on an irresponsible monarch !) the emperor, a weak man, allowed Theophilus to summon and preside over a council for the trial of Chrysostom. It assembled at a place called the Oaks, in the suburbs of Chalcedon, and was composed entirely of the enemies of the Patriarch. Nothing, however, was said about his heresy : that charge was ridiculous. But he was accused of slandering the clergy — he had called them corrupt ; of having neglected the duties of hospitality, for he dined generally alone ; of having used expressions unbecoming of the house of God, for he was severe and sarcastic ; of having encroached on the jurisdiction of foreign bishops in having shielded a few excommunicated monks ; and of being guilty of high treason, since he had preached against the sins of the empress. On these charges, which he disdained to answer, and before a council which he deemed illegal, he was condemned ; and the emperor accepted the sentence, and sent him into exile.

But the people of Constantinople would not let him go. They drove away his enemies from the city ; they raised a sedition and a seasonable earthquake, as Gibbon might call it, and having excited superstitious fears, the empress caused him to be recalled. His return, of course, was a triumph. The people spread their garments in his way, and conducted him in pomp to his archiepiscopal throne. Sixty bishops assembled and annulled the sentence of the Council of the Oaks. He was now more popular and powerful than before. But not more prudent. For a silver statue of the empress having been erected so near to the cathedral that the games instituted to its honor disturbed the services of the church, the bishop in great indignation ascended the pulpit, and declaimed against female vices. The empress at this was furious, and threatened another council. Chrysostom, still undaunted, then delivered that celebrated sermon, commencing thus: "Again Herodias raves; again she dances; again she demands the head of John in a basin." This defiance, which was regarded as an insult, closed the career of Chrysostom in the capital of the Empire. Both the emperor and empress determined to silence him. A new council was convened, and the Patriarch was accused of violating the canons of the Church. It seems he ventured to preach before he was formally restored, and for this technical offence he was again deposed. No second earthquake or popular sedition

saved him. He had sailed too long against the stream. What genius and what fame can protect a man who mocks or defies the powers that be, whether kings or people? If Socrates could not be endured at Athens, if Cicero was banished from Rome, how could this unarmed priest expect immunity from the possessors of absolute power whom he had offended? It is the fate of prophets to be stoned. The bold expounders of unpalatable truth ever have been martyrs, in some form or other.

But Chrysostom met his fate with fortitude, and the only favor which he asked was to reside in Cyzicus, near Nicomedia. This was refused, and the place of his exile was fixed at Cucusus, — a remote and desolate city amid the ridges of Mount Taurus; a distance of seventy days' journey, which he was compelled to make in the heat of summer.

But he lived to reach this dreary resting-place, and immediately devoted himself to the charms of literary composition and letters to his friends. No murmurs escaped him. He did not languish, as Cicero did in his exile, or even like Thiers in Switzerland. Banishment was not dreaded by a man who disdained the luxuries of a great capital, and who was not ambitious of power and rank. Retirement he had sought, even in his youth, and it was no martyrdom to him so long as he could study, meditate, and write.

So Chrysostom was serene, even cheerful, amid the blasts of a cold and cheerless climate. It was there he

wrote those noble and interesting letters, of which two hundred and forty still remain. Indeed, his influence seemed to increase with his absence from the capital; and this his enemies beheld with the rage which Napoleon felt for Madame de Staël when he had banished her to within forty leagues of Paris. So a fresh order from the Government doomed him to a still more dreary solitude, on the utmost confines of the Roman Empire, on the coast of the Euxine, even the desert of Pityus. But his feeble body could not sustain the fatigues of this second journey. He was worn out with disease, labors, and austerities; and he died at Comono, in Pontus, — near the place where Henry Martin died, — in the sixtieth year of his age, a martyr, like greater men than he.

Nevertheless this martyrdom, and at the hands of a Christian emperor, filled the world with grief. It was only equalled in intensity by the martyrdom of Becket in after ages. The voice of envy was at last hushed; one of the greatest lights of the Church was extinguished forever. Another generation, however, transported his remains to the banks of the Bosphorus, and the emperor — the second Theodosius — himself advanced to receive them as far as Chalcedon, and devoutly kneeling before his coffin, even as Henry II. kneeled at the shrine of Becket, invoked the forgiveness of the departed saint for the injustice and injuries he had received. His bones were interred with extraordinary pomp in the tomb of the apostles, and were afterwards removed to Rome, and

deposited, still later, beneath a marble mausoleum in a chapel of Saint Peter, where they still remain.

Such were the life and death of the greatest pulpit orator of Christian antiquity. And how can I describe his influence? His sermons, indeed, remain; but since we have given up the Fathers to the Catholics, as if they had a better right to them than we, their writings are not so well known as they ought to be, — as they will be, when we become broader in our views and more modest of our own attainments. Few of the Protestant divines, whom we so justly honor, surpassed Chrysostom in the soundness of his theology, and in the learning with which he adorned his sermons. Certainly no one of them has equalled him in his fervid, impassioned, and classic eloquence. He belongs to the Church universal. The great divines of the seventeenth century made him the subject of their admiring study. In the Middle Ages he was one of the great lights of the reviving schools. Jeremy Taylor, not less than Bossuet, acknowledged his matchless services. One of his prayers has entered into the beautiful liturgy of Cranmer. He was a Bernard, a Bourdaloue, and a Whitefield combined, speaking in the language of Pericles, and on themes which Paganism never comprehended and the Middle Ages but imperfectly discussed.

The permanent influence of such a man can only be measured by the dignity and power of the pulpit itself

in all countries and in all ages. So far as pulpit eloquence is an art, its greatest master still speaketh. But greater than his art was the truth which he unfolded and adorned. It is not because he held the most cultivated audiences of his age spell-bound by his eloquence, but because he did not fear to deliver his message, and because he magnified his office, and preached to emperors and princes as if they were ordinary men, and regarded himself as the bearer of most momentous truth, and soared beyond human praises, and forgot himself in his cause, and that cause the salvation of souls, — it is for these things that I most honor him, and believe that his name will be held more and more in reverence, as Christianity becomes more and more the mighty power of the world.

THE JOURNAL OF THE

SAINT AMBROSE.

A. D. 340-397.

EPISCOPAL AUTHORITY.

1911

SAINT AMBROSE.

EPISCOPAL AUTHORITY.

OF the great Fathers, few are dearer to the Church than Ambrose, Archbishop of Milan, both on account of his virtues and the dignity he gave to the episcopal office.

Nearly all the great Fathers were bishops, but I select Ambrose as the representative of their order, because he was more illustrious as a prelate than as a theologian or orator, although he stood high as both. He contributed more than any man who preceded him to raise the power of bishops as one of the controlling agencies of society for more than a thousand years.

The episcopal office, aside from its spiritual aspects, had become a great worldly dignity as early as the fourth century. It gave its possessor rank, power, wealth, — a superb social position, even in the eyes of worldly men. "Make me but bishop of Rome," said a great Pagan general "and I too would become a

Christian." As archbishop of Milan, the second city of Italy, Ambrose found himself one of the highest dignitaries of the Empire.

Whence this great power of bishops? How happened it that the humble ministers of a new and persecuted religion became princes of the earth? What a change from the outward condition of Paul and Peter to that of Ambrose and Leo!

It would be unpleasant to present this subject on controversial and sectarian grounds. Let those people — and they are numerous — who believe in the divine right of bishops, enjoy their opinion; it is not for me to assail them. Let any party in the Church universal advocate the divine institution of their own form of government. But I do not believe that any particular form of government is laid down in the Bible; and yet I admit that church government is as essential and fundamental a matter as a worldly government. Government, then, must be in both Church and State. This is recognized in the Scriptures. No institution or State can live without it. Men are exhorted by apostles to obey it, as a Christian duty. But they do not prescribe the form, — leaving that to be settled by the circumstances of the times, the wants of nations, the exigencies of the religious world. And whatever form of government arises, and is confirmed by the wisest and best men, is to be sustained, is to be obeyed. The people

of Germany recognize imperial authority: it may be the best government for them. England is practically ruled by an aristocracy,—for the House of Commons is virtually as aristocratic in sympathies as the House of Lords. In this country we have a representation of the people, chosen by the people, and ruling for the people. We think this is the best form of government for us,—just now. In Athens there was a pure democracy. Which of these forms of civil government did God appoint?

So in the Church. For four centuries the bishops controlled the infant Church. For ten centuries afterwards the Popes ruled the Christian world, and claimed a divine right. The government of the Church assumed the theocratic form. At the Reformation numerous sects arose, most of them claiming the indorsement of the Scriptures. Some of these sects became very high-church; that is, they based their organization on the supposed authority of the Bible. All these sects are sincere; but they differ, and they have a right to differ. Probably the day never will come when there will be uniformity of opinion on church government, any more than on doctrines in theology.

Now it seems to me that episcopal power arose, like all other powers, from the circumstances of society,—the wants of the age. One thing cannot be disputed, that the early bishop—or presbyter, or elder, whatever

name you choose to call him — was a very humble and unimportant person in the eyes of the world. He lived in no state, in no dignity; he had no wealth, and no social position outside his flock. He preached in an upper chamber or in catacombs. Saint Paul preached at Rome with chains on his arms or legs. The apostles preached to plain people, to common people, and lived sometimes by the work of their own hands. In a century or two, although the Church was still hunted and persecuted, there were nevertheless many converts. These converts contributed from their small means to the support of the poor. At first the deacons, who seem to have been laymen, had charge of this money. Paul was too busy a man himself to serve tables. Gradually there arose the need of a superintendent, or overseer; and that is the meaning of the Greek word *ἐπίσκοπος*, from which we get our term *bishop*. Soon, therefore, the superintendent or bishop of the local church had the control of the public funds, the expenditure of which he directed. This was necessary. As converts multiplied and wealth increased, it became indispensable for the clergy of a city to have a head; this officer became presiding elder, or bishop, — whose great duty, however, was to preach. In another century these bishops had become influential; and when Christianity was established by Constantine as the religion of the Empire, they added power to influence,

for they disbursed great revenues and ruled a large body of inferior clergy. They were looked up to; they became honored and revered; and deserved to be, for they were good men, and some of them learned. Then they sought a warrant for their power outside the circumstances to which they were indebted for their elevation. It was easy to find it. What sect cannot find it? They strained texts of Scripture, — as that great and good man, Moses Stuart, of Andover, in his zeal for the temperance cause, strained texts to prove that the wine of Palestine did not intoxicate.

But whatever were the causes which led to the elevation and ascendancy of bishops, the fact is clear enough that episcopal authority began at an early date; and that bishops were influential in the third century and powerful in the fourth, — a most fortunate thing, as I conceive, for the Church at that time. As early as the third century we read of so great a man as the martyr Cyprian declaring “that bishops had the same rights as apostles, whose successors they were.” In the fourth century, such illustrious men as Eusebius of Emesa, Athanasius of Alexandria, Basil of Cæsarea, Gregory of Nyssa, Martin of Tours, Chrysostom of Constantinople, and Augustine of Hippo, and sundry other great men whose writings swayed the human mind until the Reformation, advocated equally high-church pretensions. The bishops of that day lived in a state of

worldly grandeur, reduced the power of presbyters to a shadow, seated themselves on thrones, surrounded themselves with the insignia of princes, claimed the right of judging in civil matters, multiplied the offices of the Church, and controlled revenues greater than the incomes of senators and patricians. As for the bishoprics of Rome, Constantinople, Alexandria, Antioch, and Milan, they were great governments, and required men of great executive ability to rule them. Preaching gave way to the multiplied duties and cares of an exalted station. A bishop was then not often selected because he could preach well, but because he knew how to govern. Who, even in our times, would think of filling the See of London, although it is Protestant, with a man whose chief merit is in his eloquence? They want a business man for such a post. Eloquence is no objection, but executive ability is the thing most needed.

So Providence imposed great duties on the bishops of the fourth century, especially in large cities; and very able as well as good men were required for this position, equally one of honor and authority.

The See of Milan was then one of the most important in the Empire. It was the seat of imperial government. Valentinian, an able general, bore the sceptre of the West; for the Empire was then divided, — Valentinian ruling the eastern, and his brother Gratian the western,

portion of it, — and, as the Goths were overrunning the civilized world and threatening Italy, Valentinian fixed his seat of government at Milan. It was a turbulent city, disgraced by mobs and religious factions. The Arian party, headed by the Empress Justina, mother of the young emperor, was exceedingly powerful. It was a critical period, and even orthodoxy was in danger of being subverted. I might dwell on the miseries of that period, immediately preceding the fall of the Empire; but all I will say is, that the See of Milan needed a very able, conscientious, and wise prelate.

Hence Ambrose was selected, not by the emperor but by the people, in whom was vested the right of election. He was then governor of that part of Italy now embraced by the archbishoprics of Milan, Turin, Genoa, Ravenna, and Bologna, — the greater part of Lombardy and Sardinia. He belonged to an illustrious Roman family. His father had been prætorian prefect of Gaul, which embraced not only Gaul, but Britain and Africa, — about a third of the Roman Empire. The seat of this great prefecture was Treves; and here Ambrose was born in the year 340. His early days were of course passed in luxury and pomp. On the death of his father he retired to Rome to complete his education, and soon outstripped his noble companions in learning and accomplishments. Such was his character and posi-

tion that he was selected, at the age of thirty-four, for the government of Northern Italy. Nothing eventful marked his rule as governor, except that he was just, humane, and able. Had he continued governor, his name would not have passed down in history; he would have been forgotten like other provincial governors.

But he was destined to a higher sphere and a more exalted position than that of governor of an important province. On the death of Archbishop Auxentius, A. D. 374, the See of Milan became vacant. A great man was required for the archbishopric in that age of factions, heresies, and tumults. The whole city was thrown into the wildest excitement. The emperor wisely declined to interfere with the election. Rival parties could not agree on a candidate. A tumult arose. The governor — Ambrose — proceeded to the cathedral church, where the election was going on, to appease the tumult. His appearance produced a momentary calm, when a little child cried out, "Let Ambrose our governor be our bishop!" That cry was regarded as a voice from heaven, — as the voice of inspiration. The people caught the words, re-echoed the cry, and tumultuously shouted, "Yes! let Ambrose our governor be our bishop!"

And the governor of a great province became archbishop of Milan. This is a very significant fact. It

shows the great dignity and power of the episcopal office at that time: it transcended in influence and power the governorship of a province. It also shows the enormous strides which the Church had made as one of the mighty powers of the world since Constantine, only about sixty years before, had opened to organized Christianity the possibilities of influence. It shows how much more already was thought of a bishop than of a governor.

And what is very remarkable, Ambrose had not even been baptized. He was a layman. There is no evidence that he was a Christian except in name. He had passed through no deep experience such as Augustine did, shortly after this. It was a more remarkable appointment than when Henry II. made his chancellor, Becket, archbishop of Canterbury. Why was Ambrose elevated to that great ecclesiastical post? What had he done for the Church? Did he feel the responsibility of his priestly office? Did he realize that he was raised in his social position, even in the eye of an emperor? Why did he not shrink from such an office, on the grounds of unfitness?

The fact is, as proved by his subsequent administration, he was the ablest man for that post to be found in Italy. He was really the most fitting man. If ever a man was called to be a priest, he was called. He had the confidence of both the emperor and the people.

Such confidence can be based only on transcendent character. He was not selected because he was learned or eloquent, but because he had administrative ability; and because he was just and virtuous.

A great outward change in his life marked his elevation, as in Becket afterwards. As soon as he was baptized, he parted with his princely fortune and scattered it among the poor, like Cyprian and Chrysostom. This was in accordance with one of the great ideas of the early Church, almost impossible to resist. Charity unbounded, allied with poverty, was the great test of practical Christianity. It was far less insisted upon by the Catholic Church in the Middle Ages, and never was recognized by Protestantism at all, not even in theory. Thrift has been one of the watchwords of Protestantism for three hundred years. One of the boasts of Protestantism has been its superior material prosperity. Travellers have harped on the worldly thrift of Protestant countries. The Puritans, full of the Old Testament, like the Jews, rejoiced in an outward prosperity as one of the evidences of the favor of God. The Catholics accuse the Protestants, of not only giving birth to rationalism, in their desire to extend liberality of mind, but of fostering a material life in their ambition to be outwardly prosperous. I make no comment on this fact; I only state it, for everybody knows the accusation to be true, and most people rejoice in it. One

of the chief arguments I used to hear for the observance of public worship was, that it would raise the value of property and improve the temporal condition of the worshippers,—so that temporal thrift was made to be indissolubly connected with public worship. “Go to church, and you will thrive in business. Become a Sabbath-school teacher, and you will gain social position.” Such arguments logically grow out from linking the kingdom of heaven with success in life, and worldly prosperity with the outward performance of religious duties,—all of which may be true, and certainly marks Protestantism, but is somewhat different from the ideas of the Church eighteen hundred years ago. But those were unenlightened times, when men said, “How hardly shall they who have riches enter into the kingdom of God.”

I pass now to consider the services which Ambrose rendered to the Church, and which have given him a name in history.

One of these was the zealous conservation of the truths he received on authority. To guard the purity of the faith was one of the most important functions of a primitive bishop. The last thing the Church would tolerate in one of her overseers was a Galileo in religion. She scorned those philosophical dignitaries who would sit in the seats of Moses and Paul, and use the speculations of the Greeks to build up the orthodox faith. The last thing which a primitive bishop thought of was

to advance against Goliath, not with the sling of David, but with the weapons of Pagan Grecian schools. It was incumbent on the watchman who stood on the walls of Zion, to see that no suspicious enemy entered her hallowed gates. The Church gave to him that trust, and reposed in his fidelity. Now Ambrose was not a great scholar, nor a subtle theologian. Nor was he dexterous in the use of dialectical weapons, like Athanasius, Augustine, or Thomas Aquinas. But he was sufficiently intelligent to know what the authorities declared to be orthodox. He knew that the fashionable speculations about the Trinity were not the doctrines of Paul. He knew that self-expiation was not the expiation of the cross; that the mission of Christ was something more than to set a good example; that faith was not estimation merely; that regeneration was not a mere external change of life; that the Divine government was a perpetual interference to bring good out of evil, even if it were in accordance with natural law. He knew that the boastful philosophy by which some sought to bolster up Christianity was that against which the apostles had warned the faithful. He knew that the Church was attacked in her most vital points, even in doctrines, — for “as a man thinketh, so is he.”

So he fearlessly entered the lists against the heretics, most of whom were enrolled among the Manicheans, Pelagians, and Arians.

The Manicheans were not the most dangerous, but they were the most offensive. Their doctrines were too absurd to gain a lasting foothold in the West. But they made great pretensions to advanced thought, and engrafted on Christianity the speculations of the East as to the origin of evil and the nature of God. They were not only dreamy theosophists, but materialists under the disguise of spiritualism. I shall have more to say of these people in the next Lecture, on Augustine, since one of his great fights was against the Manichean heresy. So I pass them by with only a brief allusion to their opinions.

The Arians were the most powerful and numerous body of heretics, — if I may use the language of historians, — and it was against these that Ambrose chiefly contended. The great battle against them had been fought by Athanasius two generations before; but they had not been put down. Their doctrines extensively prevailed among many of the barbaric chieftains, and the empress herself was an Arian, as well as many distinguished bishops. Ambrose did not deny the great intellectual ability of Arius, nor the purity of his morals; but he saw in his doctrines the virtual denial of Christ's divinity and atonement, and a glorification of the reason, and an exaltation of the will, which rendered special divine grace unnecessary. The Arian controversy, which lasted one hundred years.

and has been repeatedly revived, was not a mere dialectical display, not a war of words, but the most important controversy in which theologians ever enlisted, and the most vital in its logical deductions. Macaulay sneers at the *homoousian* and the *homoiousian*; and when viewed in a technical point of view, it may seem to many frivolous and vain. But the distinctions of the Trinity, which Arius sought to sweep away, are essential to the unity and completeness of the whole scheme of salvation, as held by the Church to have been revealed in the Scriptures; for if Christ is a mere creature of God, — a creation, and not one with Him in essence, — then his death would avail nothing for the efficacy of salvation; or, — to use the language of theologians, who have ever unfortunately blended the declarations and facts of Scripture with dialectical formularies, which are deductions made by reason and logic from accepted truths, yet not so binding as the plain truths themselves, — Christ's death would be insufficient for an infinite redemption. No propitiation of a created being could atone for the sins of all other creatures. Thus by the Arian theory the Christ of the orthodox church was blotted out, and a man was substituted, who was divine only in the matchless purity of his life and the transcendent wisdom of his utterances; so that Christ, logically, was a pattern and teacher, and not a redeemer. Now, historically, everybody knows that for three hundred years Christ was

viewed and worshipped as the Son of God, — a divine, uncreated being, who assumed a mortal form to make an atonement or propitiation for the sins of the world. Hence the doctrines of Arius undermined, so far as they were received, the whole theology of the early Church, and obscured the light of faith itself. I am compelled to say this, if I speak at all of the Arians, which I do historically rather than controversially. If I eliminated theology and political theories and changes from my Lectures altogether, there would be nothing left but commonplace matter.

But Ambrose had powerful enemies to contend with in his defence of the received doctrines of the Church. The Empress Faustina was herself an Arian, and the patroness of the sect. Milan was filled with its defenders, turbulent and insolent under the shield of the court. It was the headquarters of the sect at that time. Arianism was fashionable; and the empress had caused an edict to be passed, in the name of her son Valentinian, by which liberty of conscience and worship was granted to the Arians. She also caused a bishop of her nomination and creed to challenge Ambrose to a public disputation in her palace on the points in question. Now what course did Ambrose pursue? Nothing could be fairer; apparently, than the proposal of the empress, — nothing more just than her demands. We should say that she had enlightened reason on her side, for heresy

can never be exterminated by force, unless the force is overwhelming, — as in the persecution of the Huguenots by Louis XIV., or the slaughter of the Albigenses by Innocent III. or the princes he incited to that cruel act. Ambrose, however, did not regard the edict as suggested by the love of toleration, but as the desire for ascendancy, — as an advanced post to be taken in the conflict, — introductory to the triumph of the Arian doctrines in the West, and which the Arian emperor and his bishops intended should ultimately be the established religion of the Western nations. It was not a fight for toleration, but for ascendancy. Moreover Ambrose saw in Arianism a hostile creed, — a dangerous error, subversive of what is most vital in Christianity. So he determined to make no concessions at all, to give no foothold to the enemy in a desperate fight. The least concession, he thought, would be followed by the demand for new concessions, and would be a cause of rejoicing to his enemies and of humiliation to his friends; and in accordance with the everlasting principles of all successful warfare he resolved to yield not one jot or tittle. The slightest concession was a compromise, and a compromise might lead to defeat. There could be no compromise on such a vital question as the divinity of our Lord. He might have conceded the wisdom of compromise in some quarrel about temporal matters. Had he, as governor of a province, been required to make some concession to con-

quering barbarians, — had he been a modern statesman devising a constitution, a matter of government, — he might have acted differently. A policy about tariffs and revenues, all resting on unsettled principles of political economy, may have been a matter of compromise, — not the fundamental principles of the Christian religion, as declared by inspiration, and which he was bound to accept as they were revealed and declared, whether they could be reconciled with his reason or not. There is great moral grandeur in the conflict of fundamental principles of religion; and there is equal grandeur in the conflict between principles and principalities, between combatants armed with spiritual weapons and combatants armed with the temporal sword, between defenceless priests and powerful emperors, between subjects and the powers that be, between men speaking in the name of God Almighty and men at the head of armies, — the former strong in the invisible power of truth; the latter resplendent with material forces.

Ambrose did not shun the conflict and the danger. Never before had a priest dared to confront an emperor, except to offer up his life as a martyr. Who could resist Cæsar on his own ground? In the approaching conflict we see the precursor of the Hildebrands and the Becketts. One of the claims of Luther as a hero was his open defiance of the Pope, when no person in his condition had ever before ventured on such a step. But a Roman em-

peror, in his own capital, was greater than a distant Pope, especially when the defiant monk was protected by a powerful prince. Ambrose had the exalted merit of being the first to resist his emperor, not as a martyr willing to die for his cause, but as a prelate in a desperate and open fight, — as a prelate seeking to conquer. He was the first notable man to raise the standard of independent spiritual authority. Consider, for a moment, what a tremendous step that was, — how pregnant with future consequences. He was the first of all the heroes of the Church who dared to contend with the temporal powers, not as a man uttering a protest, but as an equal adversary, — as a warrior bent on victory. Therefore has his name great historical importance. I know of no man who equalled him in intrepidity, and in a far-reaching policy. I fancy him looking down the vista of the ages, and deliberately laying the foundation of an arrogant spiritual power. What an example did he set for the popes and bishops of the Middle Ages! Here was a just and equal law, as we should say, — a beneficent law of religious toleration, as it would outwardly appear, — which Ambrose, as a subject of the emperor, was required to obey. True, it was in reference to a spiritual matter, but emperors, from Cæsar downwards, as Pontifex Maximus, had believed it their right and province to meddle in such matters. See what a hand Constantine had in the organization of the Church, even in the discussion of reli-

gious doctrines. He presided at the Council of Nice, where the great subject of discussion was the Trinity. But the Archbishop of Milan dares to say, virtually, to the emperor, "This law-making about our church matters is none of your concern. Christianity has abrogated your power as High Priest. In spiritual things we will not obey you. Your enactments conflict with the divine laws, — higher than yours; and we, in this matter of conscience, defy your authority. We will obey God rather than you." See in this defiance the rise of a new power, — the power of the Middle Ages, — the reign of the clergy.

In the first place, Ambrose refused to take part in a religious disputation held in the palace of his enemy, — in any palace where a monarch sat as umpire. The Church was the true place for a religious controversy, and the umpire, if such were needed, should be a priest and not a layman. The idea of temporal lords settling a disputed point of theology seemed to him preposterous. So, with blended indignation and haughtiness, he declared it was against the usages of the Church for the laity to sit as judges in theological discussions; that in all spiritual matters emperors were subordinate to bishops, not bishops to emperors. Oh, how great is the posthumous influence of original heroes! Contemplate those fiery remonstrances of Ambrose, — the first on record, — when prelates and emperors contended for the

mastery, and you will see why the Archbishop of Milan is so great a favorite of the Catholic Church.

And what was the response of the empress, who ruled in the name of her son, in view of this disobedience and defiance? Chrysostom dared to reprove female vices; he did not rebel against imperial power. But Ambrose raised an issue with his sovereign. And this angry sovereign sent forth her soldiers to eject Ambrose from the city. The haughty and insolent priest should be exiled, should be imprisoned, should die. Shall he be permitted to disobey an imperial command? Where would then be the imperial authority? — a mere shadow in an age of anarchy.

Ambrose did not oppose force by force. His warfare was not carnal, but spiritual. He would not, if he could, have braved the soldiers of the Government by rallying his adherents in the streets. That would have been a mob, a sedition, a rebellion.

But he seeks the shelter of his church, and prays to Almighty God. And his friends and admirers—the people to whom he preached, to whom he is an oracle—also follow him to his sanctuary. The church is crowded with his adherents, but they are unarmed. Their trust is not in the armor of Goliath, nor even in the sling of David, but in that power which protected Daniel in the lions' den. The soldiers are armed, and they surround the spacious basilica, the form which the

church then assumed. And yet though they surround the church in battle array, they dare not force the doors, — they dare not enter. Why? Because the church had become a sacred place. It was consecrated to the worship of Jehovah. The soldiers were afraid of the wrath of God more than of the wrath of Faustina or Valentinian. What do you see in this fact? You see how religious ideas had permeated the minds even of soldiers. They were not strong enough or brave enough to fight the ideas of their age. Why did not the troops of Louis XVI. defend the Bastille? They were strong enough; its cannon could have demolished the whole Faubourg St. Antoine. Alas! the soldiers who defended that fortress had caught the ideas of the people. They fraternized with them, rather than with the Government; they were afraid of opposing the ideas which shook France to its centre. So the soldiers of the imperial government at Milan, converted to the ideas of Christianity, or sympathizing with them, or afraid of them, dared not assail the church to which Ambrose fled for refuge. Behold in this fact the majestic power of ideas when they reach the people.

But if the soldiers dared not attack Ambrose and his followers in a consecrated place, they might starve him out, or frighten him into a surrender. At this point appears the intrepidity of the Christian hero. Day after day, and night after night, the bishop maintained

his post. The time was spent in religious exercises. The people listened to exhortation; they prayed; they sang psalms. Then was instituted, amid that long-protracted religious meeting that beautiful antiphonal chant of Ambrose, which afterwards, modified and simplified by Pope Gregory, became the great attraction of religious worship in all the cathedrals and abbeys and churches of Europe for more than one thousand years. It was true congregational singing, in which all took part; simple and religious as the songs of Methodists, both to drive away fear and ennui, and fortify the soul by inspiring melodies, — not artistic music borrowed from the opera and oratorio, and sung by four people, in a distant loft, for the amusement of the rich pew-holders of a fashionable congregation, and calculated to make it forget the truths which the preacher has declared; but more like the hymns and anthems of the son of Jesse, when sung by the whole synagogue, making the vaulted roof and lofty pillars of the Mediæval church re-echo the pæans of the transported worshippers.

At last there were signs of rebellion among the soldiers. The new spiritual power was felt, even among them. They were tired of their work; they hated it, since Ambrose was the representative of ideas that claimed obedience no less than the temporal powers. The spiritual and temporal powers were, in fact, ar-

rayed against each other, — an unarmed clergy, declaring principles, against an armed soldiery with swords and lances. What an unequal fight! Why, the very weapons of the soldier are in defence of ideas! The soldier himself is very strong in defence of universally recognized principles, like law and government, whose servant he is. In the case of Ambrose, it was the supposed law of God against the laws of man. What soldier dares to fight against Omnipotence, if he believes at all in the God to whom he is as personally responsible as he is to a ruler?

Ambrose thus remained the victor. The empress was defeated. But she was a woman, and had persistency; she had no intention of succumbing to a priest, and that priest her subject. With subtle dexterity she would change the mode of attack, not relinquish the fight. She sought to compromise. She promised to molest Ambrose no more if he would allow *one* church for the Arians. If the powerful metropolitan would concede that, he might return to his palace in safety; she would withdraw the soldiers. But this he refused. Not one church, declared he, should the detractors of our Lord possess in the city over which he presided as bishop. The Government might take his revenues, might take his life; but he would be true to his cause. With his last breath he would defend the Church, and the doctrines on which it rested.

The angry empress then renewed her attack more fiercely. She commanded the troops to seize by force one of the churches of the city for the use of the Arians; and the bishop was celebrating the sacred mysteries on Palm Sunday when news was brought to him of this outrage,—of this encroachment on the episcopal authority. The whole city was thrown into confusion. Every man armed himself; some siding with the empress, and others with the bishop. The magistrates were in despair, since they could not maintain law and order. They appealed to Ambrose to yield for the sake of peace and public order. To whom he replied, in substance, "What is that to me? My kingdom is not of this world. I will not interfere in civil matters. The responsibility of maintaining order in the streets does not rest on me, but on you. See you to that. It is only by prayer that I am strong."

Again the furious empress—baffled, not conquered—ordered the soldiers to seize the person of Ambrose in his church. But they were terror-stricken. Seize the minister at the altar of Omnipotence! It was not to be thought of. They refused to obey. They sent word to the imperial palace that they would only take possession of the church on the sole condition that the emperor (who was controlled by his mother) should abandon Arianism. How angry must have been the Court! Soldiers not only disobedient, but audaciously dictating

in matters of religion! But this treason on the part of the defenders of the throne was a very serious matter. The Court now became alarmed in its turn. And this alarm was increased when the officers of the palace sided with the bishop. "I perceive," said the crest-fallen and defeated monarch, and in words of bitterness, "that I am only the shadow of an emperor, to whom you dare dictate my religious belief."

Valentinian was at last aroused to a sense of his danger. He might be dragged from his throne and assassinated. He saw that his throne was undermined by a priest, who used only these simple words, "It is my duty to obey God rather than man." A rebellious mob, an indignant court, a superstitious soldiery, and angry factions compelled him to recall his guards. It was a great triumph for the archbishop. Face to face he had defeated the emperor. The temporal power had yielded to the spiritual. Six hundred years before Henry IV. stooped to beg the favor and forgiveness of Hildebrand, at the fortress of Canossa, the State had conceded the supremacy of the Church in the person of the fearless Ambrose.

Not only was Ambrose an intrepid champion of the Church and the orthodox faith, but he was often sent, in critical crises, as an ambassador to the barbaric courts. Such was the force and dignity of his personal character. This is one of the first examples on record

of a priest being employed by kings in the difficult art of negotiation in State matters; but it became very common in the Middle Ages for prelates and abbots to be ambassadors of princes, since they were not only the most powerful but most intelligent and learned personages of their times. They had, moreover, the most tact and the most agreeable manners.

When Maximus revolted against the feeble Gratian (emperor of the West), subdued his forces, took his life, and established himself in Gaul, Spain, and Britain, the Emperor Valentinian sent Ambrose to the barbarian's court to demand the body of his murdered brother. Arriving at Treves, the seat of the prefecture, where his father had been governor, he repaired at once to the palace of the usurper, and demanded an interview with Maximus. The lord chamberlain informed him he could only be heard before council. Led to the council chamber, the usurper arose to give him the accustomed kiss of salutation among the Teutonic kings. But Ambrose refused it, and upbraided the potentate for compelling him to appear in the council chamber. "But," replied Maximus, "on a former mission you came to this chamber." "True," replied the prelate, "but then I came to sue for peace, as a suppliant; now I come to demand, as an equal, the body of Gratian." "An equal, are you?" replied the usurper: "from whom have you received this rank?" "From

God Almighty," replied the prelate, "who preserves to Valentinian the empire he has given him." On this, the angry Maximus threatened the life of the ambassador, who, rising in wrath, in his turn thus addressed him, before all his councillors: "Since you have robbed an anointed prince of his throne, at least restore his ashes to his kindred. Do *you* fear a tumult when the soldiers shall see the dead body of their murdered emperor? What have you to fear from a corpse whose death you ordered? Do you say you only destroyed your enemy? Alas! he was not *your* enemy, but you were *his*. If some one had possessed himself of your provinces, as you seized those of Gratian, would not he — instead of you — be the enemy? Can you call him an enemy who only sought to preserve what was his own? Who is the lawful sovereign, — he who seeks to keep together his legitimate provinces, or he who has succeeded in wresting them away? Oh, thou successful usurper! God himself shall smite thee. Thou shalt be delivered into the hands of Theodosius. Thou shalt lose thy kingdom and thy life." How the prelate reminds us of a Jewish prophet giving to kings unwelcome messages,—of Daniel pointing out to Belshazzar the handwriting on the wall! He was not a Priam begging the dead body of his son, or hurling impotent weapons amid the crackling ruins of Troy, but an Elijah at the court of Ahab.

But this fearlessness was surpassed by the boldness of rebuke which later he dared to give to Theodosius, when this great general had defeated the Goths, and postponed for a time the ruin of the Empire, of which he became the supreme and only emperor. Theodosius was in fact one of the greatest of the emperors, and the last great man who swayed the sceptre of Trajan, his ancestor. On him the vulgar and the high-born equally gazed with admiration,—and yet he was not great enough to be free from vices, patron as he was of the Church and her institutions.

It seems that this illustrious emperor, in a fit of passion, ordered the slaughter of the people of Thessalonica, because they had arisen and killed some half-a-dozen of the officers of the government, in a sedition, on account of the imprisonment of a favorite circus-rider. The wrath of Theodosius knew no bounds. He had once before forgiven the people of Antioch for a more outrageous insult to imperial authority; but he would not pardon the people of Thessalonica, and caused some seven thousand of them to be executed,—an outrageous vengeance, a crime against humanity. The severity of this punishment filled the whole Empire with consternation. Ambrose himself was so overwhelmed with grief and indignation that he retired into the country in order to avoid all intercourse with his sovereign. And there he remained, until the emperor came to him—

self and comprehended the enormity of his crime. But Ambrose wrote a letter to the emperor, in which he insisted on his repentance and expiation. The emperor was so touched by the fidelity and eloquence of the prelate that he came to the cathedral to offer up his customary oblations. But the bishop, in his episcopal robes, met him at the porch and forbade his entrance. "Do not think, O Emperor, to atone for the enormity of your offence by merely presenting yourself in the church. Dream not of entering these sacred precincts with your hands stained with blood. Receive with submission the sentence of the Church." Then Theodosius attempted to justify himself by the example of David. "But," retorted the bishop, "if you imitate David in his crime, imitate David in his repentance. Insult not the Church by a double crime." So the emperor, in spite of his elevated rank and power, was obliged to return. The festival of Christmas approached, the great holiday of the Church, and then was seen one of the rarest spectacles which history records. The great emperor, now with undivided authority, penetrated with grief and shame and penitence, again approached the sacred edifice, and openly made a full confession of his sins; and not till then was he received into the communion of the Church.

I think this scene is grand; worthy of a great painter, — of a painter who knows history as well

as art, which so few painters do know; yet ought to know if they would produce immortal pictures. Nor do I know which to admire the more,—the penitent emperor offering public penance for his abuse of imperial authority, or the brave and conscientious prelate who dared to rebuke his sin. When has such a thing happened in modern times? Bossuet had the courage to dictate, in the royal chapel, the duties of a king, and Bourdaloue once ventured to reprove his royal hearer for an outrageous scandal. These instances of priestly boldness and fidelity are cited as remarkable. And they were remarkable, when we consider what an egotistical, haughty, exacting, voluptuous monarch Louis XIV. was,—a monarch who killed Racine by an angry glance. But what bishop presumed to insist on public penance for the persecutions of the Huguenots, or the lavish expenditures and imperious tyranny of the court mistresses, who scandalized France? I read of no churchman who, in more recent times, has dared to reprove and openly rebuke a sovereign, in the style of Ambrose, except John Knox. Ambrose not merely reproved, but he punished, and brought the greatest emperor, since Constantine, to the stool of penitence.

It was by such acts, as prelate, that Ambrose won immortal fame, and set an example to future ages. His whole career is full of such deeds of intrepidity. Once

he refused to offer the customary oblation of the altar until Theodosius had consented to remit an unjust fine. He battled all enemies alike, — infidels, emperors, and Pagans. It was his mission to act, rather than to talk. His greatness was in his character, like that of our Washington, who was not a man of words or genius. What a failure is a man in an exalted post without character!

But he had also other qualities which did him honor, — for which we reverence him. See his laborious life, his assiduity in the discharge of every duty, his charity, his broad humanity, soaring beyond mere conventional and technical and legal piety. See him breaking in pieces the consecrated vessels of the cathedral, and turning them into money to redeem Illyrian captives; and when reproached for this apparent desecration replying thus: “Whether is it better to preserve our gold or the souls of men? Has the Church no higher mission to fulfil than to guard the ornaments made by men’s hands, while the faithful are suffering exile and bonds? Do the blessed sacraments need silver and gold, to be efficacious? What greater service to the Church can we render than charities to the unfortunate, in obedience to that eternal test, ‘I was an hungered, and ye gave me meat’”? See this venerated prelate giving away his private fortune to the poor; see him refusing even to handle money, knowing the temp-

tation to avarice or greed. What a low estimate he placed on what was so universally valued, measuring money by the standard of eternal weights! See this good bishop, always surrounded with the pious and the learned, attending to all their wants, evincing with his charities the greatest capacity of friendship. His affections went out to all the world, and his chamber was open to everybody. The companion and Mentor of emperors, the prelate charged with the most pressing duties finds time for all who seek his advice or consolation.

One of the most striking facts which attest his goodness was his generous and affectionate treatment of Saint Augustine, at that time an unconverted teacher of rhetoric. It was Ambrose who was instrumental in his conversion; and only a man of broad experience, and deep convictions, and profound knowledge, and exquisite tact, could have had influence over the greatest thinker of Christian antiquity. Augustine not only praises the private life of Ambrose, but the eloquence of his sermons; and I suppose that Augustine was a judge in such matters. "For," says Augustine, "while I opened my heart to admire how eloquently he spoke, I also felt how truly he spoke." Everybody equally admired and loved this great metropolitan, because his piety was enlightened, because he was above all religious tricks and pious frauds. He even refused money

for the Church when given grudgingly, or extorted by plausible sophistries. He remitted to a poor woman a legacy which her brother had given to the Church leaving her penniless and dependent; declaring that "if the Church is to be enriched at the expense of fraternal friendships, if family ties are to be sundered, the cause of Christ would be dishonored rather than advanced." We see here not only a broad humanity, but a profound sense of justice,—a practical piety, showing an enlightened and generous soul. He was not the man to allow a family to be starved because a conscience-stricken husband or father wished, under ghostly influences and in face of death, to make a propitiation for a life of greediness and usurious grindings, by an unjust disposition of his fortune to the Church. Possibly he had doubts whether any money would benefit the Church which was obtained by wicked arts, or had been originally gained by injustice and hard-heartedness.

Thus does Saint Ambrose come down to us from antiquity, — great in his feats of heroism, great as an executive ruler of the Church, great in deeds of benevolence, rather than as orator, theologian, or student. Yet, like Chrysostom, he preached every Sunday, and often in the week besides, and his sermons had great power on his generation. When he died in 397 he

left behind him even a rich legacy of theological treatises, as well as some fervid, inspiring hymns, and an influence for the better in the modes of church music, which was the beginning of the modern development of that great element in public worship. As a defender of the faith by his pen, he may have yielded to greater geniuses than he; but as the guardian of the interests of the Church, as a stalwart giant, who prostrated the kings of the earth before him and gained the first great battles of the spiritual over the temporal power, Ambrose is worthy to be ranked among the great Fathers, and will continue to receive the praises of enlightened Christendom.

AUTHORITIES.

LIFE of Ambrose, by his deacon, Paulinus; Theodoret; Tillemont's *Memoires Ecclesiastique*, tom. x; Baronius; Zosimus; the *Epistles of Ambrose*; Butler's *Lives of the Saints*; *Biographie Universelle*; Gibbon's *Decline and Fall*. Milman has only a very brief notice of this great bishop, the founder of sacerdotalism in the Latin Church. Neander's and the standard Church Histories. There are some popular biographical sketches in the encyclopædias, but no classical history of this prelate, in English, with which I am acquainted. The French writers are the best.

SAINT AUGUSTINE.

A. D. 354-430.

CHRISTIAN THEOLOGY.

SAINT AUGUSTINE.

CHRISTIAN THEOLOGY.

THE most intellectual of all the Fathers of the Church was doubtless Saint Augustine. He is the great oracle of the Latin Church. He directed the thinking of the Christian world for a thousand years. He was not perhaps so learned as Origen, nor so critical as Jerome; but he was broader, profounder, and more original than they, or any other of the great lights who shed the radiance of genius on the crumbling fabric of the ancient civilization. He is the sainted doctor of the Church, equally an authority with both Catholics and Protestants. His penetrating genius, his comprehensive views of all systems of ancient thought, and his marvellous powers as a systematizer of Christian doctrines place him among the immortal benefactors of mankind; while his humanity, his breadth, his charity, and his piety have endeared him to the heart of the Christian world.

Let me present, as well as I can, his history, his services, and his personal character, all of which form no small part of the inheritance bequeathed to us by the giants of the fourth and fifth centuries, — that which we call the Patristic literature, — the only literature worthy of preservation in the declining days of the old Roman world.

Augustine was born at Tagaste, or Tagastum, near Carthage, in the Numidian province of the Roman Empire, in the year 354, — a province rich, cultivated, luxurious, where the people (at least the educated classes) spoke the Latin language, and had adopted the Roman laws and institutions. They were not black, like negroes, though probably swarthy, being descended from Tyrians and Greeks, as well as Numidians. They were as civilized as the Spaniards or the Gauls or the Syrians. Carthage then rivalled Alexandria, which was a Grecian city. If Augustine was not as white as Ptolemy or Cleopatra, he was probably no darker than Athanasius.

Unlike most of the great Fathers, his parentage was humble. He owed nothing to the circumstances of wealth and rank. His father was a heathen, and lived, as Augustine tells us, in "heathenish sin." But his mother was a woman of remarkable piety and strength of mind, who devoted herself to the education of her

son. Augustine never alludes to her except with veneration; and his history adds additional confirmation to the fact that nearly all the remarkable men of our world have had remarkable mothers. No woman is dearer to the Church than Monica, the sainted mother of Augustine, and chiefly in view of her intense solicitude for his spiritual interests, and her extraordinary faith in his future conversion, in spite of his youthful follies and excesses, — encouraged by that good bishop who told her “that it was impossible that the child of so many prayers could be lost.”

Augustine, in his “Confessions,” — that remarkable book which has lasted fifteen hundred years, and is still prized for its intensity, its candor, and its profound acquaintance with the human heart, as well as evangelical truth; not an egotistical parade of morbid sentimentalities, like the “Confessions” of Rousseau, but a mirror of Christian experience, — tells us that until he was sixteen he was obstinate, lazy, neglectful of his studies, indifferent to reproach, and abandoned to heathenish sports. He even committed petty thefts, was quarrelsome, and indulged in demoralizing pleasures. At nineteen he was sent to Carthage to be educated, where he went still further astray; was a follower of stage-players (then all but infamous), and gave himself up to unholy loves. But his intellect was inquiring, his nature genial, and his habits as studious as could

be reconciled with a life of pleasure, — a sort of Alcibiades, without his wealth and rank, willing to listen to any Socrates who would stimulate his mind. With all his excesses and vanities, he was not frivolous, and seemed at an early age to be a sincere inquirer after truth. The first work which had a marked effect on him was the “Hortensius” of Cicero, — a lost book, which contained an eloquent exhortation to philosophy, or the love of wisdom. From that he turned to the Holy Scriptures, but they seemed to him then very poor, compared with the stateliness of Tully, nor could his sharp wit penetrate their meaning. Those who seemed to have the greatest influence over him were the Manicheans, — a transcendental, oracular, indefinite, illogical, pretentious set of philosophers, who claimed superior wisdom, and were not unlike (at least in spirit) those modern *savans* in the Christian commonwealth, who make a mockery of what is most sacred in Christianity while themselves propounding the most absurd theories.

The Manicheans claimed to be a Christian sect, but were Oriental in their origin and Pagan in their ideas. They derived their doctrines from Manes, or Mani, who flourished in Persia in the second half of the third century, and who engrafted some Christian doctrines on his system, which was essentially the dualism of Zoroaster and the pantheism of Buddha. He assumed two original substances, — God and Hyle, light and dark-

ness, good and evil, — which were opposed to each other. Matter, which is neither good nor evil, was regarded as bad in itself, and identified with darkness, the prince of which overthrew the primitive man. Among the descendants of the fallen man light and darkness have struggled for supremacy, but matter, or darkness, conquered; and Christ, who was confounded with the sun, came to break the dominion. But the light of his essential being could not unite with darkness; therefore he was not born of a woman, nor did he die to rise again. Christ had thus no personal existence. As the body, being matter, was thought to be essentially evil, it was the aim of the Manicheans to set the soul free from matter: hence abstinence, and the various forms of asceticism which early entered into the pietism of the Oriental monks. That which gave the Manicheans a hold on the mind of Augustine, seeking after truth, was their arrogant claim to the solution of mysteries, especially the origin of evil, and their affectation of superior knowledge. Their watchwords were Reason, Science, Philosophy. Moreover, like the Sophists in the time of Socrates, they were assuming, specious, and rhetorical. Augustine — ardent, imaginative, credulous — was attracted by them, and he enrolled himself in their esoteric circle.

The coarser forms of sin he now abandoned, only to resign himself to the emptiness of dreamy speculations

and the praises of admirers. He won prizes and laurels in the schools. For nine years he was much flattered for his philosophical attainments. I can almost see this enthusiastic youth scandalizing and shocking his mother and her friends by his bold advocacy of doctrines at war with the gospel, but which he supposed to be very philosophical. Pert and bright young men in these times often talk as he did, but do not know enough to see their own shallowness.

“Drink deep, or taste not the Pierian spring.”

The mind of Augustine, however, was logical, and naturally profound; and at last he became dissatisfied with the nonsense with which plausible pretenders ensnared him. He was then what we should call a schoolmaster, or what some would call a professor, and taught rhetoric for his support, which was a lucrative and honorable calling. He became a master of words. From words he ascended to definitions, and like all true inquirers began to love the definite, the precise. He wanted a basis to stand upon. He sought certitudes, — elemental truths which sophistry could not cover up. Then the Manicheans could no longer satisfy him. He had doubts, difficulties, which no Manichean could explain, not even Dr. Faustus of Mileve, the great oracle and leader of the sect, — a subtle dialectician and brilliant orator, but without depth or

earnestness,—whom he compares to a cup-bearer presenting a costly goblet, but without anything in it. And when it became clear that this high-priest of pretended wisdom was ignorant of the things in which he was supposed to excel, but which Augustine himself had already learned, his disappointment was so great that he lost faith both in the teacher and his doctrines. Thus this Faustus, “neither willing nor witting it,” was the very man who loosened the net which had ensnared Augustine for so many years.

He was now thirty years of age, and had taught rhetoric in Carthage, the capital of Northern Africa, with brilliant success, for three years; but panting for new honors or for new truth, he removed to Rome, to pursue both his profession and his philosophical studies. He entered the capital of the world in the height of its material glories, but in the decline of its political importance, when Damasus occupied the episcopal throne, and Saint Jerome was explaining the Scriptures to the high-born ladies of Mount Aventine, who grouped around him,—women like Paula, Fabiola, and Marcella. Augustine knew none of these illustrious people. He lodged with a Manichean, and still frequented the meetings of the sect; convinced, indeed, that the truth was not with them, but despairing to find it elsewhere. In this state of mind he was drawn to the doctrines of the New Academy,—or, as Augustine

in his "Confessions" calls them, the Academics, — whose representatives, Arcesilaus and Carneades, also made great pretensions, but denied the possibility of arriving at absolute truth, — aiming only at probability. However lofty the speculations of these philosophers, they were sceptical in their tendency. They furnished no anchor for such an earnest thinker as Augustine. They gave him no consolation. Yet his dislike of Christianity remained.

Moreover, he was disappointed with Rome. He did not find there the great men he sought, or if great men were there he could not get access to them. He found himself in a moral desert, without friends and congenial companions. He found everybody so immersed in pleasure, or gain, or frivolity, that they had no time or inclination for the quest for truth, except in those circles he despised. "Truth," they cynically said, "what *is* truth? Will truth enable us to make eligible matches with rich women? Will it give us luxurious banquets, or build palaces, or procure chariots of silver, or robes of silk, or oysters of the Lucrine lake, or Falernian wines? Let us eat and drink, for to-morrow we die." Inasmuch as the arts of rhetoric enabled men to rise at the bar or shine in fashionable circles, he had plenty of scholars; but they left his lecture-room when required to pay. At Carthage his pupils were boisterous and turbulent; at Rome they were tricky and mean. The professor was

not only disappointed, — he was disgusted. He found neither truth nor money. Still, he was not wholly unknown or unsuccessful. His great abilities were seen and admired; so that when the people of Milan sent to Symmachus, the prefect of the city, to procure for them an able teacher of rhetoric, he sent Augustine, — a providential thing, since in the second capital of Italy he heard the great Ambrose preach; he found one Christian whom he respected, whom he admired, — and him he sought. And Ambrose found time to show him an episcopal kindness. At first Augustine listened as a critic, trying the eloquence of Ambrose, whether it answered the fame thereof, or flowed fuller or lower than was reported; “but of the matter I was,” says Augustine, “a scornful and careless looker-on, being delighted with the sweetness of his discourse. Yet I was, though by little and little, gradually drawing nearer and nearer to truth; for though I took no pains to learn *what* he spoke, only to hear *how* he spoke, yet, together with the words which I would choose, came into my mind the things I would refuse; and while I opened my heart to admire how eloquently he spoke, I also felt how truly he spoke. And so by degrees I resolved to abandon forever the Manicheans, whose falsehoods I detested, and determined to be a catechumen of the Catholic Church.”

This was the great crisis of his life. He had renounced a false philosophy; he sought truth from a Christian

bishop; he put himself under Christian influences. Fortunately at this time his mother Monica, to whom he had lied and from whom he had run away, joined him; also his son Adeodatus,—the son of the woman with whom he had lived in illicit intercourse for fifteen years. But his conversion was not accomplished. He purposed marriage, sent away his concubine to Africa, and yet fell again into the mazes of another unlawful and entangling love. It was not easy to overcome the loose habits of his life. Sensuality ever robs a man of the power of will. He had a double nature,—a strong sensual body, with a lofty and inquiring soul. And awful were his conflicts, not with an unfettered imagination, like Jerome in the wilderness, but with positive sin. The evil that he would not, that he did, followed with remorse and shame; still a slave to his senses, and perhaps to his imagination, for though he had broken away from the materialism of the Manicheans, he had not abandoned philosophy. He read the books of Plato, which had a good effect, since he saw, what he had not seen before, that true realities are purely intellectual, and that God, who occupies the summit of the world of intelligence, is a pure spirit, inaccessible to the senses; so that Platonism to him, in an important sense, was the vestibule of Christianity. Platonism, the loftiest development of pagan thought, however, did not emancipate him. He comprehended the Logos of the Athe-

nian sage; but he did not comprehend the Word made flesh, the Word attached to the Cross. The mystery of the Incarnation offended his pride of reason.

At length light beamed in upon him from another source, whose simplicity he had despised. He read Saint Paul. No longer did the apostle's style seem barbarous, as it did to Cardinal Bembo, — it was a fountain of life. He was taught two things he had not read in the books of the Platonists, — the lost state of man, and the need of divine grace. The Incarnation appeared in a new light. Jesus Christ was revealed to him as the restorer of fallen humanity.

He was now "rationally convinced." He accepted the theology of Saint Paul; but he could not break away from his sins. And yet the awful truths he accepted filled him with anguish, and produced dreadful conflicts. The law of his members warred against the law of his mind. In agonies he cried, "Oh, wretched man that I am! Who shall deliver me from this body of death?" He shunned all intercourse. He withdrew to his garden, reclined under a fig-tree, and gave vent to bitter tears. He wrestled with the angel, and his deliverance was at hand. It was under the fig-tree of his garden that he fancied he heard a voice of boy or girl, he could not tell, chanting and often repeating, "Take up and read; take up and read." He opened the Scriptures, and his eye alighted not on the text which had converted Antony

the monk, "Go and sell all that thou hast and give to the poor, and thou shalt have treasure in heaven," but on this: "Let us walk honestly, as in the day, not in rioting, drunkenness, and wantonness, but put ye on the Lord Jesus Christ, and not make provision for the flesh, to fulfil the lusts thereof." That text decided him, and broke his fetters. His conversion was accomplished. He poured forth his soul in thanksgiving and praise.

He was now in the thirty second year of his age, and resolved to renounce his profession, — or, to use his language, "to withdraw from the marts of lip-labor and the selling of words," — and enter the service of the new master who had called him to prepare himself for a higher vocation. He retired to a country house, near Milan, which belonged to his friend Veracundus, and he was accompanied in his retreat by his mother, his brother Navigius, his son Adeodatus, Alypius his confidant, Trigentius and Licentius his scholars, and his cousins Lastidianus and Rusticus. I should like to describe those blissful and enchanting days, when without asceticism and without fanaticism, surrounded with admiring friends and relatives, he discoursed on the highest truths which can elevate the human mind. Amid the rich olive-groves and dark waving chesnuts which skirted the loveliest of Italian lakes, in sight of both Alps and Apennines, did this great master of Christian philosophy prepare him-

self for his future labors, and forge the weapons with which he overthrew the high-priests who assailed the integrity of the Christian faith. The hand of opulent friendship supplied his wants, as Paula ministered to Jerome in Bethlehem. Often were discussions with his pupils and friends prolonged into the night and continued until the morning. Plato and Saint Paul reappeared in the gardens of Como. Thus three more glorious years were passed in study, in retirement, and in profitable discourse, without scandal and without vanity. The proud philosopher was changed into a humble Christian, thirsting for a living union with God. The Psalms of David, next to the Epistles of Saint Paul, were his favorite study, — that pure and lofty poetry “ which strips away the curtains of the skies, and approaches boldly but meekly into the presence of Him who dwells in boundless and inaccessible majesty.” In the year 387, at the age of thirty-three, he received the rite of baptism from the great archbishop who was so instrumental in his conversion, and was admitted into the ranks of the visible Church, and prepared to return to Africa. But before he could embark, his beloved mother died at Ostia, feeling, with Simeon, that she could now depart in peace, having seen the salvation of the Lord, — but to the immoderate grief of Augustine who made no effort to dry his tears. It was not till the following year that he sailed for Carthage, not long tarrying there, but retiring to

Tagaste, to his paternal estate, where he spent three years more in study and meditation, giving away all he possessed to religion and charity, living with his friends in a complete community of goods. It was there that some of his best works were composed. In the year 391, on a visit to Hippo, a Numidian seaport, he was forced into more active duties. Entering the church, the people clamored for his ordination; and such was his power as a pulpit orator, and so universally was he revered, that in two years after he became coadjutor bishop, and his great career began.

As a bishop he won universal admiration. Councils could do nothing without his presence. Emperors condescended to sue for his advice. He wrote letters to all parts of Christendom. He was alike saint, oracle, prelate, and preacher. He labored day and night, living simply, but without monkish austerity. At table, reading and literary conferences were preferred to secular conversation. His person was accessible. He interested himself in everybody's troubles, and visited the forlorn and miserable. He was indefatigable in reclaiming those who had strayed from the fold. He won every heart by charity, and captivated every mind with his eloquence; so that Hippo, a little African town, was no longer "least among the cities of Judah," since her prelate was consulted from the extremities of the earth, and his influence went forth throughout the crumbling Empire.

to heal division and establish the faith of the wavering, — a Father of the Church universal.

Yet it is not as bishop, but as doctor, that he is immortal. It was his mission to head off the dissensions and heresies of his age, and to establish the faith of Paul even among the Germanic barbarians. He is the great theologian of the Church, and his system of divinity not only was the creed of the Middle Ages, but is still an authority in the schools, both Catholic and Protestant.

Let us, then, turn to his services as theologian and philosopher. He wrote over a thousand treatises, and on almost every subject that has interested the human mind; but his labors were chiefly confined to the prevailing and more subtle and dangerous errors of his day. Nor was it by dry dialectics that he refuted these heresies, although the most logical and acute of men, but by his profound insight into the cardinal principles of Christianity, which he discoursed upon with the most extraordinary affluence of thought and language, disdaining all sophistries and speculations. He went to the very core, — a realist of the most exalted type, permeated with the spirit of Plato, yet bowing down to Paul.

We first find him combating the opinions which had originally enthralled him, and which he understood better than any theologian who ever lived.

But I need not repeat what I have already said of the

Manicheans, — those arrogant and shallow philosophers who made such high pretension to superior wisdom ; men who adored the divinity of mind, and the inherent evil of matter ; men who sought to emancipate the soul, which in their view needed no regeneration from all the influences of the body. That this soul, purified by asceticism, might be reunited to the great spirit of the universe from which it had originally emanated, was the hopeless aim and dream of these theosophists, — not the control of passions and appetites, which God commands, but their eradication ; not the worship of a Creator who made the heaven and the earth, but a vague worship of the creation itself. They little dreamed that it is not the body (neither good nor evil in itself) which is sinful, but the perverted mind and soul, the wicked imagination of the heart, out of which proceeds that which defileth a man, and which can only be controlled and purified by Divine assistance. Augustine showed that purity was an inward virtue, not the crucifixion of the body ; that its passions and appetites are made to be subservient to reason and duty ; that the law of temperance is self-restraint ; that the soul was not an emanation or evolution from eternal light, but a distinct creation of Almighty God, which He has the power to destroy, as well as the body itself ; that nothing in the universe can live without His pleasure ; that His intervention is a logical sequence of His moral government. But his most

withering denunciation of the Manicheans was directed against their pride of reason, against their darkened understanding, which led them not only to believe a lie, but to glory in it, — the utter perverseness of the mind when in rebellion to divine authority, in view of which it is almost vain to argue, since truth will neither be admitted nor accepted.

There was another class of Christians who provoked the controversial genius of Augustine, and these were the Donatists. These men were not heretics, but bigots. They made the rite of baptism to depend on the character of the officiating priest; and hence they insisted on rebaptism, if the priest who had baptized proved unworthy. They seemed to forget that no clergyman ever baptized from his own authority or worthiness, but only in the name of the Father, and the Son, and the Holy Ghost. Nobody knows who baptized Paul, and he felt under certain circumstances even that he was sent not to baptize, but to preach the gospel. Lay baptism has always been held valid. Hence, such reformers as Calvin and Knox did not deem it necessary to rebaptize those who had been converted from the Roman Catholic faith; and, if I do not mistake, even Roman Catholics do not insist on rebaptizing Protestants. But the Donatists so magnified, not the rite, but the form of it, that they lost the spirit of it, and became seceders, and created a mournful division in the Church, — a schism which

gave rise to bitter animosities. The churches of Africa were rent by their implacable feuds, and on so small a matter, — even as the ranks of the reformers under Luther were so soon divided by the Anabaptists. In proportion to the unimportance of the shibboleth was tenacity to it, — a mark which has ever characterized narrow and illiberal minds. It is not because a man accepts a shibboleth that he is narrow and small, but because he fights for it. As a minute critic would cast out from the fraternity of scholars him who cannot tell the difference between *ac* and *et*, so the Donatist would expel from the true fold of Christ those who accepted baptism from an unworthy priest. Augustine at first showed great moderation and patience and gentleness in dealing with these narrow-minded and fierce sectarians, who carried their animosity so far as to forbid bread to be baked for the use of the Catholics in Carthage, when they had the ascendancy; but at last he became indignant, and implored the aid of secular magistrates.

Augustine's controversy with the Donatists led to two remarkable tracts, — one on the evil of suppressing heresy by the sword, and the other on the unity of the Church.

In the first he showed a spirit of toleration beyond his age; and this is more remarkable because his temper was naturally ardent and fiery. But he protested in his writings, and before councils, against violence in forcing

religious convictions, and advocated a liberality worthy of John Locke.

In the second tract he advocated a principle which had a prodigious influence on the minds of his generation, and greatly contributed to establish the polity of the Roman Catholic Church. He argued the necessity of unity in government as well as unity in faith, like Cyprian before him; and this has endeared him to the Roman Catholic Church, I apprehend, even more than his glorious defence of the Pauline theology. There are some who think that all governments arise out of the circumstances and the necessities of the times, and that there are no rules laid down in the Bible for any particular form or polity, since a government which may be adapted to one age or people may not be fitted for another; — even as a monarchy would not succeed in New England any more than a democracy in China. But the most powerful sects among Protestants, as well as among the Catholics themselves, insist on the divine authority for their several forms of government, and all would have insisted, at different periods, on producing conformity with their notions. The high-church Episcopalian and the high-church Presbyterian equally insist on the divine authority for their respective institutions. The Catholics simply do the same, when they make Saint Peter the rock on which the supremacy of their Church is based. In the time of Augustine there was only

one form of the visible Church,—there were no Protestants; and he naturally wished, like any bishop, to strengthen and establish its unity, — a government of bishops, of which the bishop of Rome was the acknowledged head. But he did not anticipate — and I believe he would not have indorsed — their future encroachments which naturally followed their domination of the political world, to say nothing of personal aggrandizement and the usurpation of temporal authority. And yet the central power they established on the banks of the Tiber was, with all its corruptions, fitted to conserve the interests of Christendom in rude ages of barbarism and ignorance; and possibly Augustine, with his profound intuitions, and in view of the approaching desolations of the Christian world, wished to give to the clergy and to their head all the moral power and prestige possible, to awe and control the barbaric chieftains, for in his day the Empire was crumbling to pieces, and the old civilization was being trampled under foot. If there was a man in the whole Empire capable of taking comprehensive views of the necessities of society, that man was the Bishop of Hippo; so that if we do not agree with his views of church government, let us bear in mind the age in which he lived, and its peculiar dangers and necessities. And let us also remember that his idea of the unity of the Church has a spiritual as well as a tem-

poral meaning, and in that sublime and lofty sense can never be controverted so long as *One Lord, One Faith, One Baptism* remain the common creed of Christians in all parts of the world. It was to preserve this unity that he entered so zealously into all the great controversies of the age, and fought heretics as well as schismatics.

The great work which pre-eminently called out his genius, and for which he would seem to have been raised up, was to combat the Pelagian heresy, and establish the doctrine of the necessity of Divine Grace, — even as it was the mission of Athanasius to defend the doctrine of the Trinity, and that of Luther to establish Justification by Faith. In all ages there are certain heresies, or errors, which have spread so dangerously, and been embraced so generally by the leading and fashionable classes, that they seem to require some extraordinary genius to arise in order to combat them successfully, and rescue the Church from the snares of a false philosophy. Thus Bernard was raised up to refute the rationalism and nominalism of Abélard, whose brilliant and subtile inquiries had a tendency to extinguish faith in the world, and bring all mysteries to the test of reason. The enthusiastic and inquiring young men who flocked to his lectures from all parts of Europe carried back to their homes and convents and schools insidious errors, all the more dangerous because they were mixed with truths which

were universally recognized. It required such a man as Bernard to expose these sophistries and destroy their power, not so much by dialectical weapons as by appealing to those lofty truths, those profound convictions, those essential and immutable principles which consciousness reveals and divine authority confirms. It took a greater than Abélard to show the tendency of his speculations, from the logical sequence of which even he himself would have fled, and which he did reject when misfortunes had broken his heart, and disease had brought him to face the realities of the future life. So God raised up Pascal to expose the sophistries of the Jesuits and unravel that subtle casuistry which was undermining the morality of the age, and destroying the authority of Saint Augustine on some of the most vital principles which entered into the creed of the Catholic Church. Thus Jonathan Edwards, the ablest theologian which this country has seen, controverted the fashionable Arminianism of his day. Thus some great intellectual giant will certainly and in due time appear to demolish with scathing irony the theories and speculations of some of the progressive schools of our day, and present their absurdities and boastings and pretensions in such a ridiculous light that no man with any intellectual dignity will dare to belong to their fraternity, unless he impiously accepts—sometimes with ribald mockeries—the logical sequence of their doctrines.

Now it was not the Manicheans or Donatists who were the most dangerous people in the time of Augustine,—nor were their doctrines likely to be embraced by the Christian schools, especially in the West; but it was the Pelagians who in high places were assailing the Pauline theology. And they advocated principles which lay at the root of most of the subsequent controversies of the Church. They were intellectual men, generally good men, who could not be put down, and who would thrive under any opposition. Augustine did not attack the character of these men, but rendered a great service to the Church by pointing out, clearly and luminously, the antichristian character of their theories, when rigorously pushed out, by a remorseless logic, to their necessary sequence.

Whatever value may be attached to that science which is based on deductions drawn from the truths of revelation, certain it is that it was theology which most interested Christians in the time of Augustine, as in the time of Athanasius; and his controversy with the Pelagians made then a mighty stir, and is at the root of half the theological discussions from that age to ours. If we would understand the changes of human thought in the Middle Ages, if we would seek to know what is most vital in Church history, that celebrated Pelagian controversy claims our special attention.

It was at a great crisis in the Church when a British

monk of extraordinary talents, persuasive eloquence, and great attainments, — a man accustomed to the use of dialectical weapons and experienced by extensive travels, ambitious, ardent, plausible, adroit, — appeared among the churches and advanced a new philosophy. His name was Pelagius; and he was accompanied by a man of still greater logical power than he himself possessed, though not so eloquent or accomplished or pleasing in manner, who was called Celestius, — two doctors of whom the schools were justly proud, and who were admired and honored by enthusiastic young men, as Abelard was in after-times.

Nothing disagreeable marked these apostles of the new philosophy, nor could the malignant voice of theological hatred and envy bring upon their lives either scandal or reproach. They had none of the infirmities which so often have dimmed the lustre of great benefactors. They were not dogmatic like Luther, nor severe like Calvin, nor intolerant like Knox. Pelagius, especially, was a most interesting man, though more of a philosopher than a Christian. Like Zeno, he exalted the human will; like Aristotle, he subjected all truth to the test of logical formularies; like Abelard, he would believe nothing which he could not explain or comprehend. Self-confident, like Servetus, he disdained the Cross. The central principle of his teachings was man's ability to practise any virtue, independently of

divine grace. He made perfection a thing easy to be attained. There was no need, in his eyes, as his adversaries maintained, of supernatural aid in the work of salvation. Hence a Saviour was needless. By faith, he is represented to mean mere intellectual convictions, to be reached through the reason alone. Prayer was useful simply to stimulate a man's own will. He was further represented as repudiating miracles as contrary to reason, of abhorring divine sovereignty as fatal to the exercise of the will, of denying special providences as opposing the operation of natural laws, as rejecting native depravity and maintaining that the natural tendency of society was to rise in both virtue and knowledge, and of course rejecting the idea of a Devil tempting man to sin. "His doctrines," says one of his biographers, "were pleasing to pride, by flattering its pretension; to nature, by exaggerating its power; and to reason, by extolling its capacity." He asserted that death was not the penalty of Adam's transgression; he denied the consequences of his sin; and he denied the spiritual resurrection of man by the death of Christ, thus rejecting him as a divine Redeemer. Why should there be a divine redemption if man could save himself? He blotted out Christ from the book of life by representing him merely as a martyr suffering for the declaration of truths which were not appreciated, — like Socrates at Athens, or Savonarola at Florence. In support

of all these doctrines, so different from those of Paul, he appealed, not to the apostle's authority, but to human reason, and sought the aid of Pagan philosophy, rather than the Scriptures, to arrive at truth.

Thus was Pelagius represented by his opponents, who may have exaggerated his heresies, and have pushed his doctrines to a logical sequence which he would not accept but would even repel, in the same manner as the Pelagians drew deductions from the teachings of Augustine which were exceedingly unfair, — making God the author of sin, and election to salvation to depend on the foreseen conduct of men in regard to an obedience which they had no power to perform.

But whether Pelagius did or did not hold all the doctrines of which he was accused, it is certain that the spirit of them was antagonistic to the teachings of Paul, as understood by Augustine, who felt that the very foundations of Christianity were assailed, — as Athanasius regarded the doctrines of Arius. So he came to the rescue, not of the Catholic Church, for Pelagius belonged to it as well as he, but to the rescue of Christian theology. The doctrines of Pelagius were becoming fashionable and prevalent in many parts of the Empire, and Augustine feared their extension. They might spread until they should be embraced by the whole Catholic world, for Augustine believed in the vitality of error as well as in the vitality of truth, — of the natural and in-

evitable tendency of society towards Paganism, without the especial and restraining grace of God. He armed himself for the great conflict with the infidelity of his day, not with David's sling, but Goliath's sword. He used the same weapons as his antagonist, even the arms of reason and knowledge, and constructed an argument which was overwhelming, if Paul's Epistles were to be the accepted premises of his irresistible logic. Great as was Pelagius, Augustine was a far greater man,—broader, deeper, more learned, more logical, more eloquent, more intense. He was raised up to demolish, with the very reason he professed to disdain, the sophistries and dogmas of one of the most dangerous enemies which the Church had ever known, —to leave to posterity his logic and his conclusions when similar enemies of his faith should rise up in future ages. He furnished a thesaurus not merely to Bernard and Thomas Aquinas, but even to Calvin and Bossuet and Pascal. And I believe it will be the lucidity of the Bishop of Hippo which shall bring back to the older faith, if it is ever brought back, that part of the Roman Catholic Church which accepts the verdict of the Council of Trent, when that famous council indorsed the opinions of Pelagius while upholding the authority of Augustine as the greatest doctor of the Church.

To a man like Augustine, with his deep experiences,—
a man rescued from a seductive philosophy and a cor-

rupt life, as he thought, by the special grace of God and in answer to his mother's prayers,—the views of Pelagius were both false and dangerous. He could find no words sufficiently intense whereby to express his gratitude for his deliverance from both sin and error. To him this Deliverer is so personal, so loving, that he pours out his confession to Him as if He were both friend and father. And he felt that all that is vital in theology must radiate from the recognition of His sovereign power in the renovation and salvation of the world. All his experiences and observations of life confirmed the authority of Scripture,—that the world, as a matter of fact, was sunk in a state of sin and misery, and could be rescued only by that divine power which converted Paul. His views of predestination, grace, and Providence all radiate from the central principle of the majesty of God and the littleness of man. All his ideas of the servitude of the will are confirmed by his personal experience of the awful fetters which sin imposes, and the impossibility of breaking away from them without direct aid from the God who ruleth the world in love. And he had an infinitely greater and deeper conviction of the reality of this divine love, which had rescued him, than Pelagius had, who felt that his salvation was the result of his own merits. The views of Augustine were infinitely more cheerful than those of his adversary respecting salvation, since they gave more hope to the miserable

population of the Empire who could not claim the virtues of Pelagius, and were impotent of themselves to break away from the bondage which degraded them. There is nothing in the writings of Augustine, — not in this controversy, or any other controversy, — to show that God delights in the miseries or the penalty which are indissolubly connected with sin; on the contrary, he blesses and adores the divine hand which releases men from the constraints which sin imposes. This divine interposition is wholly based on a divine and infinite love. It is the helping hand of Omnipotence to the weak will of man, — the weak will even of Paul, when he exclaimed, “The evil that I would not, that I do.” It is the unloosing, by His loving assistance, of the wings by which the emancipated soul would rise to the lofty regions of peace and contemplation.

I know very well that the doctrines which Augustine systematized from Paul involve questions which we cannot answer; for why should not an infinite and omnipotent God give to all men the saving grace that he gave to Augustine? Why should not this loving and compassionate Father break all the fetters of sin everywhere, and restore the primeval Paradise in this wicked world where Satan seems to reign? Is He not more powerful than devils? Alas! the prevalence of evil is more mysterious than the origin of evil. But this is something, — and it is well for the critic and opponent

of the Augustinian theology to bear this in mind, — that Augustine was an earnest seeker after truth, even when enslaved by the fornications of Carthage ; and his own free-will in persistently seeking truth, through all the mazes of Manichean and Grecian speculation, is as manifest as the divine grace which came to his assistance. God Almighty does not break fetters until there is some desire in men to have them broken. If men *will* hug sins, they must not complain of their bondage. Augustine recognized free-will, which so many think he ignored, when his soul aspired to a higher life. When a drunkard in his agonies cries out to God, then help is near. A drowning man who calls for a rope when a rope is near stands a good chance of being rescued.

I need not detail the results of this famous controversy. Augustine, appealing to the consciousness of mankind as well as to the testimony of Paul, prevailed over Pelagius, who appealed to the pride of reason. In those dreadful times there were more men who felt the need of divine grace than there were philosophers who revelled in the speculations of the Greeks. The danger from the Pelagians was not from their organization as a sect, but their opinions as individual men. Probably there were all shades of opinion among them, from a modest and thoughtful semi-Pelagianism to the rankest infidelity. There always have been, and prob-

ably ever will be, sceptical and rationalistic people, even in the bosom of the Church.

Now had it not been for Augustine, — a profound thinker, a man of boundless influence and authority, — it is not unlikely that Pelagianism would have taken so deep a root in the mind of Christendom, especially in the hearts of princes and nobles, that it would have become the creed of the Church. Even as it was, it was never fully eradicated in the schools and in the courts and among worldly people of culture and fashion.

But the fame of Augustine does not rest on his controversies with heretics and schismatics alone. He wrote treatises on almost all subjects of vital interest to the Church. His essay on the Trinity was worthy of Athanasius, and has never been surpassed in lucidity and power. His soliloquies on a blissful life, and the order of the universe, and the immortality of the soul are pregnant with the richest thought, equal to the best treatises of Cicero or Boethius. His commentary on the Psalms is sparkling with tender effusions, in which every thought is a sentiment and every sentiment is a blazing flame of piety and love. Perhaps his greatest work was the amusement of his leisure hours for thirteen years, — a philosophical treatise called "The City of God," in which he raises and replies to all the great questions of his day; a sort of Christian poem upon our origin and end, and a final answer to Pagan

theogonies, — a final sentence on all the gods of antiquity. In that marvellous book he soars above his ordinary excellence, and develops the designs of God in the history of States and empires, furnishing for Bossuet the groundwork of his universal history. Its great excellence, however, is its triumphant defence of Christianity over all other religions, — the last of the great apologies which, while settling the faith of the Christian world, demolished forever the last stronghold of a defeated Paganism. As “ancient Egypt pronounced judgments on her departed kings before proceeding to their burial, so Augustine interrogates the gods of antiquity, shows their impotence to sustain the people who worshipped them, triumphantly sings their departed greatness, and seals with his powerful hand the sepulchre into which they were consigned forever.”

Besides all the treatises of Augustine, — exegetical, apologetical, dogmatical, polemical, ascetic, and autobiographical, — three hundred and sixty-three of his sermons have come down to us, and numerous letters to the great men and women of his time. Perhaps he wrote too much and too loosely, without sufficient regard to art, — like Varro, the most voluminous writer of antiquity, and to whose writings Augustine was much indebted. If Saint Augustine had written less, and with more care, his writings would now be more read and more valued. Thucydides compressed the labors of his literary

life into a single volume ; but that volume is immortal, is a classic, is a text-book. Yet no work of man is probably more lasting than the "Confessions" of Augustine, from the extraordinary affluence and subtilty of his thoughts, and his burning, fervid, passionate style. When books were scarce and dear, his various works were the food of the Middle Ages : and what better books ever nourished the European mind in a long period of ignorance and ignominy ? So that we cannot overrate his influence in giving a direction to Christian thought. He lived in the writings of the sainted doctors of the Scholastic schools. And he was a very favored man in living to a good old age, wearing the harness of a Christian laborer and the armor of a Christian warrior until he was seventy-six. He was a bishop nearly forty years. For forty years he was the oracle of the Church, the light of doctors. His social and private life had also great charms : he lived the doctrines that he preached ; he completely triumphed over the temptations which once assailed him. Everybody loved as well as revered him, so genial was his humanity, so broad his charity. He was affable, courteous, accessible, full of sympathy and kindness. He was tolerant of human infirmities in an age of angry controversy and ascetic rigors. He lived simply, but was exceedingly hospitable. He cared nothing for money, and gave away what he had. He knew the luxury of

charity, having no superfluities. He was forgiving as well as tolerant; saying, It is necessary to pardon offences, not seven times, but seventy times seven. No one could remember an idle word from his lips after his conversion. His humility was as marked as his charity, ascribing all his triumphs to divine assistance. He was not a monk, but gave rules to monastic orders. He might have been a metropolitan patriarch or pope; but he was contented with being bishop of a little Numidian town. His only visits beyond the sanctuary were to the poor and miserable. As he won every heart by love, so he subdued every mind by eloquence. He died leaving no testament, because he had no property to bequeath but his immortal writings, — some ten hundred and thirty distinct productions. He died in the year 430, when his city was besieged by the Vandals, and in the arms of his faithful Alypius, then a neighboring bishop, full of visions of the ineffable beauty of that blissful state to which his renovated spirit had been for forty years constantly soaring.

“Thus ceased to flow,” said a contemporary, “that river of eloquence which had watered the thirsty fields of the Church; thus passed away the glory of preachers, the master of doctors, and the light of scholars; thus fell the courageous combatant who with the sword of truth had given heresy a mortal blow; thus

set this glorious sun of Christian doctrine, leaving a world in darkness and in tears."

His vacant see had no successor. "The African province, the cherished jewel of the Roman Empire, sparkled for a while in the Vandal diadem. The Greek supplanted the Vandal, and the Saracen supplanted the Greek, and the home of Augustine was blotted out from the map of Christendom." The light of the gospel was totally extinguished in Northern Africa. The acts of Rome and the doctrines of Cyprian were equally forgotten by the Mahommedan conquerors. Only in Bona, as Hippo is now called, has the memory of the great bishop been cherished,—the one solitary flower which escaped the successive desolations of Vandals and Saracens. And when Algiers was conquered by the French in 1830, the sacred relics of the saint were transferred from Pavia (where they had been deposited by the order of Charlemagne), in a coffin of lead, enclosed in a coffin of silver, and the whole secured in a sarcophagus of marble, and finally committed to the earth near the scenes which had witnessed his transcendent labors. I do not know whether any monument of marble and granite was erected to his memory; but he needs no chiselled stone, no storied urn, no marble bust, to perpetuate his fame. For nearly fifteen hundred years he has reigned as the great oracle of the Church, Catholic and Protestant, in

matters of doctrine, — the precursor of Bernard, of Leibnitz, of Calvin, of Bossuet, all of whom reproduced his ideas, and acknowledged him as the fountain of their own greatness. “Whether,” said one of the late martyred archbishops of Paris, “he reveals to us the foundations of an impure polytheism, so varied in its developments, yet so uniform in its elemental principles; or whether he sports with the most difficult problems of philosophy, and throws out thoughts which in after times are sufficient to give an immortality to Descartes, — we always find in this great doctor all that human genius, enlightened by the Spirit of God, can explain, and also to what a sublime height reason herself may soar when allied with faith.”

AUTHORITIES.

THE voluminous Works of Saint Augustine, especially his “Confessions.” Mabillon, Tillemont, and Baronius have written very fully of this great Father. See also Vaughan’s *Life of Thomas Aquinas*. Neander, Geisler, Mosheim, and Milman indorse, in the main, the eulogium of Catholic writers. There are numerous popular biographies, of which those of Baillie and Schaff are among the best; but the most satisfactory book I have read is the *History of M. Poujoulat*, in three volumes, issued at Paris in 1846. Butler, in his *Lives of the Saints*, has an extended biography. Even Gibbon pays a high tribute to his genius and character.

THEODOSIUS THE GREAT.

A. D. 346-395.

THE LATTER DAYS OF ROME.

THEODOSIUS THE GREAT.

THE LATTER DAYS OF ROME.

THE last of those Roman emperors whom we call great was Theodosius. After him there is no great historic name, unless it be Justinian, who reigned when Rome had fallen. With Theodosius is associated the life-and-death struggle of Rome with the Gothic barbarians, and the final collapse of Paganism as a tolerated religion. Paganism in its essence, its spirit, was not extinguished; it entered into new forms, even into the Church itself; and it still exists in Christian countries. When Bismarck was asked why he did not throw down his burdens, he is reported to have said: "Because no man can take my place. I should like to retire to my estates and raise cabbages; but I have work to do against Paganism: I live among Pagans." Neither Theodosius nor Bismarck was what we should call a saint. Both have been stained by acts which it is hard to distinguish from crimes; but both have given evidence of hatred of certain evils which undermine society. Theo-

dosius, especially, made war and fought nobly against the two things which most imperilled the Empire, — the barbarians who had begun their ravages, and the Paganism which existed both in and outside the Church. For which reasons he has been praised by most historians, in spite of great crimes and some vices. The worldly Gibbon admires him for the noble stand he took against external dangers, and the Fathers of the Church almost adored him for his zealous efforts in behalf of orthodoxy. An eminent scholar of the advanced school has seen nothing in him to admire, and much to blame. But he was undoubtedly a very great man, and rendered important services to his age and to civilization, although he could not arrest the fatal disease which even then had destroyed the vitality of the Empire. It was already doomed when he ascended the throne. No mortal genius, no imperial power, could have saved the crumbling Empire.

In my lecture on Marcus Aurelius I alluded to the external prosperity and internal weakness of the old Roman world during his reign. That outward prosperity continued for a century after he was dead,—that is, there were peace, thrift, art, wealth, and splendor. Men were unmolested in the pursuit of pleasure. There were no great wars with enemies beyond the limits of the Empire. There were wars of course ; but these chiefly were civil wars between rival aspirants for imperial

power, or to suppress rebellions, which did not alarm the people. They still sat under their own vines and fig-trees, and danced to voluptuous music, and rejoiced in the glory of their palaces. They feasted and married and were given in marriage, like the antediluvians. They never dreamed that a great catastrophe was near, that great calamities were impending.

I do not say that the people in that century were happy or contented, or even generally prosperous. How could they be happy or prosperous when monsters and tyrants sat on the throne of Augustus and Trajan? How could they be contented when there was such a vast inequality of condition, — when slaves were more numerous than freemen, — when most of the women were guarded and oppressed, — when scarcely a man felt secure of the virtue of his wife, or a wife of the fidelity of her husband, — when there was no relief from corroding sorrows but in the sports of the amphitheatre and circus, or some form of demoralizing excitement or public spectacle, — when the great mass were ground down by poverty and insult, and the few who were rich and favored were satiated with pleasure, ennuéd, and broken down by dissipation, — when there was no hope in this world or in the next, no true consolation in sickness or in misfortune, except among the Christians, who fled by thousands to desert places to escape the contaminating vices of society?

But if the people were not happy or fortunate as a general thing, they anticipated no overwhelming calamities; the outward signs of prosperity remained, — all the glories of art, all the wonders of imperial and senatorial magnificence; the people were fed and amused at the expense of the State; the colosseum was still daily crowded with its eighty-seven thousand spectators, and large hogs were still roasted whole at senatorial banquets, and wines were still drunk which had been stored one hundred years. The “dark-skinned daughters of Isis” still sported unmolested in wanton mien with the priests of Cybele in their discordant cries. The streets still were filled with the worshippers of Bacchus and Venus, with barbaric captives and their Teuton priests, with chariots and horses, with richly apparelled young men, and fashionable ladies in quest of new perfumes. The various places of amusement were still thronged with giddy youth and gouty old men who would have felt insulted had any one told them that the most precious thing they had was the most neglected. Everywhere, as in the time of Trajan, were unrestricted pleasures and unrestricted trades. What cared the shopkeepers and the carpenters and the bakers whether a Commodus or a Severus reigned? They were safe. It was only great nobles who were in danger of being robbed or killed by grasping emperors. The people, on the whole, lived for one hun-

dred years after the accession of Commodus as they did under Trajan and Marcus Aurelius. True, there had been great calamities during this hundred years. There had been terrible plagues and pestilences: in some of these as many as five thousand people died daily in Rome alone. There were tumults and revolts; there were wars and massacres; there was often the reign of monsters or idiots. Yet even as late as the reign of Aurelian, ninety years after the death of Aurelius, the Empire was thought to be eternal; nor was any triumph ever celebrated with greater pride and magnificence than his. And as the victorious emperor in his triumphal chariot marched along the Via Sacra up the Capitoline hill, with the spoils and trophies of one hundred battles, with ambassadors and captives, including Zenobia herself, fainting with the weight of jewels and golden fetters, it would seem that Rome was destined to overcome all the vicissitudes of Nature, and reign as mistress of the world forever.

But that century did not close until real dangers stared the people in the face, and so alarmed the guardians of the Empire that they no longer could retire to their secluded villas for luxurious leisure, but were forced to perpetual warfare, and with foes they had hitherto despised.

Two things marked the one hundred years before the accession of Theodosius of especial historical importance,

—the successful inroads of barbarians carrying desolation and alarm to the very heart of the Empire; and the wonderful spread of the Christian religion. Persecution ended with Diocletian; and under Constantine Christianity seated herself upon his throne. During this century of barbaric spoliations and public miseries, — the desolation of provinces, the sack of cities, the ruin of works of art, the burning of palaces, all the unnumbered evils which universal war created, — the converts to Christianity increased, for Christianity alone held out hope amid despair and ruin. The public dangers were so great that only successful generals were allowed to wear the imperial purple.

The ablest men of the Empire were at last summoned to govern it. From the year 268 to 394 most of the emperors were able men, and some were great and virtuous. Perhaps the Empire was never more ably administered than was the Roman in the day of its calamities. Aurelian, Diocletian, Constantine, Theodosius, are alike immortal. They all alike fought with the same enemies, and contended with the same evils. The enemies were the Gothic barbarians; the evils were the degeneracy and vices of Roman soldiers, which universal corruption had at last produced. It was a sad hour in the old capital of the world when its blinded inhabitants were aroused from the stupendous delusion that they were invincible; when the crushing fact

blazed upon them that the legions had been beaten, that province after province had been overrun, that the proudest cities had fallen, that the barbarians were advancing, — everywhere advancing, — treading beneath their feet temples, palaces, statues, libraries, priceless works of art; that there was no shelter to which they could fly; that Rome herself was doomed. In the year 378 the Emperor Valens himself was slain, almost under the walls of his capital, with two-thirds of his army, — some sixty thousand infantry and six thousand cavalry, — while the victorious Goths, gorged with spoils, advanced to take possession of the defeated and crumbling Empire. From the shores of the Bosphorus to the Julian Alps nothing was seen but conflagration, murders, and depredations, and the cry of anguish went up to heaven in accents of almost universal despair.

In such a crisis a great man was imperatively needed, and a great man arose. The dismayed emperor cast his eyes over the whole extent of his dominions to find a deliverer. And he found the needed hero living quietly and in modest retirement on a farm in Spain. This man was Theodosius the Great, a young man then, — as modest as David amid the pastures, as unambitious as Cincinnatus at the plough. “The vulgar,” says Gibbon, “gazed with admiration on the manly beauty of his

face and the graceful majesty of his person, while in the qualities of his mind and heart intelligent observers perceived the blended excellences of Trajan and Constantine." As prudent as Fabius, as persevering as Alfred, as comprehensive as Charlemagne, as full of resources as Frederic II., no more fitting person could be found to wield the sceptre of Trajan his ancestor. No greater man than he did the Empire then contain, and Gratian was wise and fortunate in associating with himself so illustrious a man in the imperial dignity.

If Theodosius was unassuming, he was not obscure and unimportant. His father had been a successful general in Britain and Africa, and he himself had been instructed by his father in the art of war, and had served under him with distinction. As Duke of Mæsia he had vanquished an army of Sarmatians, saved the province, deserved the love of his soldiers, and provoked the envy of the court. But his father having incurred the jealousy of Gratian and been unjustly executed, he was allowed to retire to his patrimonial estates near Valladolid, where he gave himself up to rural enjoyments and ennobling studies. He was not long permitted to remain in this retirement; for the public dangers demanded the service of the ablest general in the Empire, and there was no one so illustrious as he. And how lofty must have been his character, if Gratian

dared to associate with himself in the government of the Empire a man whose father he had unjustly executed! He was thirty-three when he was invested with imperial purple and intrusted with the conduct of the Gothic war.

The Goths, who under Fritigern had defeated the Roman army before the walls of Adrianople, were Germanic barbarians who lived between the Rhine and the Vistula in those forests which now form the empire of Germany. They belonged to a family of nations which had the same natural characteristics, — love of independence, passion for war, veneration for women, and religious tendency of mind. They were brave, persevering, bold, hardy, and virtuous, for barbarians. They cast their eyes on the Roman provinces in the time of Marius, and were defeated by him under the name of Teutons. They had recovered strength when Cæsar conquered the Gauls. They were very formidable in the time of Marcus Aurelius, and had formed a general union for the invasion of the Roman world. But a barrier had been made against their incursions by those good and warlike emperors who preceded Commodus, so that the Romans had peace for one hundred years. These barbarians went under different names, which I will not enumerate, — different tribes of the same Germanic family, whose remote ancestors lived in Central Asia and were kindred to the Medes and Persians.

Like the early inhabitants of Greece and Italy, they were of the Aryan race. All the members of this great family, in their early history, had the same virtues and vices. They worshipped the forces of Nature, recognizing behind these a supreme and superintending deity, whose wrath they sought to deprecate by sacrifices. They set a great value on personal independence, and hence had great individuality of character. They delighted in the pleasures of the chase. They were generally temperate and chaste. They were superstitious, social, and quarrelsome, bent on conquest, and migrated from country to country with a view of improving their fortunes.

The Goths were the first of these barbarians who signally triumphed over the Roman arms. "Starting from their home in the Scandinavian peninsula, they pressed upon the Slavic population of the Vistula, and by rapid conquests established themselves in southern and eastern Germany. Here they divided. The Visi or West Goths advanced to the Danube." In the reign of Decius (249-251) they crossed the river and ravaged the Roman territory. In 269 they imposed a tribute on the Emperor Gratian, and seem to have been settled in Dacia. After this they made several successful raids, — invading Bythinia, entering the Propontis, and advancing as far as Athens and Corinth, even to the coasts of Asia Minor; destroying in their ravages

the Temple of Diana at Ephesus, with its one hundred and twenty-seven marble columns.

These calamities happened in the middle of the third century, during the reign of the frivolous Gallienus, who received the news with his accustomed indifference. While the Goths were burning the Grecian cities, this royal cook and gardener was soliciting a place in the Areopagus of Athens.

In the reign of Claudius the barbarians united under the Gothic standard, and in six thousand vessels prepared again to ravage the world. Against three hundred and twenty thousand of these Goths Claudius advanced, and defeated them at Naissus in Dalmatia. Fifty thousand were slain, and three Gothic women fell to the share of every soldier. On the return of spring nothing of that mighty host was seen. Aurelian — who succeeded Claudius, and whose father had been a peasant of Sir-mium — put an end to the Gothic war, and the Empire again breathed; but only for a time. for the barbarians continually advanced, although they were continually beaten by the warlike emperors who succeeded Gallienus. In the middle of the third century they were firmly settled in Dacia, by permission of Valerian. One hundred years after, pressed by Huns, they asked for lands south of the Danube, which request was granted by Valens; but they were rudely treated by the Roman officials, especially their women, and treach-

ery was added to their other wrongs. Filled with indignation, they made a combination and swept everything before them, — plundering cities, and sparing neither age nor sex. These ravages continued for a year. Valens, aroused, advanced against them, and was slain in the memorable battle on the plains of Adrianople, 9th of August, 378, — the most disastrous since the battle of Cannæ, and from which the Empire never recovered.

To save the crumbling world, Theodosius was now made associate emperor. And in that great crisis prudence was more necessary than valor. No Roman army at that time could contend openly in the field, face to face, with the conquering hordes who assembled under the standard of Fritigern, — the first historic name among the Visigoths. Theodosius “fixed his headquarters at Thessalonica, from whence he could watch the irregular actions of the barbarians and direct the movements of his lieutenants.” He strengthened his defences and fortifications, from which his soldiers made frequent sallies, — as Alfred did against the Danes, — and accustomed themselves to the warfare of their most dangerous enemies. He pursued the same policy that Fabius did after the battle of Cannæ, to whose wisdom the Romans perhaps were more indebted for their ultimate success than to the brilliant exploits of Scipio. The death of Fritigern, the great predecessor

of Alaric, relieved Theodosius from many anxieties; for it was followed by the dissension and discord of the barbarians themselves, by improvidence and disorderly movements; and when the Goths were once more united under Athanaric, Theodosius succeeded in making an honorable treaty with him, and in entertaining him with princely hospitalities in his capital, whose glories alike astonished and bewildered him. Temperance was not one of the virtues of Gothic kings under strong temptation, and Athanaric, yielding to the force of banquets and imperial seductions, soon after died. The politic emperor gave his late guest a magnificent funeral, and erected to his memory a stately monument; which won the favor of the Goths, and for a time converted them to allies. In four years the entire capitulation of the Visigoths was effected.

Theodosius then turned his attention to the Ostro or East Goths, who advanced, with other barbarians, to the banks of the lower Danube, on the Thracian frontier. Allured to cross the river in the night, the barbarians found a triple line of Roman war-vessels chained to each other in the middle of the river, which offered an effectual resistance to their six thousand canoes, and they perished with their king.

Having gradually vanquished the most dangerous enemies of the Empire, Theodosius has been censured for allowing them to settle in the provinces they had

desolated, and still more for incorporating fifty thousand of their warriors in the imperial armies, since they were secret enemies, and would burst through their limits whenever an opportunity offered. But they were really too formidable to be driven back beyond the frontiers of the crumbling Empire. Theodosius could only procure a period of peace; and this was not to be secured save by adroit flatteries. The day was past for the extermination of the Goths by Roman soldiers, who had already thrown away their defensive armor; nor was it possible that they would amalgamate with the people of the Empire, as the Celtic barbarians had done in Spain and Gaul after the victories of Cæsar. Though the kingly power was taken away from them and they fought bravely under the imperial standards, it was evident from their insolence and their contempt of the effeminate masters that the day was not distant when they would be the conquerors of the Empire. It does not speak well for an empire that it is held together by the virtues and abilities of a single man. Nor could the fate of the Roman empire be doubtful when barbarians were allowed to settle in its provinces; for after the death of Valens the Goths never abandoned the Roman territory. They took possession of Thrace, as Saxons and Danes took possession of England.

After the conciliation of the Goths, — for we cannot call it the conquest, — Theodosius was obliged to turn

his attention to the affairs of the Western Empire; for he ruled only the Eastern provinces. It would seem that Gratian, who had called him to his assistance to preserve the East from the barbarians, was now in trouble in the West. He had not fulfilled the great expectation that had been formed of him. He degraded himself in the eyes of the Romans by his absorbing passion for the pleasures of the chase, while public affairs imperatively demanded his attention. He received a body of Alans into the military and domestic service of the palace. He was indolent and pleasure-seeking, but was awakened from his inglorious sports by a revolt in Britain. Maximus, a native of Spain and governor of the island, had been proclaimed emperor by his soldiers. He invaded Gaul with a large fleet and army, followed by the youth of Britain, and was received with acclamations by the armies of that province. Gratian, then residing in Paris, fled to Lyons, deserted by his troops, and was assassinated by the orders of Maximus. The usurper was now acknowledged by the Western provinces as emperor, and was too powerful to be resisted at that time by Theodosius, who accepted his ambassadors, and made a treaty with the usurper by which he was permitted to reign over Britain, Gaul, and Spain, provided that the other Western provinces, including Wales, should accept and acknowledge Valentinian, the brother of the murdered

Gratian, who was however a mere boy, and was ruled by his mother Justina, an Arian, — that celebrated woman who quarrelled with Ambrose, archbishop of Milan. Valentinian was even more feeble than Gratian, and Maximus, not contented with the sovereignty of the three most important provinces of the Empire, resolved to reign over the entire West. Theodosius, who had dissembled his anger and waited for opportunity, now advanced to the relief of Valentinian, who had been obliged to fly from Milan, — the seat of his power. But in two months Theodosius subdued his rival, who fled to Italy, only, however, to be dragged from the throne and executed.

Having terminated the civil war, and after a short residence in Milan, Theodosius made his triumphal entry into the ancient capital of the world. He was now the absolute and undisputed master of the East and the West, as Constantine had been, whom he resembled in his military genius and executive ability; but he gave to Valentinian (a youth of twenty, murdered a few months after) the provinces of Italy and Illyria, and intrusted Gaul to the care of Arbogastes, — a gallant soldier among the Franks, who, like Maximus, aspired to reign. But power was dearer to the valiant Frank than a name; and he made his creature, the rhetorician Eugenius, the nominal emperor of the West. Hence another civil war; but this more serious than the last, and for which

Theodosius was obliged to make two years' preparation. The contest was desperate. Victory at one time seemed even to be on the side of Arbogastes: Theodosius was obliged to retire to the hills on the confines of Italy, apparently subdued, when, in the utmost extremity of danger, a desertion of troops from the army of the triumphant barbarian again gave him the advantage, and the bloody and desperate battle on the banks of the Frigidus re-established Theodosius as the supreme ruler of the world. Both Arbogastes and Eugenius were slain, and the East and West were once more and for the last time united. The division of the Empire under Diocletian had not proved a wise policy, but was perhaps necessary; since only a Hercules could have borne the burdens of undivided sovereignty in an age of turbulence, treason, revolts, and anarchies. It was probably much easier for Tiberius or Trajan to rule the whole world than for one of the later emperors to rule a province. Alfred had a harder task than Charlemagne, and Queen Elizabeth than Queen Victoria.

I have dwelt very briefly on those contests in which the great Theodosius was obliged to fight for his crown and for the Empire. For a time he had delivered the citizens from the fear of the Goths, and had re-established the imperial sovereignty over the various provinces. But only for a time. The external dangers

reappeared at his death. He only averted impending ruin; he only propped up a crumbling Empire. No human genius could have long prevented the fall. Hence his struggles with barbarians and with rebels have no deep interest to us. We associate with his reign something more important than these outward conflicts. Civilization at large owes him a great debt for labors in another field, for which he is most truly immortal,—for which his name is treasured by the Church,—for which he was one of the great benefactors.

These labors were directed to the improvement of jurisprudence, and the final extinction of Paganism as a tolerated religion. He gave to the Church and to Christianity a new prestige. He rooted out, so far as genius and authority can, those heresies which were rapidly assimilating the new religion to the old. He was the friend and patron of those great ecclesiastics whose names are consecrated. The great Ambrose was his special friend, in whose arms he expired. Augustine, Martin of Tours, Jerome, Gregory Nazianzen, Basil, Chrysostom, Damasus, were all contemporaries, or nearly so. In his day the Church was really seated on the high-places of the earth. A bishop was a greater man than a senator; he exercised more influence and had more dignity than a general. He was ambassador, courtier, and statesman, as well as prelate. Theodosius handed

over to the Church the government of mankind. To him we date that ecclesiastical government which was perfected by Charlemagne, and which was dominant in the Middle Ages. Anarchy and misery spread over the world; but the new barbaric forces were obedient to the officers of the Church. The Church looms up in the days of Theodosius as the great power of the world.

Theodosius is lauded as a Christian prince even more than Constantine, and as much as Alfred. He was what is called orthodox, and intensely so. He saw in Arianism a heresy fatal to the Church. "It is our pleasure," said he, "that all nations should steadfastly adhere to the religion which was taught by Saint Peter to the Romans, which is *the sole Deity of the Father, the Son, and Holy Ghost*, under an equal majesty; and we authorize the followers of this doctrine to assume the title of Catholic Christians." If Rome under Damasus and the teachings of Jerome was the seat of orthodoxy, Constantinople was the headquarters of Arianism. We in our times have no conception of the interest which all classes took in the metaphysics of theology. Said one of the writers of the day: "If you desire a man to change a piece of silver, he informs you wherein the Son differs from the Father; if you ask the price of a loaf, you are told in reply that the Son is inferior to the Father; if you inquire whether the bath is ready:

the answer is that the Son was made out of nothing." The subtle questions pertaining to the Trinity were the theme of universal conversation, even amid the calamities of the times.

Theodosius, as soon as he had finished his campaign against the Goths, summoned the Arian archbishop of Constantinople, and demanded his subscription to the Nicene Creed or his resignation. It must be remembered that the Arians were in an overwhelming majority in the city, and occupied the principal churches. They complained of the injustice of removing their metropolitan, but the emperor was inflexible; and Gregory Nazianzen, the friend of Basil, was promoted to the vacant See, in the midst of popular grief and rage. Six weeks afterwards Theodosius expelled from all the churches of his dominions, both of bishops and of presbyters, those who would not subscribe to the Nicene Creed. It was a great reformation, but effected without bloodshed.

Moreover, in the year 381 he assembled a general council of one hundred and fifty bishops at his capital, to finish the work of the Council of Nice, and in which Arianism was condemned. In the space of fifteen years seven imperial edicts were fulminated against those who maintained that the Son was inferior to the Father. A fine equal to two thousand dollars was imposed on every person who should receive or promote

an Arian ordination. The Arians were forbidden to assemble together in their churches, and by a sort of civil excommunication they were branded with infamy by the magistrates, and rendered incapable of civil offices of trust and emolument. Capital punishment even was inflicted on Manicheans.

So it would appear that Theodosius inaugurated religious persecution for honest opinions, and his edicts were similar in spirit to those of Louis XIV. against the Protestants, — a great flaw in his character, but for which he is lauded by the Catholic historians. The eloquent Fléchier enlarges enthusiastically on the virtues of his private life, on his chastity, his temperance, his friendship, his magnanimity, as well as his zeal in extinguishing heresy. But for him, Arianism might possibly have been the established religion of the Empire, since not only the dialectical Greeks, but the sensuous Goths, inclined to that creed. Ulfilas, in his conversion of those barbarians, had made them the supporters of Arianism, not because *they* understood the subtle distinctions which theologians had made, but because it was the accepted and fashionable faith of Constantinople. Spain, however, through the commanding influence of Hosius, adhered to the doctrines of Athanasius, while the eloquence of the commanding intellects of the age was put forth in behalf of Trinitarianism. The great leader of Arianism had passed away when Augustine dictated to

the Christian world from the little town of Hippo, and Jerome transplanted the monasticism of the East into the West. At Tours Martin defended the same cause that Augustine had espoused in Africa; while at Milan, the court capital of the West, the venerable Ambrose confirmed Italy in the Latin creed. In Alexandria the fierce Theophilus suppressed Arianism with the same weapons that he had used in extirpating the worship of Isis and Osiris. Chrysostom at Antioch was the equally strenuous advocate of the Athanasian Creed. We are struck with the appearance of these commanding intellects in the last days of the Empire, — not statesmen and generals, but ecclesiastics and churchmen, generally agreed in the interpretation of the faith as declared by Paul, and through whose counsels the emperor was unquestionably governed. In all matters of religion Theodosius was simply the instrument of the great prelates of the age, — the only great men that the age produced.

After Theodosius had thus established the Nicene faith, so far as imperial authority, in conjunction with that of the great prelates, could do so, he closed the final contest with Paganism itself. His laws against Pagan sacrifices were severe. It was death to inspect the entrails of victims for sacrifice; and all other sacrifices, in the year 392, were made a capital offence. He even demolished the Pagan temples, as the Scots destroyed the abbeys and convents which were the great

monuments of Mediæval piety. The revenues of the temples were confiscated. Among the great works of ancient art which were destroyed, but might have been left or converted into Christian use, were the magnificent temple of Edessa and the serapis of Alexandria, uniting the colossal grandeur of Egyptian with the graceful harmony of Grecian art. At Rome not only was the property of the temples confiscated, but also all privileges of the priesthood. The Vestal virgins passed unhonored in the streets. Whoever permitted any Pagan rite—even the hanging of a chaplet on a tree—forfeited his estate. The temples of Rome were not destroyed, as in Syria and Egypt; but as all their revenues were confiscated, public worship declined before the superior pomps and pageantry of a very formal Christianity. The Theodosian code, published by Theodosius the Younger, A. D. 438, while it incorporated Christian usages and laws in the legislation of the Empire, did not, however, disturb the relation of master and slave; and when the Empire fell, slavery still continued as it was in the times of Augustus and Diocletian. Nor did Christianity elevate imperial despotism into a wise and beneficent rule. It did not change perceptibly the habits of the aristocracy. The most vivid picture we have of the vices of the leading classes of Roman society are painted by a contemporaneous Pagan historian,—Ammianus Marcellinus.

and many a Christian matron adorned herself with the false and colored hair, the ornaments, the rouge, and the silks of the Pagan women of the time of Cleopatra. Never was luxury more enervating, or magnificence more gorgeous, but without refinement, than in the generation that preceded the fall of Rome. And coexistent with the vices which prepared the way for the conquests of the barbarians was the wealth of the Christian clergy, who vied with the expiring Paganism in the splendor of their churches, in the ornaments of their altars, and in the imposing ceremonial of their worship. The bishop became a great worldly potentate, and the strictest union was formed between the Church and State. The greatest beneficent change which the Church effected was in relation to divorce,—the facility for which disgraced the old Pagan civilization; but Christianity invested marriage with the utmost solemnity, so that it became a holy and indissoluble sacrament,—to which the Catholic Church, in the days of deepest degeneracy has ever clung, leaving to the Protestants the restoration of this old Pagan custom of divorce, as well as the encouragement and laudation of a material civilization.

The spirit of Paganism never has been exorcised in any age of Christian progress and triumph, but has appeared from time to time in new forms. In the conquering Church of Constantine and Theodosius it

adopted Pagan emblems and gorgeous rites and ceremonies; in the Middle Ages it appeared in the dialectical contests of the Greek philosophers; in our times in the deification of the reason, in the apotheosis of art, in the inordinate value placed on the enjoyments of the body, and in the splendor of an outside life. Names are nothing. To-day we are swinging to the Epicurean side of the Greeks and Romans as completely as they did in the age of Commodus and Aurelian; and none may dare to hurl their indignant protests without meeting a neglect and obloquy sometimes more hard to bear than the persecutions of Nero, of Trajan, of Leo X., of Louis XIV.

If Theodosius were considered aside from his able administration of the Empire and his patronage of the orthodox leaders of the Church, he would be subject to severe criticism. He was indolent, irascible, and severe. His name and memory are stained by a great crime, — the slaughter of from seven to fifteen thousand of the people of Thessalonica, — one of the great crimes of history, but memorable for his repentance more than for his cruelty. Had Theodosius not submitted to excommunication and penance, and given every sign of grief and penitence for this terrible deed, he would have passed down in history as one of the cruellest of all the emperors, from Nero downwards; for nothing can excuse, or even palliate, so gigantic a crime, which shocked the whole

civilized world,—a crime more inexcusable than the slaughter of Saint Bartholomew or the massacre which followed the revocation of the edict of Nantes.

Theodosius survived that massacre about five years, and died at Milan, 395, at the age of fifty, from a disease which was caused by the fatigues of war, which, with a constitution undermined by self-indulgence, he was unable to bear. But whatever the cause of his death it was universally lamented, not from love of him so much as from the sense of public dangers which he alone had the power to ward off. At his death his Empire was divided between his two feeble sons, — Honorius and Arcadius, and the general ruin which everybody began to fear soon took place. After Theodosius, no great and war-like sovereign reigned over the crumbling and dismembered Empire, and the ruin was as rapid as it was mournful.

The Goths, released from the restraints and fears which Theodosius imposed, renewed their ravages; and the effeminate soldiers of the Empire, who formerly had marched with a burden of eighty pounds, now threw away the heavy weapons of their ancestors, even their defensive armor, and of course made but feeble resistance. The barbarians advanced from conquering to conquer. Alaric, leader of the Goths, invaded Greece at the head of a numerous army. Degenerate soldiers guarded the pass where three hundred Spartan heroes

had once arrested the Persian hosts, and fled as Alaric approached. Even at Thermopylæ no resistance was made. The country was laid waste with fire and sword. Athens purchased her preservation at an enormous ransom. Corinth, Argos, and Sparta yielded without a blow, but did not escape the doom of vanquished cities. Their palaces were burned, their families were enslaved, and their works of art were destroyed.

Only one general remained to the desponding Arcadius,—Stilicho, trained in the armies of Theodosius, who had virtually intrusted to him, although by birth a Vandal, the guardianship of his children. We see in these latter days of the Empire that the best generals were of barbaric birth,—an impressive commentary on the degeneracy of the legions. At the approach of Stilicho, Alaric retired at first, but collecting a force of ten thousand men penetrated the Julian Alps, and advanced into Italy. The Emperor Honorius was obliged to summon to his rescue his dispirited legions from every quarter, even from the fortresses of the Rhine and the Caledonian wall, with which Stilicho compelled Alaric to retire, but only on a subsidy of two tons of gold. The Roman people, supposing that they were delivered, returned to their circuses and gladiatorial shows. Yet Italy was only temporarily delivered, for Stilicho,—the hero of Pollentia,—with the collected forces of the whole western Empire, might still have defied the

armies of the Goths and staved off the ruin another generation, had not imperial jealousy and the voice of envy removed him from command. The supreme guardian of the western Empire, in the greatest crisis of its history, himself removes the last hope of Rome. The frivolous senate which Stilicho had saved, and the weak and timid emperor whom he guarded, were alike demented. *Quos Deus vult perdere, prius dementat.* In an evil hour the brave general was assassinated.

The Gothic king observing the revolutions at the palace, the elevation of incompetent generals, and the general security in which the people indulged, resolved to march to a renewed attack. Again he crossed the Alps, with a still greater army, and invaded Italy, destroying everything in his path. Without obstruction he crossed the Apennines, ravaged the fertile plains of Umbria, and reached the city, which for four hundred years had not been violated by the presence of a foreign enemy. The walls were then twenty-five miles in circuit, and contained so large a population that it affected indifference. Alaric made no attempt to take the city by storm, but quietly and patiently enclosed it with a cordon through which nothing could force its way,—as the Prussians in our day invested Paris. The city, unprovided for a siege, soon felt all the evils of famine, to which pestilence was naturally added. In despair, the haughty citizens condescended

to sue for a ransom. Alaric fixed the price of his retreat at the surrender of all the gold and silver, all the precious movables, and all the slaves of barbaric birth. He afterwards somewhat modified his demands, but marched away with more spoil than the Romans brought from Carthage and Antioch.

Honorius intrenched himself at Ravenna, and refused to treat with the magnanimous Alaric. Again, consequently, he marched against the doomed capital; again invested it; again cut off supplies. In vain did the nobles organize a defence,—there were no defenders. Slaves would not fight, and a degenerate rabble could not resist a warlike and superior race. Cowardice and treachery opened the gates. In the dead of night the Gothic trumpets rang unanswered in the streets. The old heroic virtues were gone. No resistance was made. Nobody fought from temples and palaces. The queen of the world, for five days and nights, was exposed to the lust and cupidity of despised barbarians. Yet a general slaughter was not made; and as much wealth as could be collected into the churches of St. Peter and St. Paul was spared. The superstitious barbarians in some degree respected churches. But the spoils of the city were immense and incalculable,—gold, jewels, vestments, statues, vases, silver plate, precious furniture, spoils of Oriental cities,—the collective treasures of the world,—all were piled

upon the Gothic wagons. The sons and daughters of patrician families became, in their turn, slaves to the barbarians. Fugitives thronged the shores of Syria and Egypt, begging daily bread. The Roman world was filled with grief and consternation. Its proud capital was sacked, since no one would defend it. "The Empire fell," says Guizot, "because no one belonged to it." The news of the capture "made the tongue of old Saint Jerome to cling to the roof of his mouth in his cell at Bethlehem. What is now to be seen," cried he, "but conflagration, slaughter, ruin, — the universal shipwreck of society?" The same words of despair came from Saint Augustine at Hippo. Both had seen the city in the height of its material grandeur, and now it was laid low and desolate. The end of all things seemed to be at hand; and the only consolation of the great churchmen of the age was the belief in the second coming of our Lord.

The sack of Rome by Alaric, A. D. 410, was followed in less than half a century by a second capture and a second spoliation at the hands of the Vandals, with Genseric at their head, — a tribe of barbarians of kindred Germanic race, but fiercer instincts and more hideous peculiarities. This time, the inhabitants of Rome (for Alaric had not destroyed it, — only robbed it) put on no airs of indifference or defiance. They knew their weakness. They begged for mercy.

The last hope of the city was her Christian bishop; and the great Leo, who was to Rome what Augustine had been to Carthage when that capital also fell into the hands of Vandals, hastened to the barbarian's camp. The only concession he could get was that the lives of the people should be spared, — a promise only partially kept. The second pillage lasted fourteen days and nights. The Vandals transferred to their ships all that the Goths had left, even to the trophies of the churches and ancient temples; the statues which ornamented the capital, the holy vessels of the Jewish temple which Titus had brought from Jerusalem, imperial sideboards of massive silver, the jewels of senatorial families, with their wives and daughters, — all were carried away to Carthage, the seat of the new Empire of the Vandals, A. D. 455, then once more a flourishing city. The haughty capital met the fate which she had inflicted on her rival in the days of Cato the censor, but fell still more ingloriously, and never would have recovered from this second fall had not her immortal bishop, rising with the greatness of the crisis, laid the foundation of a new power, — that spiritual domination which controlled the Gothic nations for more than a thousand years.

With the fall of Rome, — yet too great a city to be wholly despoiled or ruined, and which has remained even to this day the centre of what is most interesting

in the world, — I should close this Lecture ; but I must glance rapidly over the whole Empire, and show its condition when the imperial capital was spoiled, humiliated, and deserted.

The Suevi, Alans, and Vandals invaded Spain, and erected their barbaric monarchies. The Goths were established in the south of Gaul, while the north was occupied by the Franks and Burgundians. England, abandoned by the Romans, was invaded by the Saxons, who formed permanent conquests. In Italy there were Goths and Heruli and Lombards. All these races were Germanic. They probably made serfs or slaves of the old population, or were incorporated with them. They became the new rulers of the devastated provinces ; and all became, sooner or later, converts to a nominal Christianity, the supreme guardian of which was the Pope, whose authority they all recognized. The languages which sprang up in Europe were a blending of the Roman, Celtic, and Germanic. In Spain and Italy the Latin predominated, as the Saxon prevailed in England after the Norman conquest. Of all the new settlers in the Roman world, the Normans, who made no great incursions till the time of Charlemagne, were probably the strongest and most refined. But they all alike had the same national traits, substantially ; and they entered upon the possessions of the Romans after various contests, more or less successful, for two hundred and fifty years.

The Empire might have been invaded by these barbarians in the time of the Antonines, and perhaps earlier; but it would not have succumbed to them. The Legions were then severely disciplined, the central power was established, and the seeds of ruin had not then brought forth their wretched fruits. But in the fifth century nothing could have saved the Empire. Its decline had been rapid for two hundred years, until at last it became as weak as the Oriental monarchies which Alexander subdued. It fell like a decayed and rotten tree. As a political State all vitality had fled from it. The only remaining conservative forces came from Christianity; and Christianity was itself corrupted, and had become a part of the institutions of the State.

It is mournful to think that a brilliant external civilization was so feeble to arrest both decay and ruin. It is sad to think that neither art nor literature nor law had conservative strength; that the manners and habits of the people grew worse and worse, as is universally admitted, amid all the glories and triumphs and boastings of the proudest works of man. "A world as fair and as glorious as our own," says Sismondi, "was permitted to perish." Rome, Alexandria, Antioch, Athens, met the old fate of Babylon, of Tyre, of Carthage. Degeneracy was as marked and rapid in the former, notwithstanding all the civilizing influences of letters, jurisprudence, arts, and utilitarian science, as in the latter

nations, — a most significant and impressive commentary on the uniform destinies of nations, when those virtues on which the strength of man is based have passed away. An observer in the days of Theodosius would very likely have seen the churches of Rome as fully attended as are those in New York itself to-day; and he would have seen a more magnificent city, — and yet it fell. There is no cure for a corrupt and rotten civilization. As the farms of the old Puritans of Massachusetts and Connecticut are gradually but surely passing into the hands of the Irish, because the sons and grandsons of the old New-England farmer prefer the uncertainties and excitements of a demoralized city-life to laborious and honest work, so the possessions of the Romans passed into the hands of German barbarians, who were strong and healthy and religious. They desolated, but they reconstructed.

The punishment of the enervated and sensual Roman was by war. We in America do not fear this calamity, and have no present cause of fear, because we have not sunk to the weakness and wickedness of the Romans, and because we have no powerful external enemies. But if amid our magnificent triumphs of science and art, we should accept the Epicureanism of the ancients and fall into their ways of life, then there would be the same decline which marked them, — I mean in virtue and public morality. — and there would be the same penalty; not

perhaps destruction from external enemies, as in Persia, Syria, Greece, and Rome, but some grievous and unexpected series of catastrophes which would be as mournful, as humiliating, as ruinous, as were the incursions of the Germanic races. The operations of law, natural and moral, are uniform. No individual and no nation can escape its penalty. The world will not be destroyed; Christianity will not prove a failure,—but new forces will arise over the old, and prevail. Great changes will come. He whose right it is to rule will overturn and overturn: but “creation shall succeed destruction; melodious birth-songs will come from the fires of the burning phoenix,” assuring us that the progress of the race is certain, even if nations are doomed to a decline and fall whenever conservative forces are not strong enough to resist the torrent of selfishness, vanity, and sin.

AUTHORITIES.

THE original authorities are Ammianus Marcellinus, Zosimus, Sozomen, Socrates, orations of Gregory Nazianzen, Theodoret, the Theodosian Code, Sulpicius Severus, Life of Martin of Tours, Life of Ambrose by Paulinus, Augustine's “*De Civitate Dei*,” Epistles of Ambrose; also those of Jerome; Claudien. The best modern authorities are Tillemont's History of the Emperors; Gibbon's Decline and Fall; Milmans's History of Christianity; Neander; Sheppard's Fall of Rome; and Fléclier's Life of Theodosius. There are several popular Lives of Theodosius in French, but very few in English.

LEO THE GREAT.

A. D. 390-461.

FOUNDATION OF THE PAPACY.

LEO THE GREAT.

FOUNDATION OF THE PAPACY.

WITH the great man who forms the subject of this Lecture are identified those principles which lay at the foundation of the Roman Catholic power for fifteen hundred years. I do not say that he is the founder of the Roman Catholic Church, for that is another question. Roman Catholicism, as a polity, or government, or institution, is one thing; and Roman Catholicism, as a religion, is quite another, although they have been often confounded. As a government, or polity, it is peculiar,—the result of the experience of ages, adapted to society and nations in a certain state of progress or development, with evils and corruptions, of course, like all other human institutions. As a religion, although it superadded many dogmas and rites which Protestants do not accept, and for which they can see no divine authority,—like auricular confession, the adoration of the Virgin, remission of sin, and

the infallibility of the Pope, — still, it has at the same time defended the cardinal principles of Christian faith and morality; such as the personality and sovereignty of God, the divinity of Christ, salvation in consequence of his sufferings and death, immortality, the final judgment, the necessity of a holy life, temperance, humility, patience, and the virtues which were taught upon the Mount and enforced by the original disciples and apostles, whose writings are accepted as inspired.

In treating so important a subject as that represented by Leo the Great, we must bear in mind these distinctions. While Leo is conceded to have been a devout Christian and a noble defender of the faith as we receive it, — one of the lights of the early Christian Church, numbered even among the Fathers of the Church, with Augustine and Chrysostom, — his special claim to greatness is that to him we trace some of the first great developments of the Roman Catholic power as an institution. More than any other one man, he laid the foundation-stone of that edifice which alike sheltered and imprisoned the European nations for more than a thousand years. He was not a great theologian like Augustine, or preacher like Chrysostom, but he was a great bishop like Ambrose, — even far greater, inasmuch as he was the organizer of new forces in the administration of his important diocese. In fact he was a great statesman, as the more able of the popes

always aspired to be. He was the associate and equal of princes.

It was the sublime effort of Leo to make the Church the guardian of spiritual principles and give to it a theocratic character and aim, which links his name with the mightiest moral movements of the world; and when I speak of the Church I mean the Church of Rome, as presided over by men who claimed to be the successors of Saint Peter,—to whom they assert Christ had given the supreme control over all other churches as His vicars on the earth. It was the great object of Leo to substantiate this claim, and root it in the minds of the newly converted barbarians; and then institute laws and measures which should make his authority and that of his successors paramount in all spiritual matters, thus centring in his See the general oversight of the Christian Church in all the countries of Europe. It was a theocratic aspiration, one of the grandest that ever entered into the mind of a man of genius, yet, as Protestants now look at it, a usurpation,—the beginning of a vast system of spiritual tyranny in order to control the minds and consciences of men. It took several centuries to develop this system, after Leo was dead. With him it was not a vulgar greed of power, but an inspiration of genius,—a grand idea to make the Church which he controlled a benign and potent influence on society, and to prevent civilization from being

utterly crushed out by the victorious Goths and Vandals. It is the success of this idea which stamps the Church as the great leading power of Mediæval Ages, — a power alike majestic and venerable, benignant yet despotic, humble yet arrogant and usurping.

But before I can present this subtile contradiction, in all its mighty consequences both for good and evil, I must allude to the Roman See and the condition of society when Leo began his memorable pontificate as the precursor of the Gregories and the Clements of later times. Like all great powers, it was very gradually developed. It was as long in reaching its culminating greatness as that temporal empire which controlled the ancient world. Pagan Rome extended her sway by generals and armies; Mediæval Rome, by her prelates and her principles.

However humble the origin of the Church of Rome, in the early part of the fifth century it was doubtless the greatest See (or *seat* of episcopal power) in Christendom. The Bishop of Rome had the largest number of dependent bishops, and was the first of clerical dignitaries. As early as A. D. 250, — sixty years before Constantine's conversion, and during the times of persecution, — such a man as Cyprian, metropolitan Bishop of Carthage, yielded to him the precedence, and possibly the presidency, because his See was the world's metrop-

olis. And when the seat of empire was removed to the banks of the Bosphorus, the power of the Roman Bishop, instead of being diminished, was rather increased, since he was more independent of the emperors than was the Bishop of Constantinople. And especially after Rome was taken by the Goths, he alone possessed the attributes of sovereignty. "He had already towered as far above ordinary bishops in magnificence and prestige as Cæsar had above Fabricius."

It was the great name of ROME, after all, which was the mysterious talisman that elevated the Bishop of Rome above other metropolitans. Who can estimate the moral power of that glorious name which had awed the world for a thousand years? Even to barbarians that proud capital was sacred. The whole world believed her to be eternal; she alone had the prestige of universal dominion. This queen of cities might be desolated like Babylon or Tyre, but her influence was indestructible. In her very ruins she was majestic. Her laws, her literature, and her language still were the pride of nations; they revered her as the mother of civilization, clung to the remembrance of her glories, and refused to let her die. She was to the barbarians what Athens had been to the Romans, what modern Paris is to the world of fashion, what London ever will be to the people of America and Australia, — the centre of a proud civilization. So the bishops of such a city were

great in spite of themselves, no matter whether they were remarkable as individuals or not. They were the occupants of a great office; and while their city ruled the world, it was not necessary for them to put forth any new claims to dignity or power. No person and no city disputed their pre-eminence. They lived in a marble palace; they were clothed in purple and fine linen; they were surrounded by sycophants; nobles and generals waited in their ante-chambers; they were the companions of princes; they controlled enormous revenues; they were the successors of the high pontiffs of imperial domination.

Yet for three hundred years few of them were eminent. It is not the order of Providence that great posts, to which men are elected by inferiors, should be filled with great men. Such are always feared, and have numerous enemies who defeat their elevation. Moreover, it is only in crises of imminent danger that signal abilities are demanded. Men are preferred for exalted stations who will do no harm, who have talent rather than genius, — men who have business capacities, who have industry and modesty and agreeable manners; who, if noted for anything, are noted for their character. Hence we do not read of more than two or three bishops, for three hundred years, who stood out pre-eminently among their contemporaries; and these were inferior to Origen, who was a teacher in a theological school,

and to Jerome, who was a monk in an obscure village. Even Augustine, to whose authority in theology the Catholic Church still professes to bow down, as the schools of the Middle Ages did to Aristotle, was the bishop of an unimportant See in Northern Africa. Only Clement in the first century, and Innocent in the fourth loomed up above their contemporaries. As for the rest, great as was their dignity as bishops, it is absurd to attribute to them schemes for enthralling the world. No such plans arose in the bosom of any of them. Even Leo I. merely prepared the way for universal domination; he had no such deep-laid schemes as Gregory VII. or Boniface VIII. The primacy of the Bishop of Rome was quite generally conceded by other bishops for four hundred years, and this was emphasized by the grandeur of his capital. This however was disputed by the Bishop of Constantinople, and continued to be until that capital was taken by the Turks.

But with the waning power, glory, and wealth of Rome, — decimated, pillaged, trodden under foot by Goths and Vandals, rebuked by Providence, deserted by emperors, abandoned to decay and ruin, — some expedient or new claim to precedency was demanded to prevent the Roman bishops from sinking into mediocrity. It was at this crisis that the pontificate of Leo began, in the year 440. It was a gloomy period,

not only for Rome, but for civilization. The queen of cities had been repeatedly sacked, and her treasures destroyed or removed to distant cities. Her proud citizens had been sold as slaves; her noble matrons had been violated; her grand palaces had been levelled with the ground; her august senators were fugitives and exiles. All kinds of calamities overspread the earth and decimated the race,—war, pestilence, and famine. Men in despair hid themselves in caves and monasteries. Literature and art were crushed; no great works of genius appeared. The paralysis of despair deadened all the energies of civilized man. Even armies lost their vigor, and citizens refused to enlist. The old mechanism of the Cæsars, which had kept the Empire together for three hundred years after all vitality had fled, was worn out. The general demoralization had led to a general destruction. Vice was succeeded by universal violence; and that, by universal ruin. Old laws and restraints were no longer of any account. A civilization based on material forces and Pagan arts had proved a failure. The whole world appeared to be on the eve of dissolution. To the thoughtful men of the age everything seemed to be involved in one terrific mass of desolation and horror. “Even Jerome,” says a great historian, “heaped together the awful passages of the Old Testament on the capture of Jerusalem and other Eastern cities; and the noble lines of Virgil on the sack

of Troy are but feeble descriptions of the night which covered the western Empire."

Now Leo was the man for such a crisis, and seems to have been raised up to devise some new principle of conservation around which the stricken world might rally. "He stood equally alone and superior," says Milman, "in the Christian world. All that survived of Rome — of her unbounded ambition, of her inflexible will, and of her belief in her title to universal dominion — seemed concentrated in him alone."

Leo was born, in the latter part of the fourth century, at Rome, of noble parents, and was intensely Roman in all his aspirations. He early gave indications of future greatness, and was consecrated to a service in which only talent was appreciated. When he was nothing but an acolyte, whose duty it was to light the lamps and attend on the bishop, he was sent to Africa and honored with the confidence of the great Bishop of Hippo. And he was only deacon when he was sent by the Emperor Valentinian III. to heal the division between Aëtius and Albinus, — rival generals, whose dissensions compromised the safety of the Empire. He was absent on important missions when the death of Sixtus, A. D. 440, left the Papacy without a head. On Leo were all eyes now fixed, and he was immediately summoned by the clergy and the people of Rome, in

whom the right of election was vested, to take possession of the vacant throne. He did not affect unworthiness like Gregory in later years, but accepted at once the immense responsibility.

I need not enumerate his measures and acts. Like all great and patriotic statesmen he selected the wisest and ablest men he could find as subordinates, and condescended himself to those details which he inexorably exacted from others. He even mounted the neglected pulpit of his metropolitan church to preach to the people, like Chrysostom and Gregory Nazianzen at Constantinople. His sermons are not models of eloquence or style, but are practical, powerful, earnest, and orthodox. Athanasius himself was not more evangelical, or Ambrose more impressive. He was the especial foe of all the heresies which characterized the age. He did battle with all who attempted to subvert the Nicene Creed. Those whom he especially rebuked were the Manicheans, — men who made the greatest pretension to intellectual culture and advanced knowledge, and yet whose lives were disgraced not merely by the most offensive intellectual pride, but the most disgraceful vices; men who confounded all the principles of moral obligation, and who polluted even the atmosphere of Rome by downright Pagan licentiousness. He had no patience with these false philosophers, and he had no mercy. He even complained of them to the emperor.

as Calvin did of Servetus to the civil authorities of Geneva (which I grant was not to his credit); and the result was that these dissolute and pretentious heretics were expelled from the army and from all places of trust and emolument.

Many people in our enlightened times would denounce this treatment as illiberal and persecuting, and justly. But consider his age and circumstances. What was Leo to do as the guardian of the faith in those dreadful times? Was he to suffer those who poisoned all the sources of renovation which then remained to go unbuked and unpunished? He may have said, in his defence, "Shall I, the bishop of this diocese, the appointed guardian of faith and morals in a period of alarming degeneracy, — shall I, armed with the sword of Saint Peter, stop to draw the line between injuries inflicted by the tongue and injuries inflicted by the hand? Shall we defend our persons, our property, and our lives, and take no notice of those who impiously and deliberately would destroy our souls by their envenomed blasphemies? Shall we allow the wells of water which spring up to everlasting life to be poisoned by the impious atheists and scoffers, who in every age set themselves up against Christ and His kingdom, and are only allowed by God Almighty to live, as the wild beasts of the desert or scorpions and serpents are allowed to live? Let them live, but let us defend ourselves against their teeth and

fangs. Are the overseers of God's people, in a world of shame, to be mere philosophical Gallios, indifferent to our higher interests? Is it a Christian duty to permit an avalanche of evils to overwhelm the Church on the plea of toleration? Shall we suffer, when we have the power to prevent it, a pandemonium of scoffers and infidels and sentimental casuists to run riot in the city which is intrusted to us to guard? Not thus will we be disloyal to our trusts. Men have souls to save, and we will come to the rescue with any weapons we can lay our hands upon. The Church is the only hope of the world, not merely in our unsettled times, but for all ages. And hence I, as the guardian of those spiritual principles which lie at the root of all healthy progress in civilization, and all religious life, will not tamely and ignobly see those principles subverted by dangerous and infidel speculations, even if they are attractive to cultivated but irreligious classes."

Such may have been the arguments, it is not unreasonable to suppose, which influenced the great Leo in his undoubted persecutions,—persecutions, we should remember, which were then indorsed by the Catholic Church. They would be condemned in our times by all enlightened men, but they were the only remedy known in that age against dangerous opinions. So Leo put down the Manicheans and preserved the unity of the faith, which was of immeasurable importance in the sea

of anarchies which at that time was submerging all the traditions of the past.

Leo also distinguished himself by writing a treatise on the Incarnation, — said to be the ablest which has come down to us from the primitive Church. He was one of those men who believed in theology as a series of divine declarations, to be cordially received whether they are fully grasped by the intellect or not. These declarations pertain to most momentous interests, and hence transcend in dignity any question which mere philosophy ever attempted to grasp, or physical science ever brought forward. In spite of the sneers of the infidels, or the attacks of *savans*, or the temporary triumph of false opinions, let us remember they have endured during the mighty conflicts of the last eighteen hundred years, and will endure through all the conflicts of ages, — the might, the majesty, and the glory of the kingdom of Christ. Whoever thus conserves truths so important is a great benefactor, whether neglected or derided, whether despised or persecuted.

In addition to the labors of Leo to preserve the integrity of the received faith among the semi-barbaric western nations, his efforts were equally great to heal the disorders of the Church. He reformed ecclesiastical discipline in Africa, rent by Arian factions and Donatist schismatics. He curtailed the abuses of metropolitan tyranny in Gaul. He sent his legates to preside over the

councils of Ephesus and Chalcedon. He sat in judgment between Vienna and Arles. He fought for the independence of the Church against emperors and barbaric chieftains. He encouraged literature and missions and schools and the spread of the Bible. He was the paragon of a bishop, — a man of transcendent dignity of character, as well as a Father of the Church Universal, of whom all Christendom should be proud.

Among Leo's memorable acts as one of the great lights of his age was the part he was called upon to perform as a powerful intercessor with barbaric kings. When Attila with his swarm of Mongol conquerors appeared in Italy, — the "scourge of God," as he was called; the instrument of Providence in punishing the degenerate rulers and people of the falling Empire, — Leo was sent by the affrighted emperor to the barbarian's camp to make what terms he could. The savage Hun, who feared not the armies of the emperor, stood awe-struck, we are told, before the minister of God; and, swayed by his eloquence and personal dignity, consented to retire from Italy for the hand of the princess Honoria. And when afterwards Genseric, at the head of his Vandals, became master of the capital, he was likewise influenced by the powerful intercession of the bishop, and consented to spare the lives of the Romans, and preserve the public buildings and churches from conflagration. Genseric could not yield up the spoil of the fallen capital, and his

soldiers transported to Carthage, the seat of the new Vandal kingdom, the riches and trophies which illustrious generals had won, — yea, the treasures of three religions; the gods of the capitoline temple, the golden candlesticks which Titus brought from Jerusalem, and the sacred vessels which adorned the churches of the Christians, and which Alaric had spared.

Thus far the intrepid bishop of Rome — for he was courageous — calls forth our sympathy and admiration for the hand he had in establishing the faith and healing the divisions of the Church, for which he earned the title of Saint. He taught no errors like Origen, and pushed out no theological doctrines into a jargon of metaphysics like Athanasius. He was more practical than Jerome, and more moderate than Augustine.

But he established a claim, from motives of policy, which subsequently ripened into an irresistible government, on which the papal structure as an institution or polity rests. He did not put forth this claim, however, until the old capital of the Cæsars was humiliated, vanquished, and completely prostrated as a political power. When the Eternal City was taken a second time, and her riches plundered, and her proud palaces levelled with the dust; when her amphitheatre was deserted, her senatorial families were driven away as fugitives and sold as slaves, and her glory was departed, — nothing left her but recollections and broken columns

and ruined temples and weeping matrons, ashes, groans, and lamentations, miseries and most bitter sorrows,—then did her great bishop, intrepid amid general despair, lay the foundation of a new empire, vaster in its influence, if not in its power, than that which raised itself up among the nations in the proudest days of Vespasian and the Antonines.

Leo, from one of the devastated hills of Rome,—once crowned with palaces, temples, and monuments,—looked out upon the Christian world, and saw the desolation spoken of by Jeremy the prophet, as well as by the Cumæan sibyl: all central power hopelessly prostrated; law and justice by-words; provinces wasted, decimated, and anarchical; literature and art crushed; vice, in all its hateful deformity, rampant and multiplying itself; false opinions gaining ground; Christians adopting the errors of Paganism; soldiers turned into banditti; the contemplative hiding themselves in caves and deserts; the rich made slaves; barbarians everywhere triumphant; women shrieking in terror; bishops praying in despair,—a world disordered, a pandemonium of devils let loose, one terrific and howling mass of moral and physical desolation such as had never been seen since Noah entered into the ark.

Amid this dreary wreck of the old civilization, which had been supposed to be eternal, what were Leo's designs and thoughts? In this mournful crisis, what did

he dream of in his sad and afflicted soul? To flee into a monastery, as good men in general despair and wretchedness did, and patiently wait for the coming of his Lord, and for the new dispensation? Not at all: he contemplated the restoration of the eternal city, — a new creation which should succeed destruction; the foundation of a new power which should restore law, preserve literature, subdue the barbarians, introduce a still higher civilization than that which had perished, — not by bringing back the Cæsars, but by making himself Cæsar; a revived central power which the nations should respect and obey. That which the world needed was this new central power, to settle difficulties, depose tyrants, establish a common standard of faith and worship, encourage struggling genius, and conserve peace. Who but the Church could do this? The Church was the last hope of the fallen Empire. The Church should put forth her theocratic aspirations. The keys of Saint Peter should be more potent than the sceptres of kings. The Church should not be crushed in the general desolation. She was still the mighty power of the world. Christianity had taken hold of the hearts and minds of men, and raised its voice to console and encourage amid universal despair. Men's thoughts were turned to God and to his vicegerents. He was mighty to save. His promises were a glorious consolation. The Church should arise, put on her beautiful garments,

and go on from conquering to conquer. A theocracy should restore civilization. The world wanted a new Christian sovereign, reigning by divine right, not by armies, not by force, — by an appeal to the future fears and hopes of men. Force had failed: it was divided against itself. Barbaric chieftains defied the emperors and all temporal powers. Rival generals desolated provinces. The world was plunging into barbarism. The imperial sceptre was broken. Not a diadem, but a tiara, must be the emblem of universal sovereignty. Not imperial decrees, but papal bulls, must now rule the world. Who but the Bishop of Rome could wear this tiara? Who but he could be the representative of the new theocracy? He was the bishop of the metropolis whose empire never could pass away. But his city was in ruins. If his claim to precedency rested on the grandeur of his capital, he must yield to the Bishop of Constantinople. He must found a new claim, not on the greatness and antiquity of his capital, but on the superstitious veneration of the Christian world, — a claim which would be accepted.

It is true that several of Leo's predecessors had instituted such a claim, which he would revive and enforce with new energy. Innocent had maintained, forty years before Leo, that the primacy of the Roman See was derived from Saint Peter, — that Christ had delegated to Peter supreme power as chief of the apostles;

and that he, as the successor of Saint Peter, was entitled to his jurisdiction and privileges. This is the famous *jus divinum* principle which constitutes the corner-stone of the papal fabric. On this claim was based the subsequent encroachments of the popes. Leo saw the force of this claim, and adopted it and intrenched himself behind it, and became forthwith more formidable than any of his predecessors or any living bishop; and he was sure that so long as the claim was allowed, no matter whether his city was great or small, his successors would become the spiritual dictators of Christendom. The dignity and power of the Roman bishop were now based on a firm foundation. He was still venerable from the souvenirs of the Empire, but more potent as the successor of the chief of the apostles. Ambrose had successfully asserted the independent spiritual power of the bishops; Leo seized that sceptre and claimed it for the Bishop of Rome.

Protestants are surprised and indignant that this haughty and false claim (as they view it) should have been allowed; it only shows to what depth of superstition the Christian world had already sunk. They accept the Gospels as the source of Christian history and spiritual law. Where, say they, are the proofs that Saint Peter was really the first bishop of Rome, even? And if he were, where are the Scripture proofs that he had precedence over the other

apostles? And more, where do we learn in the Scriptures that any prerogative could be transmitted to successors? Where do we find that the successors of Peter were entitled to jurisdiction over the whole Church? Christ, it is true, makes use of the expression of a "rock" on which his Church should be built. But Christ himself is the rock, not a mortal man. "Other foundation can no man lay than that is laid, which is Jesus Christ,"—a truth reiterated even by Saint Augustine, the great and acknowledged theologian of the Catholic Church, although Augustine's views of sin and depravity are no more relished by the Roman Catholics of our day than the doctrines of Luther himself, who drew his theological system, like Calvin, from Augustine more than from any other man, except Saint Paul.

But unfounded as Protestants deem Leo's claim—that Peter, not Christ, was the rock on which the Church is founded,—it was generally accepted by the bishops of the day. Everything tended to confirm it, especially the universal idea of a necessary unity of the Church. There must be a head of the Church on earth, and who could be lawfully that head other than the successor of the apostle to whom Christ had given the keys of heaven and hell?

But this claim, considering the age when it was first enforced, had the inspiration of genius. It was most

opportune. The Bishop of Rome would soon have been reduced to the condition of other metropolitans had his dignity rested on the greatness of his capital. He now became the interpreter of his own decrees, — an arch-pontiff ruling by divine right. His power became indefinite and unlimited. Just in proportion to the depth of the religious sentiment of the newly converted barbarians would be his ascendancy over them; and the Germanic races were religious peoples like the early Greeks and Romans. Tacitus points out this sentiment of religion as one of their leading characteristics. It was not the worship of ancestors, as among the Aryan races until Grecian and Roman civilization was developed. It was more like the worship of the invisible powers of Nature; for in the rock, the mountain, the river, the forest, the sun, the stars, the storms, the rude Teutonic mind saw a protecting or avenging deity. They easily transferred to the Christian clergy the reverence they had bestowed on the old priests of Odin, of Freya, and of Thor. Reverence was one of the great sentiments of our German ancestors. It was only among such a people that an overpowering spiritual despotism could be maintained. The Pope became to them the vicegerent of the great Power which they adored. The records of the race do not show such another absorbing pietism as was seen in the monastic retreats of the Middle Ages, except among the Brah-

mans and Buddhists of India. This religious fervor the popes were to make use of, to extend their empire.

And that nothing might be wanted to cement their power which had been thus assured, the Emperor Valentinian III. — a monarch controlled by Leo — passed in the year 445 this celebrated decree :—

“The primacy of the Apostolic See having been established by the merit of Saint Peter, its founder, the sacred Council of Nice, and the dignity of the city of Rome, we thus declare our irrevocable edict, that all bishops, whether in Gaul or elsewhere, shall make no innovation without the sanction of the Bishop of Rome ; and, that the Apostolic See may remain inviolable, all bishops who shall refuse to appear before the tribunal of the Bishop of Rome, when cited, shall be constrained to appear by the governor of the province.

Thus firmly was the Papacy rooted in the middle of the fifth century, not only by the encroachments of bishops, but by the authority of emperors. The papal dominion begins, as an institution, with Leo the Great. As a religion it began when Paul and Peter preached at Rome. Its institution was peculiar and unique ; a great spiritual government usurping the attributes of other governments, as predicted by Daniel, and, at first benignant, ripening into a stern tyranny,—a tyranny so universal and far reaching as to become finally, in the eyes of Luther, an evil power. As a religion, as I

have said, it did not widely depart from the primitive creeds until it added to the doctrines generally accepted by the Church, and even still by Protestants, those other dogmas which were means to an end, — that end the possession of power and its perpetuation. Yet these dogmas, false as we Protestants deem them, never succeeded in obscuring wholly the truths which are taught in the gospel, or in extinguishing faith in the world. In all the encroachments of the Papacy, in all the triumphs of an unauthorized Church polity, the flame of true Christian piety has been dimmed, but not extinguished. And when this fatal and ambitious polity shall have passed away before the advance of reason and civilization, as other governments have been overturned, the lamp of piety will yet burn, as in other churches, since it will be fed by the Bible and the Providence of God. Governments and institutions pass away, but not religions; certainly not the truths originally declared among the mountains of Judea, which thus far have proved the elevation of nations.

It is then the government, not the religion, which Leo inaugurated, with which we have to do. And let us remember in reference to this government, which became so powerful and absolute, that Leo only laid the foundation. He probably did not dream of subjecting the princes of the earth except in matters which pertained to his supremacy as a spiritual ruler. His aim

was doubtless spiritual, not temporal. He had no such deep designs as Hildebrand and Innocent III. cherished. The encroachments of later ages he did not anticipate. His doctrine was, "Render unto Cæsar the things which are Cæsar's, and unto God the things which are God's." As the vicegerent of the Almighty, which he felt himself to be in spiritual matters, he would institute a guardianship over everything connected with religion, even education, which can never be properly divorced from it. He was the patron of schools, as he was of monasteries. He could advise kings: he could not impose upon them his commands (except in Church matters), as Boniface VIII. sought to do. He would organize a network of Church functionaries, not of State officers; for he was the head of a great religious institution. He would send his legates to the end of the earth to superintend the work of the Church, and rebuke princes, and protest against wars; for he had the religious oversight of Christendom.

Now when we consider that there was no central power in Europe at this time, that the barbaric princes were engaged in endless wars, and that a fearful gloom was settling upon everything pertaining to education and peace and order; that even the clergy were ignorant, and the people superstitious; that everything was in confusion, tending to a worse confusion, to perfect anarchy and barbaric license; that provincial

councils were no longer held ; that bishops and abbots were abdicating their noblest functions, — we feel that the spiritual supremacy which Leo aimed to establish had many things to be said in its support ; that his central rule was a necessity of the times, keeping civilization from utter ruin.

In the first place, what a great idea it was to preserve the unity of the Church, — the idea of Cyprian and Augustine and all the great Fathers, — an idea never exploded, and one which we even in these times accept, though not in the sense understood by the Roman Catholics ! We cannot conceive of the Church as established by the apostles, without recognizing the necessity of unity in doctrines and discipline. Who in that age could conserve this unity unless it were a great spiritual monarch ? In our age books, universities, theological seminaries, the press, councils, and an enlightened clergy can see that no harm comes to the great republic which recognizes Christ as the invisible head. Not so fifteen hundred years ago. The idea of unity could only be realized by the exercise of sufficient power in one man to preserve the integrity of the orthodox faith, since ignorance and anarchy covered the earth with their funereal shades.

The Protestants are justly indignant in view of subsequent encroachments and tyrannies. But these were not the fault of Leo. Everything good in its day is

likely to be perverted. The whole history of society is the history of the perversion of institutions originally beneficent. Take the great foundations for education and other moral and intellectual necessities, which were established in the Middle Ages by good men. See how these are perverted and misused even in such glorious universities as Oxford and Cambridge. See how soon the primitive institutions of apostles were changed, in order to facilitate external conquests and make the Church a dignified worldly power. Not only are we to remember that everything good has been perverted, and ever will be, but that all governments, religious and civil, seem to be, in one sense, expediciencies, — that is, adapted to the necessities and circumstances of the times. In the Bible there are no settled laws definitely laid down for the future government of the Church, — certainly not for the government of States and cities. A government which was best for the primitive Christians of the first two centuries was not adapted to the condition of the Church in the third and fourth centuries, else there would not have been bishops. If we take a narrow-minded and partisan view of bishops, we might say that they always have existed since the times of the apostles; the Episcopalians might affirm that the early churches were presided over by bishops, and the Presbyterians that every ordained minister was a bishop, — that elder and bishop are synonymous. But that is

a contest about words, not things. In reality, episcopal power, as we understand it, was not historically developed till there was a large increase in the Christian communities, especially in great cities, where several presbyters were needed, one of whom presided over the rest. Some such episcopal institution, I am willing to concede, was a necessity, although I cannot clearly see the divine authority for it. In like manner other changes became necessary, which did not militate against the welfare of the Church, but tended to preserve it. New dignities, new organizations, new institutions for the government of the Church successively arose. All societies must have a government. This is a law recognized in the nature of things. So Christian society must be organized and ruled according to the necessities of the times; and the Scriptures do not say what these shall be, — they are imperative and definite only in matters of faith and morals. To guard the faith, to purify the morals according to the Christian standard, overseers, officers, rulers are required. In the early Church they were all brethren. The second and third century made bishops. The next age made archbishops and metropolitans and patriarchs. The age which succeeded was the age of Leo; and the calamities and miseries and anarchies and ignorance of the times, especially the rule of barbarians, seemed to point to a monarchical head, a more theocratic government, — a

government so august and sacred that it could not be resisted.

And there can be but little doubt that this was the best government for the times. Let me illustrate by civil governments. There is no law laid down in the Bible for these. In the time of our Saviour the world was governed by a universal monarch. The imperial rule had become a necessity. It was tyrannical; but Paul as well as Christ exhorted his followers to accept it. In process of time, when the Empire fell, every old province had a king, — indeed there were several kings in France, as well as in Germany and Spain. The prelates of the Church never lifted up their voice against the legality of this feudo-kingly rule. Then came a revolt, after the Reformation, against the government of kings. New England and other colonies became small republics, almost democracies. On the hills of New England, with a sparse rural population and small cities, the most primitive form of government was the best. It was virtually the government of townships. The selectmen were the overseers; and, following the necessities of the times, the ministers of the gospel were generally Independents or Congregationalists, not clergy of the Established Church of Old England. Both the civil and the religious governments which they had were the best for the people. But what was suited to Massachusetts would not be fit for England or France. See how our

government has insensibly drifted towards a strong central power. What must be the future necessities of such great cities as New York, Philadelphia, and Chicago,—where even now self-government is a failure, and the real government is in the hands of rings of politicians, backed by foreign immigrants and a lawless democracy? Will the wise, the virtuous, and the rich put up forever with such misrule as these cities have had, especially since the Civil War? And even if other institutions should gradually be changed, to which we now cling with patriotic zeal, it may be for the better and not the worse. Those institutions are the best which best preserve the morals and liberties of the people; and such institutions will gradually arise as the country needs, unless there shall be a general shipwreck of laws, morals, and faith, which I do not believe will come. It is for the preservation of these laws, morals, and doctrines that all governments are held responsible. A change in the government is nothing; a decline of morals and faith is everything.

I make these remarks in order that we may see that the rise of a great central power in the hands of the Bishop of Rome, in the fifth century, may have been a great public benefit, perhaps a necessity. It became corrupt; it forgot its mission. Then it was attacked by Luther. It ceased to rule England and a part of Germany and other countries where there were higher pub-

lic morals and a purer religious faith. Some fear that the rule of the Roman Church will be re-established in this country. Never,—only its religion. The Catholic Church may plant her prelates in every great city, and the whole country may be regarded by them as missionary ground for the re-establishment of the papal polity. But if ever this polity should seek to subvert the other established institutions of the country or govern the use of the Bible in schools, it would be controlled by the majority of our people through Constitutional means. Its religion will remain,—may gain new adherents, become the religion of vast multitudes. But it is not the faith which the Roman Catholic Church professes to conserve which I fear. That is very much like that of Protestants, in the main. It is the institutions, the polity, the government of that Church which I speak of, with its varied means of gaining power, its opposition to the free circulation of the Bible, its interference with popular education, its prelatical assumptions, its professed allegiance to a foreign potentate, though as wise and beneficent as Pío Nono or the reigning Pope.

In the time of Leo there were none of these things. It was a poor, miserable, ignorant, anarchical, superstitious age. In such an age the concentration of power in the hands of an intelligent man is always a public benefit. Certainly it was wielded wisely by Leo, and for

beneficent ends. He established the patristic literature. The writings of the great Fathers were by him scattered over Europe, and were studied by the clergy, so far as they were able to study anything. All the great doctrines of Augustine and Jerome and Athanasius were defended. The whole Church was made to take the side of orthodoxy, and it remained orthodox to the times of Bernard and Anselm. Order was restored to the monasteries; and they so rapidly gained the respect of princes and good men that they were richly endowed, and provision made in them for the education of priests. Everywhere cathedral schools were established. The canon law supplanted in a measure the old customs of the German forests and the rude legislation of feudal chieftains. When bishops quarrelled with monasteries or with one another, or even with barons, appeals were sent to Rome, and justice was decreed. In after times these appeals were settled on venal principles, but not for centuries. The early Mediæval popes were the defenders of justice and equity. And they promoted peace among quarrelsome barons, as well as Christian truth among divines. They set aside, to some extent, those irascible and controversial councils where good and great men were persecuted for heresy. These popes had no small passions to gratify or to stimulate. They were the conservators of the peace of Europe, as all reliable historians testify. They were generally very

enlightened men, — the ablest of their times. They established canons and laws which were based on wisdom, which stood the test of ages, and which became venerable precedents.

The Catholic polity was only gradually established, sustained by experience and reason. And that is the reason why it has been so permanent. It was most admirably adapted to rule the ignorant in ages of cruelty and crime, — and, I am inclined to think, to rule the ignorant and superstitious everywhere. Great critics are unanimous in their praises of that wonderful mechanism which ruled the world for one thousand years.

Nor did the popes, for several centuries after Leo, grasp the temporal powers of princes. As political monarchs they were at first poor and insignificant. The Papacy was not politically a great power until the time of Hildebrand, nor a rich temporal power till nearly the era of the Reformation. It was a spiritual power chiefly, just such as it is destined to become again, — the organizer of religious forces; and, so far as these are animated by the gospel and reason, they are likely to have a perpetuated influence. Who can predict the end of a spiritual empire which shows no signs of decay? It is not half so corrupt as it was in the time of Boniface VIII., nor half so feeble as in the time of Leo X. It is more majestic and venerable than in the time of Luther. Nor are Protestants so bitter and one-sided as they were fifty

years ago. They begin to judge this great power by broader principles; to view it as it really is,—not as “Antichrist” and the “scarlet mother,” but as a venerable institution, with great abuses, having at heart the interests of those whom it grinds down and deceives.

But, after all, I do not in this Lecture present the Papacy of the eleventh century or the nineteenth, but the Papacy of the fifth century, as organized by Leo. True, its fundamental principles as a government are the same as then. These principles I do not admire, especially for an enlightened era. I only palliate them in reference to the wants of a dark and miserable age, and as a critic insist upon their notable success in the age that gave them birth.

With these remarks on the regimen, the polity, and the government of the Church of which Leo laid the foundation, and which he adapted to barbarous ages, when the Church was still a struggling power and Christianity itself little better than nominal,—long before it had much modified the laws or changed the morals of society; long before it had created a new civilization,—with these remarks, acceptable, it may be, neither to Catholics nor to Protestants, I turn once more to the man himself. Can you deny his title to the name of Great? Would you take him out of the galaxy of illustrious men whom we still call Fathers and Saints?

Even Gibbon praises his exalted character. What would the Church of the Middle Ages have been without such aims and aspirations? Oh, what a benevolent mission the Papacy performed in its best ages, mitigating the sorrows of the poor, raising the humble from degradation, opposing slavery and war, educating the ignorant, scattering the Word of God, heading off the dreadful tyranny of feudalism, elevating the learned to offices of trust, shielding the pious from the rapacity of barons, recognizing man as man, proclaiming Christian equalities, holding out the hopes of a future life to the penitent believer, and proclaiming the sovereignty of intelligence over the reign of brute forces and the rapacity of ungodly men! All this did Leo, and his immediate successors. And when he superadded to the functions of a great religious magistrate the virtues of the humblest Christian, — parting with his magnificent patrimony to feed the poor, and proclaiming (with an eloquence unusual in his time) the cardinal doctrines of the Christian faith, and setting himself as an example of the virtues which he preached, — we concede his claim to be numbered among the great benefactors of mankind. How much worse Roman Catholicism would have been but for his august example and authority! How much better to educate the ignorant people, who have souls to save, by the patristic than by heathen literature, with all its poison of false philosophies

and corrupting stimulants! Who, more than he and his immediate successors, taught loyalty to God as the universal Sovereign, and the virtues generated by a peaceful life, — patriotism, self-denial, and faith? He was a dictator only as Bernard was, ruling by the power of learning and sanctity. As an original administrative genius he was scarcely surpassed by Gregory VII. Above all, he sought to establish faith in the world. Reason had failed. The old civilization was a dismal mockery of the aspirations of man. The schools of Athens could make Sophists, rhetoricians, dialecticians, and sceptics. But the faith of the Fathers could bring philosophers to the foot of the Cross. What were material conquests to these conquests of the soul, to this spiritual reign of the invisible principles of the kingdom of Christ?

So, as the vicegerents of Almighty power, the popes began to reign. Ridicule not that potent domination. What lessons of human experience, what great truths of government, what principles of love and wisdom are interwoven with it! Its growth is more suggestive than the rise of any temporal empires. It has produced more illustrious men than any European monarchy. And it aimed to accomplish far grander ends, — even obedience to the eternal laws which God has decreed for the public and private lives of men. It is invested with more poetic interest. Its doctors, its dig-

nitaries, its saints, its heroes, its missions, and its laws rise up before us in sublime grandeur when seriously contemplated. It failed at last, when no longer needed. But it was not until its encroachments and corruptions shocked the reason of the world, and showed a painful contrast to those virtues which originally sustained it, that earnest men arose in indignation, and declared that this perverted institution should no longer be supported by the contributions of more enlightened ages; that it had become a tyrannical and dangerous government, to be assailed and broken up. It has not yet passed away. It has survived the Reformation and the attacks of its countless enemies. How long this power of blended good and evil will remain we cannot predict. But one thing we do know, — that the time will come when all governments shall become the kingdoms of our Lord and Saviour Jesus Christ; and Christian truth alone shall so permeate all human institutions that the forces of evil shall be driven forever into the immensity of eternal night.

Shortly after the Pontificate of Leo the Great the period we call the "Middle Ages" may be said to begin. The disintegration of society then was complete, and the reign of ignorance and superstition had set in. With the collapse of the old civilization a new power had become a necessity. If anything marked

the Middle Ages it was the reign of church and nobles. This reign it will be my object to present in the Lectures which are to fill the next volume of this Work, together with subjects closely connected with papal domination and feudal life.

AUTHORITIES.

WORKS of Leo, edited by Quesnel; Zosimus; Socrates; Theodoret; Fleury's Ecclesiastical History; Tillemont's *Histoire des Empereurs*; Gibbon's *Decline and Fall*; Beugot's *Histoire de la Destruction du Paganism*; Alexander de Saint Chéron's *Histoire du Pontificat de Saint Leo le Grande, et de son Siècle*; Dumoulin's *Vie et Religion de deux Papes Léon I. et Grégoire I.*; Maimbourg's *Histoire du Pontificat de Saint Léon*; Arendt's *Leo der Grosse und seine Zeit*; Butler's *Lives of the Saints*; Neander; Milman's *Latin Christianity*; *Biographie Universelle*; *Encyclopædia Britannica*. The Church historians universally praise this Pope.
